To DECHA'RM, *v. a.* [*decharmer*, Fr.] to counteract a charm.

To DECI'DE, *v. a.* [from *decido*, to cut off, Lat.] to put an end to, or determine a dispute or event.

DECI'DER, *s.* one who determines a quarrel or cause.

DECI'DUOUS, *a.* [*deciduus*, from *decido*, to fall down, Lat.] falling off. In botany, applied to the leaves, those which fall off at the approach of winter; to the cup or empalement falling off before the blossom, as in the cabbage, and cuckoo flower; and to the seed-vessel, falling off before it opens as in the sea-rocket, and woad.

DECI'DUOUSNESS, *s.* aptness to fall. In botany, the quality of fading or withering every year.

DE'CIMAL, *a.* [*decimus*, from *decem*, ten, Lat.] numbered, multiplied, or increasing by tens. *Decimal arithmetic* is that which computes by decimal fractions. A *decimal fraction* is that whose denominator is always one, with one or more ciphers; thus an unit may be imagined to be equally divided into ten parts, and each of these into ten more; so that by a continual decimal subdivision, the unit may be supposed to be divided into 10, 100, 1000, &c. equal parts. But denominators of this sort of fractions are always known; they are seldom expressed in writing; but the fraction is distinguished by a point placed before it thus .6 .46 869. for 6-10ths 46-100ths 869 1000ths. The same is observed in mixed numbers, as 678 .9 for 678 9-10ths 67 .89 for 67 89-100ths 6.789 for 6 789-1000ths, &c. And as cyphers placed after integers increase their valour decimally, so being placed before a decimal they decrease their value decimally; but being placed before integers and after fractions, neither of them is increased or diminished.

To DE'CIMATE, *v. a.* [*decimo*, from *decem*, ten, Lat.] to tithe; to take the tenth.

DECIMA'TION, *s.* [*decimatio*, from *decem*, ten, Lat.] the act of tithing, or taking the tenth, whether by lot or otherwise; a selection of every tenth soldier by lot, for punishment in a general mutiny.

DELHI, a province of Hindoostan, bounded on the W. by Moultan; on the N. W. by Lahore; on the E. by the countries of Thibet and Oude; and on the S. by Agra and Agimere. The natural fertility of the soil of this province, and the mildness of its climate, are such as to favour the most numerous population: yet, having been the seat of continual wars for more than 70 years past, it is almost depopulated; the lands lie waste, and the inhabitants provide only the bare means of subsistence, lest they should attract the notice of those whose trade is pillage. It is about 165 miles in length, and 140 in breadth. *Delhi*, the capital of the province of Delhi, was once a large, rich, and populous city, and the capital of the Mogul empire. But, in 1739, when Nadir Shaw, or Kouli Khan invaded Hindoostan, he entered Delhi, and dreadful were the massacres and calamities that followed: 200,000 of the inhabitants perished by the sword; and plunder, to the amount of 60,000,000*l.* sterling, was collected and carried away. They endured similar disasters on the subsequent invasions of Abdalla, king of Candahar; so that, since the decline and downfall of the Mogul empire, the population is extremely low. The late residence of the Mogul is a magnificent palace, built of red stone, about 1000 ells in length and 600 in breadth, and which cost 10,500,000 rupees. Lat. 28. 37. N. lon. 77. 40. E.

DE'NMARK, a kingdom of Europe, bounded on the W. by the ocean, on the N. and E. by the Baltic Sea, and on the S. by Germany and the Baltic. The country is generally flat, and the air is rendered foggy by the seas and lakes: but the weather being changeable, it is purified by frequent breezes. Denmark, properly so called, consists of Jutland and the island of Zealand and Funen, with the little isles about them: but the king of Denmark's dominions contain the kingdom of Norway, and the duchies of Holstein, Gottenburgh, and Delmenhorst, in Germany, besides Iceland, and the other Danish settlements abroad. The kingdom of Denmark was formerly elective, but since 1660 it was rendered hereditary even to the daughters, partly by consent, and partly by force; at which time the nobility lost most of their privileges. They have very few laws, and those are so plain that they have little need of lawyers, for causes are soon tried. They allow but one apothecary in a town, except at Copenhagen, where there are two. Their shops are visited by the physicians once a week, and all the po-

rished drugs are destroyed. The inhabitants are Protestants since the year 1522, when they embraced the confession of Augsburg. The forces which the king of Denmark has usually on foot are near 40,000, but most of them are in the pay of other princes. The revenues are computed at 1,400,000*l.* a year, which arise from the crown lands and duties, and the tolls paid by vessels passing between the Baltic and German Ocean. There is no large river in Denmark, but numerous lakes and channels of the sea, by which it is intersected. In the summer the heat is great, and the days are long; but the winter continues 7 or 8 months. The commodities are corn, pulse, horses, and large beeves, together with the produce of their manufactures. The exports exceed the imports to the amount of 55,000 crowns a year. Copenhagen is the capital.

DERBY, the county-town of Derbyshire, is large and well built, with a spacious market-place and handsome town-house. In 1734, a machine was erected here by Sir Thomas Lombe, for the manufacturing of silk, the model of which he brought from Italy. It was the first of its kind erected in England; and its operations are to wind, double, and twist the silk, so as to render it fit for weaving. Here are also manufactories of silk, cotton, and worsted stockings, and of elegant porcelain, which last is in high estimation. Derbyshire and foreign marbles are wrought here in vases, urns, columns, and other ornamental articles, and the lapidary and jewellery branches are executed with great neatness. The malting business, and a pottery of queen's earthenware, are also carried on here. The number of inhabitants in its five parishes is estimated a 8593. It is seated on the river Derwent, which is navigable to the Trent, 36 miles N. of Coventry, and 120 N. W. by N. of London. Markets on Wednesday and Friday.

DIVERS, *a.* [*diversus*, from *diverto*, to differ, Lat.] sundry; several; more than one. It is now out of use.

DIVERSE, *a.* [*diversus*, from *diverto*, to differ, Lat.] different in form or nature; various; in different directions, or contrary ways.

DIVERSELY, *ad.* in different ways, methods, or manners; in different directions, or towards different points.

DIVERSIFICATION, *s.* the act of changing forms or qualities; variation; a mixture of different colours; alteration.

To DIVERSIFY, *v. a.* [*diversifier*, Fr.] to make different from another, or from itself; to vary; to mark with various colours.

DIVERSION, *s.* the act of turning a thing aside from its course; something which unbends the mind, by taking it off from intense application or care; something lighter than amusement, and less forcible than pleasure; sport; the public exhibitation of shows, plays, operas, &c. which unbend the mind. In war, the act of drawing off an enemy from some design, by an attack made at some other place.

DIVERSITY, *s.* [*diversitas*, from *diversus*, different, Lat. *diversite*, Fr.] difference which distinguishes things from each other; variety; variegation, or a composition of different colours. SYNON. *Diversity* supposes a change which taste is always in search of, in order to discover some novelty that may enliven and delight it; *variety* supposes a plurality of things differing from each other in likeness, which cheers the imagination, apt to be clogged with too great an uniformity.

To DIVERT, *v. a.* [from *dis*, a particle, here signifying division, and *verto*, to turn Lat.] to turn aside from any direction or course; to seduce or turn aside from a rule of conduct. To please; or unbend the mind by public sports, or other things which afford pleasure. In war, to draw forces to a different part. Used by Shakespear in the sense of, to subvert: to destroy. SYNON. We are *gay* by disposition, *merry* through turn of mind, *diverting* by our way of acting. We should take care not to be *diverting* at the expense of our character.

DIVERTER, *s.* any thing that unbends the mind, and alleviates its fatigue.

DIVINERESS, *s.* a woman professing divination.

DIVING, *s.* the art or act of descending under water to considerable depths, and abiding there a competent time. Diving is used in the fishing for pearls, corals, spunges, &c. and machines have been invented for the purpose, as the diving-bell, &c

DIVING-BELL, *s.* a machine contrived to remedy the inconveniences that attend remaining under water. They have been constructed in several different ways. That which is exhibited in the plate was invented by Dr Halley. His diving bell was of wood, three feet wide at top, five feet wide at bottom, and eight feet high, coated with lead to make it sink readily, and having a particular weight distributed about its bottom, to make it retain a perpendicular position. In the upper part was fixed a strong, clear glass, to serve as a window, with a turn-cock to let out the hot air, lower down was a circular seat for the divers to set on, and below, about a yard under the bell, was a stage suspended from it by three ropes, each charged with an hundred weight to keep it steady, and for the divers to stand upon to do their work. The machine was suspended from the mast of a ship by a sprit, which was secured by stays to the mast-head, and was directed by braces to carry it over-board, clear of the side of the ship, and to bring it in again. Fresh air was sent down to the divers in barrels coated with lead, each having a bung hole at bottom to let in the water as they descended, and let it out again as they were drawn up. In the top of the barrels was another hole, to which was fixed a leather pipe, long enough to hang below the bung hole, and kept down by a weight, so that the air driven to the upper part of the barrel by the encroachment of the water in the descent, could not escape up this pipe unless the lower end were lifted up. These air barrels were filled with tackle, which guided them to the bell, so that the ends of the pipes came readily to the hand of a man placed on the stage to receive them, and who taking up the ends of the pipes as soon as they came above the surface of the water in the barrels, all the air which was included in the barrels was forced into the bell. With this apparatus Dr. Halley, with four other persons, was able to remain for an hour and a half at the depth of nine fathoms, where he enjoyed sufficient light when the sea was clear, to be able to read and write.

DIVINITY, *s.* [*divinitas*, from *Deus*, God, Lat.] a partaking of the nature and excellence of God; Godhead. Figuratively, God, the supreme Being, the Creator and Preserver of all things; a false deity or idol. The science conversant about God, heavenly things, and the duties we more immediately owe to him; something supernatural.

DIVISIBILITY, *s.* [*divisibilité*, Fr.] the quality of admitting division, either mentally or actually.

DIVISIBLE, (*divizible*) *a.* [*divisibilis*, from *divido*, to divide, Lat.] capable of being actually or mentally divided into parts.

DIVISIBLENESS, *s.* the quality of being divided.

DIVISION, *s.* [*divisio*, from *divido*, to divide, Lat.] is the art of dividing any thing into parts, also the parts themselves into which any thing is divided. In arithmetic, it is one of the four fundamental rules, and teaches us how often a less number called the divisor is contained in a greater, called the dividend, the number of times which the divisor is contained in the dividend, being termed the quotient. In natural philosophy, or mechanics, it is the taking a thing to pieces that we may have a more complete conception of the whole. This is frequently necessary in examining very complex beings or pieces of curious mechanism, the several parts of which cannot be surveyed at one view. In music, it is the dividing the interval of an octave into a number of less intervals. In rhetoric, it is the arrangement of a discourse into several heads. In war, the *divisions of a battalion* are the several parts into which it is divided in marching. At sea, it is the third part of a fleet of men of war, and sometimes the ninth, which last case happens when a fleet is divided into three squadrons, for then each squadron is distributed into three divisions. In an engagement, the order of battle is to place all the squadrons and all the divisions on each side in one line; and this order is kept as long as the wind and other circumstances will permit.

DIVISOR, (*divizor*) *s.* [*divisor*, from *divido*, to divide, Lat.] in arithmetic, the dividing number, or that by which the dividend is divided, and which shews how many parts it is to be divided into.

DIVORCE, *s.* [*divortium*, from *diverto*, to turn from, Lat.] a breach or dissolution of the bond of marriage, or the legal separation of man and wife. The usual divorces among us are of two kinds, viz. *a mensâ et thoro*, from bed and board; and, *a vinculo matrimonii*, from the bond or tie of marriage. The first does not dissolve the marriage, since the cause thereof is subsequent to it: and at the same time supposes the marriage to be lawful. This divorce may be on account of adultery in either of the parties, for the cruelty of the husband, &c. As this divorce dissolves not the marriage, so it does not debar the woman of her dower, nor bastardize her issue, or make void any estate for the life of the husband and wife. A divorce, *a vinculo matrimonii*, entirely dissolves the marriage, as the cause is a pre-contract with some other person, consanguinity or affinity within the Levitical degrees, impotency, impuberty, &c. In this case, the dower is gone, and the children begotten between the parties divorced are bastards. On this divorce, the parties are at liberty to marry again; and in divorces for adultery, several acts of parliament have allowed the innocent party marriage with another person. Divorces are only to be had by consent of parliament.

To DIVO'RCE, *v. a.* to separate a husband or wife from each other; to abolish and annul the marriage contract. Figuratively, to force asunder, or to separate by violence; to take away by force.

DNIE'PER, anciently BORISTHENES, a large river of Europe, rising in the government of Tver, or Tweer, and falling into the Black Sea, about 10 miles below Ockzakow. It flows entirely through the Russian dominions, through its whole course of about 800 miles; during which its navigation is only once interrupted by a series of cataracts, which begin below the mouth of the Samara, and continue for 40 miles. They are passed, however, in spring without much hazard, even by loaded barks.

DNIE'STER, a fine river of Europe, which rises in Red Russia, or Galicia, and passing by Choczim, Bender, &c. falls into the Black Sea at Akerman, between the mouths of the Danube and Dnieper.

To DO, *v. a.* preter. *did*, part. pass. *done*; [*don*, Sax.] to perform, act, or practise. To execute or discharge, applied to a message; to cause; to transact; to have recourse to, used as a sudden and passionate question. To perform; to exert; to deal; to gain a point; to put; to finish; to conclude; to settle. *What to do with*, signifies to bestow, to employ, to dispose of, or what use to make of. "He knows not *what to do with* his money." Neuterly, to cease to be concerned with. "I have *done with* him." To fare; to be conditioned with respect to health or sickness. To be able to succeed, or perfect a design. "We shall *do* without him." *Addison.* Sometimes however it is used to save the repetition of another verb. "I shall *come*, but if I *do* not, go away;" *i. e.* if I *come* not. Sometimes it is used as a word of peremptory and positive command; as, "Help me, *do*:" Or to increase the emphasis of the verb which follows it; "But I *do* love her." *Shak.* And sometimes by way of opposition; "I *did* love him, but scorn him now."

DOB-CHICK, *s.* in zoology, the common English name of the little diver or didapper. This bird is said to move most easily under water.

DOMINGO, ST. or HISPANIOLA, the richest of the Caribbee Islands in the West Indies. It is 350 miles in length, and 110 in breadth; and the climate, though hot, is healthy, except to new comers. The country is uncommonly fruitful, and beautifully diversified with hills and valleys, woods and rivers; it is also well stocked with fruit trees, and produces coffee, sugar, indigo, tobacco, salt, cotton, ginger, gums, wax, honey, and drugs. Its coasts and rivers are well supplied with fish and turtles; and the animals brought here from Europe have multiplied prodigiously, supplying provisions, hides, and tallow. There are also mines of gold, talc, and crystal. The Spaniards held the eastern part of this island upwards of three centuries; but the whole, by the treaty of 1795, was ceded to the French; after which it suffered, under all the successive rulers sent from France, the miseries of anarchy, cruelty, and oppression; in order to put an end to which, the Directory, in 1797, appointed the black general Toussaint Louverture, commander in chief, and governor general of the island, as a reward for the gallant manner in which he had defended it against the English. He was a man of no common talents, and the happy effects of his administration proved the propriety of the appointment; but proceeding to give a new constitution to the island, which though it acknowledged its dependence on France, in fact separated it most essentially, the French government in 1802 sent an army of 25,000 men to enforce obedience, which after three months' cruel war was effected, and Toussaint afterwards sent prisoner to France. But the contest was soon renewed, and the insurgent blacks carried on, for a long time, a desolating war against the French army; the remains of which, harassed on all sides, capitulated on the 19th of November, 1804, to the black general Dessalines, agreeing to evacuate Cape Francois, and retire to their ships, which were afterwards surrendered by convention to the English under admiral Duckworth. The blacks, having thus got rid of their enemies in that part of the island, proceeded to form a new government under the title of the republic (since changed to that of empire) of Hayti, with general Dessalines at its head, who published a most vindictive manifesto to the negroes, exciting them to vengeance against the French inhabitants, and (horrid to relate) these were given up for some days to indiscriminate butchery! After this, intent on driving the French wholly from the island, he carried the war into the Spanish part, of which the town of St. Domingo is the capital; but failing in this enterprise, the French retained the possession of it till 1809; when, by the assistance of the English, their total expulsion from the island was effected, and the Spanish dominion again restored. Nor has the negro government of Hayti yet enjoyed any stability, having undergone several revolutions, and the sovereignty being still contested by two rival chiefs. St. Domingo lies between Jamaica and Porto Rico.

DOMINICA, *s.* palm-sunday.

DOMINICA, an English West India island, about 29 miles in length and 16 in breadth. It yields coffee, indigo, ginger, and other articles of West-Indian produce, but the soil, being thin, is more adapted to the rearing of cotton than sugar. In the woods are innumerable swarms of bees, which produce great quantities of wax and honey, and the island is well supplied with rivulets of water. It is divided into ten parishes. The only towns of note are Charlotte Town, or Rousseau, on the S. W. side of the island, and Portsmouth, at the head of Prince Rupert's Bay. From January 5, 1787, to January 5, 1788, the exports amounted to the value of 302,987l. 15s. There is no considerable bay or harbour, but the anchorage round the coast is commodious and safe, and ships find shelter under its capes. It lies about half way between Guadaloupe and Martinico. Lat. 15. 32. N. lon. 61. 23. W.

DOMINICAL, *a.* noting the Lord's day, or Sunday. The *dominical letter*, in chronology, is that which denotes the Sunday in almanacks, &c. throughout the year: of these letters there are consequently seven, beginning with the first letter of the alphabet; and as in leap-years there is an intercalary day, there are then two, the first of which denotes every Sunday till the intercalary day, and the second all the Sundays which follow after it. The dominical letter for any particular year being known, it may be readily found for any succeeding one, by observing that they move in a retrograde order, so that if in any given year the Sunday-letter was D, in the following year, (provided it was not leap-year,) it would be C, in the next year after that, B, and so on: but in leap-year there are two of them used, as for example, in the year 1803 the dominical letter was B, in 1804 (being leap-year) AG, in 1805, F, &c.

DOMINICANS, an order of religious, called in France Jacobins, and in England Black Friars, or Preaching Friars. This order, founded by St. Dominic, a native of Spain, was approved of by Innocent III. in 1215, and confirmed by a bull of Honorius III. in 1216, under St. Austin's rules, and the founder's particular constitutions.

They were in Britain the first and most distinguished order in the island, chosen out of the best families; and the honours of their birth, added to those of their function, procured them the highest veneration. They were versed in astronomy, geometry, natural philosophy, politics, and geography; had the administration of all sacred things; were the interpreters of the gods, and supreme judges in all causes, whether ecclesiastical or civil. From their determination was no appeal; and whoever refused to acquiesce in their decisions, was reckoned impious, and excommunicated. They were generally governed by a single person, called an Archdruid, who presided in all their assemblies. Once a year they used to retire, or rather assemble in a wood, in the centre of the island, at which time they used to receive applications from all parts, and hear causes. Their peculiar opinions are not well ascertained by writers, though it is agreed by all, that they held the immortality of the soul, and its transmigration; that nothing could appease the gods more powerfully than human sacrifices; and that there was one supreme Deity, who presided over all others.

DRUMMA'JOR, *s.* the chief drummer of a regiment. Every regiment has a drummajor, who has the command over the other drums. They are distinguished from the soldiers by clothes of a different fashion; when the battalion is drawn up, their post is on the flanks; and on a march, between the divisions.

DRU'MMER, *s.* he that beats the drum; every company of foot has one, and sometimes two.

DRUNK, *a.* [from *drink*] intoxicated, or deprived of the use of the understanding, by immoderate drinking. Figuratively, soaked; beautifully applied to inanimate things.

SYNON. Half a pint of wine will make some men *drunk*, when others shall drink a gallon without being the least *fuddled*. Good success will sometimes so *intoxicate* a person as to take him off from his business, and render him disagreeable to all his acquaintance.

DRU'NKARD, *s.* one given to the excessive use of strong liquors.

DRU'NKEN, *part.* [from *Drink*] intoxicated with liquor; given to habitual drunkenness; frequently intoxicated with liquor.

DRU'NKENLY, *ad.* after the manner of one intoxicated with strong liquors.

DRUNKENNESS, *s.* intoxication, or ebriety; the habit of getting drunk. Figuratively, an intoxication or disorder of the mind. PROV. *What soberness conceals, drunkenness reveals—He that kills a man when he is drunk, must be hanged when he is sober.*

DRUSES, a people of Syria, on the mountains Libanus and Antilibanus, governed by particular princes, called Emirs. They are very friendly to Europeans; worship the images of the saints, like the Roman Catholics, yet observe the fast of Rammedan, and offer their devotions both in Mahometan mosques, and Christian churches. Some of them admit circumcission, but others reject it. They are a strong and robust people, of an active and enterprising character, and accustomed from their infancy to fatigues and hardships. Their language is pure Arabic.

DRY, *a.* [*drig*, Sax.] without wet or moisture. Without rain, applied to the seasons. Thirsty, or athirst for want of drink. Figuratively, barren; plain; hard; acrid; severe.

To DRY, *v. a.* to free from, or exhale moisture or wet; to wipe away moisture, used with *up*; to drain; to drink up. Neuterly, to grow dry.

DRY'ADES, in the heathen mythology, were a sort of deities or nymphs, which the ancients thought inhabited groves or woods. They differed from the *Hamadryades*; these last being attached to some particular tree, wherewith they were born, and with which they died; whereas the *Dryades* were the goddesses of trees and woods in general.

DRY'ER, *s.* that which has the quality of absorbing moisture.

DRY'-EYED, *a.* without tears; without having the eyes moistened with tears.

DRY'LY, *ad.* without moisture. Figuratively, in a cold or indifferent manner. With great reserve applied to treatment or behaviour; in a sarcastical or ironical manner. Without any embellishment, applied to style.

DRY'NESS, *s.* want of moisture; want of rain; want of juice. Figuratively, want of embellishment, applied to style, or set discourses.

DRY'SHOD, *a.* without wetting the feet; without treading in the water above the shoes.

DUAL, *a.* [from *duo*, two, Lat.] expressing or including only two. In the Hebrew or Greek language, a variation of a noun which only signifies *two*, a distinction which the modern languages seem deficient in.

To DUB, *v. a.* [*addubba till riddara*, Islandic, to dub a knight. *Addubba*, in its primary signification, implies to strike, knights being made by a blow given with a sword] to create or make a man a knight; to confer any title or dignity.

DUB, *s.* a blow or knock.

DU'BIOUS, *a.* [*dubius*, Lat.] not settled in an opinion, applied to persons. Not fully proved, or that which has equal probability on either side, applied to opinions. Not plain; not clear.

DU'BIOUSLY, *ad.* in such a manner as will admit of different senses.

DU'BIOUSNESS, *s.* uncertainty.

DU'BITABLE, *a.* that may be questioned or doubted; that a person may decline assenting to.

DUBITA'TION, *s.* [*dubitatio*, from *dubito*, to doubt, Lat.] the act of doubting, or questioning the truth of a thing.

DU'BLIN, the capital of Ireland, in the county of the same name, is a large, handsome, and populous city, seated on the river Liffey, or Anna Liffey. The appearance of this metropolis, the Bay of Dublin, and the surrounding country, on approaching them from the sea, is grand and beautiful; after passing the Isle of Lambay, and that of Ireland's Eye, which is small, being a lofty and grotesque-looking rock, and the craggy mountain of Howth, in coming from the north; or, after passing the rocky cliffs of Bray in approaching from the south, the extensive Bay of Dublin opens on the view: on the left are seen the hills and mountains of Wicklow; on the right, the gently rising shores of Clontarf; the city, on a rising ground, at the extremity of the bay, and at several miles distance, with domes and spires, terminates the view. The cassoon, a beautiful pharos, or light-house, 4 or 5 miles from the city, seems, like another Eddystone light-house, to rise out of the sea; from this, however, there is a broad and firm wall, or pier, lately completed, reaching to Ringsend, to which the city is now nearly extended. On the north side of the wall is the harbour, where vessels lie safe at anchor with an open sea to the N. On the south side of the wall, near the town, are wharfs, principally used for bathing; and between these and the opposite shore is an extensive and smooth strand, which is dry at low water; there is a wharf also on the N. side of the river, for the purpose of bathing, and elegant baths on both sides of the water. From Ringsend upwards, through the whole city, the river is embanked with quays on both sides; as these are open nearly through their whole extent, they form beautiful walks of very extensive range. The docks laid out on each side of the river are sufficiently capacious to hold several thousands of vessels. The streets of Dublin are pretty regular, and well paved, the squares spacious and elegant, and the public buildings superb. The town is supplied with water by means of pipes. A circular road, about 10 or 11 miles in length, encompasses the city, and the country around it is pleasant. There is not yet in Ireland, as in England, a parochial provision for the poor; but there are, throughout the country, institutions for their relief, supported by voluntary contributions. Of this sort is the House of Industry in Dublin. The trade of Dublin is extensive, though since the union it has been on the decline; yet it is thought by some that the country will be ultimately benefited by that measure. The bar at the entrance of the harbour renders the approach of large vessels difficult and dangerous; some improvements, however, are projected to remedy this great defect. Lat. 53. 23. N. lon. 6. 37. W.

DU'BLIN, a county of Ireland, in Leinster, 25 miles in length, and 16 in breadth, bounded on the N. by Meath, on the E. by the Irish Channel, on the S. by Wicklow, and on the W. by Meath and Kildare. The soil is rich and fertile in corn and pasture. It contains 107 parishes, 20 of which are in the city of Dublin, 4 market towns, and about 26,000 houses.

DU'CAL, *a.* belonging to a duke.

DUET, *s.* a term in music for a song or air composed for two voices or instruments.

DUG, *s.* [*deggia*, Ital.] a pap, nipple, or teat, generally applied to that of a beast; and to that of a human creature only by way of reproach and contempt; though formerly it was applied to a human creature in a good sense.

DUKE, *s.* [from *duco*, to lead, Lat.] is either the title of a sovereign prince, as the duke of Savoy, Parma, &c. or it is the title of honour and nobility next below princes. The commanders of armies in time of war, the governors of provinces, and wardens of marches in time of peace, were called *Duces*, under the late emperors. At present, duke is a mere title of dignity, without giving any domain or territory, or conferring jurisdiction over the place from whence the title is taken. A duke is created by patent, cincture of

sword, mantle of state, imposition of a cap, and coronet of gold on his head, and a virge of gold put into his hand. His title is grace; and in the style of the heralds, most high, potent, high-born, and noble prince. Their eldest sons are, by the courtesy of England, styled marquises, and their youngest lords, with the addition of their christians names, as Lord George, Lord Robert, &c. and take place of viscounts, though not so privileged by the laws of the land.

DU'KEDOM, *s.* the dominion of a duke.

DUMBARTONSHIRE, anciently LENNOX, a county of Scotland, bounded on the W. by Argyleshire and Loch Long; on the N. by Argyleshire and Perthshire; on the E. by Perthshire and Stirlingshire; and on the S. by the counties of Lanerk and Renfrew. Its greatest length is 45 miles, its breadth from 6 to 15. The W. part of this county abounds with morasses; in other parts it is fertile in corn and pastures; but the principal riches arise from the fisheries in the lochs in and about its coasts. The principal of these is Loch Lomond.

DUMBARTON, the capital of the county, is a large, ancient town, containing about 2000 inhabitants. Its principal manufacture is crown and bottle glass, but many of the young women are employed in the neighbouring print fields, on the banks of the Leven. Close to the river is a castle, built on a vast rock, formerly deemed impregnable. This town was erected into a royal burgh by King Alexander II. in 1221. About 2000 tons of shipping belong to this place, which has a harbour for large brigs, secure in all weathers. It is situated at the confluence of the rivers Leven and Clyde, 15 miles N. W. of Glasgow.

DU'MBLY, (*dúmly*) *ad.* mutely; silently; without speaking.

DU'MBNESS, (*dúmness*) *s.* incapacity of speaking; forbearance; silence.

DUMFERMLING, a parliament town of Scotland, in the county of Fife. It was remarkable for its magnificent abbey, and a royal palace, in which King Charles I. was born. The ruins of the abbey are yet to be seen. It is 15 miles N. W. of Edinburgh.

To DUMFOUND, (*dúmfound*) *v. a.* to confuse a person so as to render him unable to speak. A low word.

DUMFRIESSHIRE, a county of Scotland, bounded on the W. by the counties of Kirkcudbright and Ayr; on the N. by the shires of Lanerk, Peebles, and Selkirk; on the N. E. and E. by those of Selkirk and Roxburgh; and on the S. by Solway Frith and a part of Cumberland. It is about 50 miles in length, and from 10 to 30 broad. It comprehends the districts of Annandale, Nithsdale, and Eskdale.

DUMFRIES, the capital of the county, is a well built town, surrounded on all sides, at the distance of a few miles, by a continued chain of hills, forming altogether one of the grandest natural amphitheatres in Britain. The number of inhabitants, at an enumeration lately taken, was 5600. They have 8 or 10 coasting vessels, and 2 or 3 employed in the Baltic and wine trades. It is seated on the river Nith, 8 miles N. of Solway Frith, and 53 S. S. W. of Edinburgh.

DUN, *s.* one who asks a person for a debt with clamour, and incessant importunity.

DUNBAR, a well-built town of Haddingtonshire, with a good harbour, and about 18 vessels employed in the coasting and foreign trade, besides 12 fishing boats. This town trades largely in malt and grain. Under the rock, on which are the ruins of a castle, are two natural arches, through which the tide flows; and here are vast basaltic columns of red grit stones. It is 25 miles E. of Edinburgh.

DUNCE, *s.* [perhaps from *dom*, Belg.] one who has not a capacity for receiving instruction.

DUNDALK, a sea port and assize town of Louth, in Leinster. It consists of a wide street, nearly a mile long, and some cross lines; has a good market-house, and carries on a manufacture of muslins, linens, and cambrics. It is most advantageously situated for an extensive inland trade, and the port is very safe for shipping. The bay also has good moorings, and abounds with fish. Dundalk is 18 miles N. of Drogheda, and 40 of Dublin.

DUNDEE, a large and flourishing town in the shire of Angus, with manufactures of glass, coarse linen, sail cloth, cordage, coloured and white thread, buckram, tanned leather, shoes, and hats; and here is also a sugar-house. The houses are built of stone, generally three or four stories high, and the principal streets, with a number of lesser ones, are all paved in the best manner. Trading vessels of the largest burden can get into the harbour, which is safe, commodious, and of easy access, with broad extensive piers, well adapted for the purposes of loading and discharging vessels; and there is good room on the quay for ship-building, which is carried on here to a large extent. In the year 1792, there were 116 vessels belonging to the port, navigated by 698 men; of these, 34 were employed in the foreign, and 78 in the coasting trade, with 4 in the whale fishery. The inhabitants are computed at 20,000. Dundee is situated on

the N. side of the Frith of Tay, 14 miles N. W. of St. Andrews, and 30 N. of Edinburgh.

DUNGY, *a.* abounding in dung, resembling dung.

DUNKELD, a town of Perthshire, situated amid romantic rocks and woods, under which rolls the majestic Tay, 10 miles nearly N. of Perth. It is much resorted to in the summer months, for the benefit of goats' whey. It is the market town of the Highlands on that side, and carries on a manufacture of linen. The duke of Athol has a beautiful modern seat here.

DUNKIRK, a considerable and important maritime town of France, in the district of Bergues, and department of the North, containing about 80,000 inhabitants. By means of a sluice, 42 feet wide, the bason within the town will hold 40 ships of the line always floating. It is 22 miles S. W. of Ostend. Lat. 51. 2. N. lon. 2. 28. E.

DUNNER, *s.* a person employed in collecting petty debts, and making use of vehement importunity for that purpose.

DUNMOW, GREAT, a town of Essex, with a manufacture of baize. In the reign of Henry III. the Lord Fitzwalter instituted a custom here, which is still the tenure of the manor, that whatever married man did not repent of his marriage, or quarrel with his wife, in a year and a day afterwards, should go to the priory, and receive from the lord a gammon or flitch of bacon, provided he swore to the truth of it. Some old records here mention several that have claimed and received this reward; and it has been received so lately as since the year 1750, by a weaver and his wife, of Coggeshall. It has been *demanded* more recently, but the demand is now evaded, from the ceremony being attended with considerable expense to the lord of the manor. It is situated on the Chelmer, 13 miles N. of Chelmsford, and 40 N. E. of London. Market on Saturday.

DUNSE, a town in Berwickshire, with a good market, and 4 considerable fairs for horses, sheep, and black cattle, in March, June, August, and November. It is situated between the forks of the rivers Blackadder, and Whiteadder, 12 miles W. of Berwick-upon-Tweed.

DUNSTABLE, a populous town of Bedfordshire, with several good inns, as it is a great thoroughfare, standing on the great road between London and the N. and N. W. counties. It is noted for elegant baskets, hats, &c. made of straw, which are considerable, and even articles of exportation. The larks taken hereabouts are said to be the largest and best in the kingdom. It is seated on a dry chalky eminence, near the Chiltern hills, 17 miles nearly S. of Bedford, and 34 N. N. W. of London. Market on Wednesday.

DUNSTER, a town of Somersetshire, consisting of about 400 houses, with a manufacture or kerseys. It stands on a low ground, 20 miles N. W. of Taunton, and 158 N. W. of London. Market on Friday.

DUNWICH, an ancient town of Suffolk, seated on the top of a loose cliff. It was once large and populous, and an episcopal see; but here are now only the remains of a town, all but two parishes being swallowed up by the sea. The principal business here is fishing for herrings, mackarel, &c. It is 24 miles S. of Yarmouth, and 99 N. E. of London. Market on Saturday.

DY'SURY, *s.* [from *dys*, ill, and *oureo*, to make urine, Gr.] difficulty in making urine, or water.

E.

E THE fifth letter of the alphabet, and the second vowel, has different pronunciations in most languages. In English it has two sounds; long, as *scēne*, and short as *mĕn*. *E* is the most frequent vowel in the English language; for it not only is used like the rest, in the beginning or end of words, but has the peculiar quality of lengthening the foregoing vowel, as *căn, cāne; măn, mānc; găp gāpe; glăd, glāde; brĕd, brēde; chĭn, chīne; whĭp, whīpe; thĭn, thīno; nŏd, nōde; tŭn, tūne; plŭm, plūme.* Yet it sometimes occurs final, where yet the foregoing vowel is not lengthened, as *gŏne, knowlĕdge ĕdge, gĭve.* Anciently, almost every word ended with *e*; as, for *can, canne*; for *year, yeare*; for *great, greate*; for *need, neede*; for *flock, flocke*. *Ea* has the sound of *e* long; the *e* is commonly lengthened rather by the immediate addition of *a* than by the opposition of *e* to the end of the word; as, *mĕn, mēan; sĕll, sēal; mĕt, meat; nĕt, nēat.* As a numeral, *E* stands for 250. In music, it denotes the tone *e-la mi*. In the calendar, it is the fifth of the dominical letters. On the compass, it makes the east point, as E. S. E. *i. e.* east south east. Among writers or authors, it stands for *example*, or *exempli*, as, *e. gr. exempli gratia*, or *for example*.

EACH, (*eech*) *pron.* [*elc*, Sax.] either of two; every one of any number. To *each* the correspondent word is *other*, whether it be used of two, or a greater number.

EAD, or ED, [Sax.] in compound words, and *eadig* in the simple, denote happiness or blessedness. Thus *Eadward, Edward*, is a happy preserver; *Eadgar*, happy power.

EA'R-SHOT, (*eér-shot*) *s.* that space or distance within which any thing may be heard.

EARTH, (*erth*) *s.* [*eorth*] Sax.] in cosmology, the terraqueous globe, as distinguished from the sun, moon, and stars. In theology, the present state of existence, as distinguished from the eternal states of the dead, and especially from heaven. In the old Aristotelian philosophy, a simple dry and cold substance, which was believed to be an ingredient in the composition of all natural bodies. Thus it was distinguished from air, fire, and water. In common conversation, mould or dust, that unorganized matter which generally appears in a solid form, and is not hardened into stone. In mineralogy, fossile substances, distributed into four classes, salts, earths, combustibles, and metals. In this arrangement earths comprehend stones. Earths are either simple or compound. The simple earths are nine. silex or flint, alumine or clay, zircone, glucine, yttria, barytes, strontian, lime, and magnesia. Later discoveries have, however, rendered it probable that all these earths are only the oxydes of metals. Figuratively, the inhabitants of the earth.

To EARTH, (*erth*) *v. a.* [*eardian*, Sax.] to hide under ground; to cover with earth. Neuterly, to go or hide itself under ground.

EA'RTH-BORN, (*érth-born*) *a.* sprung from the earth. Figuratively, descended from mean parents.

EA'RTH-BOUND, *a.* fastened by the pressure of the earth.

EA'RTHEN, (*érthen*) *a.* made of earth or clay.

EA'RTHFLAX, *s.* a kind of fibrous fossil.

EA'STER, (*Eéstre*) *s.* [*eastre*, Sax.] the time when Christians celebrate the resurrection of Christ from the grave. The word used to denote this season has no relation to this solemnity, but took its rise from *Eastre*, the name of the Saxon deity or goddess, whose festival was celebrated about this time of the year; and after its abolishment by Christianity, the name was retained, and to this day used to signify the festival of Christ's resurrection, as mentioned above.

EA'STERN, (*eéstern*) *a.* situated, looking, or tending towards the east, or that point of the compass in which the sun rises.

EAST-GRINSTEAD, a town in Sussex, with a market on Thursday. It is a borough, has a handsome church, and sends two members to parliament. The assizes for the county are sometimes held here. It is 29 miles S. of London.

EAST-HA'RLING, a town in Norfolk, whose market is on Tuesday. It is 88 miles from London.

EAST-ILSLEY, a town in Berkshire, seated between two hills among fruitful corn-fields, and excellent downs for feeding sheep. This place is not contemptible; has a market every Wednesday in the summer chiefly for sheep. It is 53 miles W. of London.

EAST-LOO'E, a town of Cornwall, with a market on Saturday. It is seated pretty commodiously on a creek of the sea, over which there is a large stone bridge, supported by many arches, which leads to West-Looe, standing between two hills. They are both corporations, and send members to parliament. The chief benefit which the inhabitants have is in their fishery. It is 232 miles W. by S. of London.

EA'STWARD, (*eéstward*) *a.* [*eastweard*, Sax.] towards the east, or that point of the compass where the sun rises when in the equinoctial points.

EA'SY, (*eéasy*) *a.* to be performed without fatigue, incumbrance, or difficulty; free from disturbance or anxiety; believing without inquiry or opposition; credulous; complying; free from bodily pain; without formality; elegantly negligent.

To EAT, (*eet*) *v. a.* [preter *ate* or *eat*, participle *eat* or *eaten*; *etan*, Sax.] to devour or consume by the mouth. Figuratively, to corrode or destroy, applied to the action of some corrosive substance; to consume prodigally; to retract or unsay a thing when joined to *word*. ECLI'PSE, *s.* [from *ekleipo*, to fail, Gr.] in astronomy, the darkening of one of the luminaries, by the interposition of some opaque body between it and the eye, or between it and the sun. The sun is eclipsed by the moon's intervening between the earth and the sun. An eclipse of the moon is when the earth being between the sun and moon, hinders the light of the sun from falling upon her; if the light of the sun is kept off from the whole body of the moon, it is a total eclipse; if from a part only, it is a partial one. A state of darkness, or want of knowledge, applied to the mind.

To ECLI'PSE, *v. a.* to darken any luminary. Figuratively, to destroy any light; to drown a lesser light by superior splendour; to cloud; to obscure; to disgrace.

ECLI'PTIC, *s.* [from *ekleipsis*, an eclipse, Gr.] in astronomy, is a great circle of the sphere, supposed to be drawn through the middle of the zodiac, making an angle with the equinoctial, in the points of Aries and Libra, of about 23° 28', which is the sun's greatest declination; or, more strictly speaking, it is the path or way, among the fixed stars, that the earth appears to describe to an eye placed in the sun. Some call it the way of the sun, because the sun, in his apparent annual motion, never deviates from it, as all the other planets do more or less. It is called *ecliptic*, because eclipses of the sun and moon happen when they are in or near it. In geography, it is a great circle on the terrestrial globe, not only answering to, but falling within the plane of the celestial ecliptic.

E'CLOGUE, (*éklog*) *s.* [*ekloge*, Gr.] a pastoral poem, whose scenes are confined to rural life, and whose personages are shepherds.

ECO'NOMY, *s.* See OECONOMY.

ECPHRA'CTICS, (*ekfráktiks*) *s.* [from *ek*, out of, and *phratto*, to obstruct, Gr.] such medicines as open the vessels through which the humours are to pass, or which render tough humours thin, and thereby promote their discharge.

EDENTATED, *a.* [*edentatus*, Lat.] deprived of teeth.

E'DGAR, (son of Edmund) succeeded his brother in 959, when he was 16 years of age. His reign was one continual calm, without any wars or commotions, which was owing to his vast preparations both by sea and land, so that none dared to attack him, and, without striking a stroke, he obliged the kings of Wales, Ireland, and the Isle of Man, to acknowledge him for their sovereign; and it is said, that he was rowed down the river Dee by eight kings, his vassals, he himself sitting at the helm. There was another circumstance also which tended to keep things quiet during all Edgar's reign; and that was, his being the greatest patron of the monks, who had it in their power to preserve peace. He recalled Dunstan, and made him archbishop of Canterbury. The secular priests were expelled the monasteries, and the regulars put in their room; these latter were also again put in possession of the ecclesiastical benefices, and the seculars ejected. He contrived a good expedient to clear the country of wolves, which were then very numerous, and made terrible havock among the flocks. Instead of the tributes of gold, silver, and cattle, paid him by the Welsh, he ordered them, in 961, to bring him every year 300 wolves' heads; and published, throughout England, a general pardon to all criminals, on condition they brought him, by such a time, a certain number of wolves' tongue, in proportion to their several crimes; so that in three years' time there was not one left. He also freed the nation from the worst kind of wolves, corrupt and unjust judges and magistrates. This king married Elfrida, the daughter of the earl of Devonshire; the story contains somewhat extraordinary. Edgar hearing that Ordgar earl of Devonshire had a daughter named Elfrida, esteemed the greatest beauty in England, he was resolved to make her his wife, if she answered the description, and sent earl Ethelwold, his favourite, to bring him an account. Ethelwold, upon seeing the young lady, fell desperately in love with her himself, and privately married her. Upon his return he told the king there was nothing extraordinary in her; whereupon the king laid aside his design of marrying her. Ethelwold one day represented to the king, that, though Elfrida was not fit for a king, yet she was so great a fortune, that it would be a vast advantage to a subject, and so got the king's leave to marry her; upon which his marriage was solemnized publicly. However, Edgar was informed of Ethelwold's treachery; upon which he was resolved to see her himself; and going into those parts where Ethelwold kept her, upon some pretence or other, he told Ethelwold he desired to see his wife. Ethelwold was quite confounded at this, but he could not prevent it. As soon as the king saw her, he was quite enamoured with her beauty, and was resolved to be revenged on the perfidious earl. Soon after, Ethelwold was found murdered in a wood. Edgar shortly after was married to Elfrida, by whom he left one son, Ethelred, who succeeded his brother Edward. Edgar died, 975, in the 32d year of his age, having reigned about 16 years after Edwy's death: he was buried at Glastonbury. Edgar was a prince of a very mixed character, in which the vicious passions very often predominated. Though we grant him to have been a sound politician, an excellent legislator, and a monarch whose abilities were employed for the benefit of his country, we must own at the same time that he ascended the throne of Mercia by the most flagrant injustice; that he was superstitious in his religion, lawless in his passion, and bloody in his revenge; for, exclusive of the vengeance upon Ethelwold, he destroyed the whole Isle of Thanet with fire and

sword, because a few of the inhabitants had been concerned in plundering some merchants from York. He extended his liberality to men of learning and genius; his court was hospitable and magnificent, and generally filled with a concourse of foreigners, who were charmed with his elegance and politeness; and, from the tranquillity of his reign, he acquired the denomination of Edgar the Pacific.

EDGE, *s.* [*eege*, Sax.] the sharp side of any cutting instrument; a narrow part arising from one which is broader; the extremity, border, or outside of a thing; intenseness of desire; keenness; acrimony of temper. *To set the teeth on edge*, means to cause a tingling pain in the teeth.

To EDGE, *v. a.* to sharpen or make an instrument cut better; to border, or put something round the extremities of a thing; to exasperate; to excite; to put in such a position as to make way or give room; to advance beyond a line, or situation. Neuterly, to advance, or move forward against any obstacle, or body moving in an opposite direction; to go close upon a wind, and sail slow.

E'DGED, *part.* sharp, opposed to blunt.

E'DGELESS, *a.* nor fit to cut with; unable to cut; blunt.

E'DGETOOL, *s.* a tool made sharp to cut.

E'DGEWARE, a town of Middlesex, 8 miles N. W. of London. Market on Thursday.

E'DGEWISE, *ad.* with the edge placed in a particular direction.

E'DGEWORTH, Gloucestershire, 3 miles from Bisley, and 6 from Cirencester.

E'DGEWORTH's TOWN, in Longford, Leinster, 52 miles from Dublin.

E'DGING, *s.* something added by way of ornament; a narrow lace. In gardening, rows of shrubs or plants, placed round the extremities of a bed instead of borders.

E'DIBLE, *a.* [from *edo*, to eat, Lat.] fit to be eaten; fit for food.

E'DICT, *s.* [from *edico*, to command, Lat.] in matters of civil policy, is an order or instrument, signed and sealed by a prince, to serve as a law to his subjects.

EDIFICA'TION, *s.* [from *ædes*, a house, and *facio*, to make, Lat.] improvement; the act of advancing in religion.

E'DIFICE, *s.* [from *ædes*, a house, and *facio*, to make, Lat.] a building, or house, generally applied to signify some large or pompous building.

E'DIFIER, *s.* one who improves another by instruction.

To E'DIFY, *v. a.* [from *ædes*, a house, and *facio*, to make, Lat.] to build; to improve by instruction; to instruct or teach.

E'DILE, *s.* [from *ædes*, a house, Lat.] the title of an officer among the Romans, who resembled the city-marshal in London, or a surveyor.

E'DINBURGH, a city, the capital of Scotland, situated in the county to which it gives name, on three hills. It may properly be divided into the Old and new Towns. The situation of the Old Town is singular and striking: it stands on the middle ridge, or hill, which is narrow and steep, and terminated abruptly on the W. by the castle, a very ancient building, accessible only by a drawbridge, and erected on a lofty precipitous rock. The High Street, a mile in length, and generally 90 feet broad, extends from the castle to Holyrood House. On each side of this steep hill the houses form narrow lanes, which are called closes, and extend N. and S. Many of them are lofty; but so piled, as it were, upon each other, that they are neither commodious nor elegant. The New Town is situated on the N. side of the Old, on an elevated plain, from which the ground descends to the S. and N. with a gentle declivity. It forms an assemblage of uniform streets and squares, including several public buildings, the whole built entirely of stone, with considerable taste and elegance. The buildings on the S. side of the Old Town, though inferior to those on the N. are extensive and stately. The most striking object here is the New College, built by public subscription, on the site of the old one, on a large and magnificent plan. The number of students in the university is estimated at 1000, of whom 400 study medicine. The city is governed by a lord provost, a guild council, and 25 common council. Here are 14 incorporated trades, each having its deacon or warden. The principal public buildings are the palace of Holyrood House, the Royal Exchange, built in 1753, the Register Office, the Physicians' Hall, Herriot's Hospital, founded in 1628, for the education of 140 poor boys, Watson's Hospital, for the sons of decayed merchants, an hospital for orphans, and a Royal Infirmary, incorporated by charter in 1736. Edinburgh, with its dependencies, is supposed to contain 100,000 inhabitants, and is supplied with water, conveyed in cast-iron pipes from Commiston, 4 miles to the W. It is 2 miles S. of Leith, which is its port, 54 W. N. W. of Berwick-upon-Tweed, and 389 N. by W. of London. Lat. 55. 58. N. lon. 3. 7. W.

E'DINBURGHSHIRE, or MID LOTHIAN, a populous, well cultivated, fertile, and pleasant county of Scotland, 27 miles in length, and 16 in breadth, but in some places not above 6. It is bounded on the N. by the Frith of Forth, which separates it from Fifeshire; on the E. by the shires of Haddington and Berwick; on the S. by those of Selkirk, Peebles, and Lanerk; and on the W. by the shire of Linlithgow.

EDI'TION, *s.* [from *edo*, to publish, Lat.] the publication or impression of a book.

E'DITOR, *s.* one who prepares a manuscript for the press, and corrects the errors of the proof sheet while it is printing.

E'DMUND I. the eldest of Edward the Elder's legitimate sons, was about 18 years of age when he came to the crown of England. No sooner had Edmund began his reign, but the restless Dane prepared for a revolt; and Anlaff, who had fled to Ireland after his late defeat, returned; being furnished with troops from Olaus, king of Norway, he recovered Northumberland, and marched into Mercia; and by the assistance of his countrymen got possession of several places which Edward had taken from them. King Edmund marched towards the north, and engaged Anlaff near Chester; and was preparing to renew the fight next day; but the archbishops of Canterbury and York, who were in the two armies, obtained a treaty to be concluded by break of day, by which Edmund yielded up to the Dane all the country north of Watling-street. King Edmund did not like this treaty, but was forced by the nobles to comply with it. Some time after, Anlaff and Reginald, who had likewise been elected kings, the Mercians, Danes, and the king of Cumberland, with one consent, took up arms, in order to shake off the English yoke. As soon as Edmund had intelligence of these proceedings, he marched into Mercia, and took some towns, and put the danes into such consternation, that the two kings fled out of the island. The Danes upon this threw down their arms, and swore allegiance to Edmund. Then he subdued Cumberland, and gave it to the king of Scotland to fix him in his interest; but reserved the sovereignty of it to himself, and obliged the Scotch king to do him homage for it. Edmund did not long enjoy the fruits of his victories; as he was celebrating the festival of the conversion of the Saxons, at Pucklekirk, in Gloucestershire, one Leolf, a notorious robber, who had been banished for his crimes, impudently came and seated himself in the hall where the king was at dinner. Edmund, provoked at his insolence, ordered him to be seized; but perceiving he was drawing his dagger to defend himself, the king started up in a great rage, and taking hold of him by the hair, dragged him out of the hall; and whilst he was wholly engaged in venting his passion, the infamous Leolf stabbed him to the heart with a dagger so that he fell dead on the spot, in the 8th year of his reign, A. D. 948, leaving behind him two sons, Edwy and Edgar, by Elgiva his wife. Some of this king's laws are still in being, which shew how much he regarded the good of his subjects. Among the rest he ordered, that in gangs of robbers the oldest of them should be hanged; which was the first law in England that punished robbery with death, the pu

nishment before being only pecuniary. Though Edmund reigned but about eight years, yet in that short period he exhibited specimens of extraordinary courage, ability, and regard for the welfare of his subjects.

EDMUND, surnamed Ironside succeeded Ethelred II. in 1016. Upon his father's death, the city of London, all the lords that were there, proclaimed him king of England, whilst the Danes, and all the places in their possession, declared for Canute; but a great many of the English who were among them came over to Edmund. Canute's first attempt was upon London, as being Edmund's chief support, which he beseiged three times, but without success. Before the last of these sieges a great battle was fought, in which both kings eminently displayed their courage and conduct, and the two armies parted at last with equal loss on both sides; though the English were in danger of being worsted, by a stratagem of the false Edric, who was now on the side of the Danes; he cut off the head of a soldier who resembled Edmund, held it upon the top of his lance, in sight of the English, and cried, "Fly, fly, you scoundrels; behold the head of your king in whom you trust!" This would infallibly have occasioned their defeat, if Edmund had not shewed himself with his helmet off, and so revived the courage of his soldiers, which by Edric's artifice began to droop. The battle lasted till night, and Edmund prepared to renew it the next morning; but Canute marched off in the night, and went and beseiged London a third time. Five pitched battles were fought with various success; in the last, Edric, who had reconciled himself to Edmund, went over to the Danes with the body of forces he commanded, which put the English into such a consternation, that they threw down their arms and fled. Nevertheless, Edmund drew together a very powerful army, and marched towards Gloucester, in quest of the enemy; Canute advanced towards him, in order to give him battle. The two kings stood in view of each other, at the head of their respective armies. At last Edmund proposed to Canute, that in order to prevent the effusion of blood, they two should decide the quarrel by single combat. The circumstances relating to this affair are very uncertain. However, the result was, that a peace was concluded, by the partition or the kingdom; Edmund was to have Wessex, *i. e.* all south of the Thames, with London, and a part of the ancient kingdom of Essex; and Canute to have Mercia, Northumberland, and East-Anglia. The valiant and generous king Edmund did not enjoy his share quite a year, being murdered by the procurement of the villain Edric, duke of Mercia, and his brother-in-law, who, being conscious what a false traitor he had been, feared the union of the two kings might be destructive to him; he immediately hastened to tell Canute what he had done, who had the greatest abhorrence of so barbarous an action, though he dissembled it for the present, and promised to advance Edric above all the peers of the realm. He was as good as his word; for, not long after, he ordered him to be beheaded, his body to be thrown into the Thames, and his head to be fixed on the highest gate in London. Edmund left two sons, Edmund and Edward, by his wife Algitha. He was buried at Glastonbury; and with him the Saxon Monarchy in England in a manner ended, having lasted 190 years from Egbert's establishment; 432 from the foundation of the heptarchy; and 568 from the arrival of Hengist. This prince, during his short reign, exhibited proofs of the most undaunted courage, invincible fortitude, consummate prudence, and sublime generosity.

EDRED, succeeded Edmund I. in 948. The Danes, according to their usual custom upon the accession of a new king, began to revolt, and gained over to their side Malcolm, king of Scotland; but Edred marched into Northumberland, and obliged them to sue for peace; upon which Malcolm struck up a peace with Edred, and paid him the stipulated homage. But the Danes would not yet be quiet; he therefore marched into the north made a terrible slaughter among the rebels, and laid waste the country for several miles. Edric fled into Scotland, and the Northumbrians threw themselves upon Edred for mercy; he generously replaced Edric on the throne, only imposing a tribute on him, and making him swear allegiance to him. But the perfidious Danes laid an ambush for him, as he was returning towards Wessex, and fell suddenly on his rear. Exasperated to the last degree, he returned, divested Northumberland of its royalty, and reduced it to a province; making earl Osulf, an Englishman, the first governor. Edred, now absolute lord of all England, governed his kingdom in perfect tranquillity, and turned his thoughts wholly to religion, wherein he was implicitly directed by Dunstan, abbot of Glastonbury, who had in every thing the ascendent over him; by his advice he rebuilt Glastonbury church and monastery; he also rebuilt Croyland and Abington monasteries. Edred died in the 10th year of his reign, in 958.

EDU'CTION, *s.* the act of bringing any thing into view.

To EDU'LCORATE, *v. a.* [from *dulcis*, sweet, Lat.] to sweeten.

EDULCORA'TION, *s.* in pharmacy, the sweetening of a thing by means of honey, sugar, or syrup. In chemistry, the act of freshening or cleansing a thing from its salts by frequent washing in water.

EDWARD the Elder succeeded Alfred in the year 900. Ethelward, son to Alfred's elder brother Ethelbert, aimed at the crown; but meeting with no encouragement from the English, he applied himself to the Danes, who immediately proclaimed him king of England, pretending, as they were possessed of half the kingdom, they had as much right to make a king as the West-Saxons. Edward marched directly against them, and they were obliged to abandon their new-made king Ethelward, and banish him out of their country. Ethelward went over to France, and in a short time returned with a large body of Normans, landed them in Essex, and soon made himself master of that province. This encouraged the Danes to take up arms again in his favour. Edward obtained many victories in this war. Ethelward was slain in battle in 905, in which battle (which was very obstinate and bloody on both sides) king Edward lost many of his nobles, and the Danes their king Eolrick. They continued the war two years after, yet they were constrained at last to sue for peace, which they obtained, on condition they would own Edward as their sovereign, and the Normans should return to France. In 910 the war broke out again, and Edward soon beat the Danes in two engagements, and at last quite expelled them out of the kingdom of Mercia. This war lasted, with some intervals of respite, 12 years, in which time a great number of battles were fought, and the Danes continually lost ground, till Edward obliged them to lay down their arms, and acknowledge him once more as their sovereign. After the peace was concluded with the Danes, A. D. 922, Edward marched against the Welsh, obtained a signal victory over them, and compelled the Welsh king Rees ap Madoc to sue for peace, promising to pay the usual tribute for the future. The Cumberland Britons likewise submitted to Edward. He died in the 25th year of his reign, A. D. 925, and was interred at Winchester.

EDWARD the Younger succeeded Edgar in 975. There were great contentions about the succession. The monks and their party were for Edward, Edgar's eldest son, now about 14 years of age: and the nobles, who were uneasy at the power and great wealth heaped upon the monks, were for Ethelred. In the mean time, Dunstan, fearing to be outvoted, taking advantage of the favour of the people, who had an high opinion of his sanctity, rises on a

sudden, and leads prince Edward by the hand towards the church, and there anoints him king. The nobles murmured at this; but seeing he had the people to back him, they were forced to acquiesce. Dunstan immediately assumed the regency. King Edward, after he had reigned little more than three years, came to a tragical end in 979. As he was one day returning from hunting, and came near Corfe-castle, in the isle of Purbeck, in Dorsetshire, where his step-mother Elfrida and her son Ethelred resided, he rode off from his company to pay her a visit. Elfrida, being informed the king was at the gate, ran to receive him, and pressed him to alight. As he only designed to pay his respects to her as he passed by, he desired a glass of wine to drink her health; which being brought to him as he sat on his horse, the innocent king no sooner lifted the glass to his mouth, but a villain, at the private instigation of the cruel queen, stabbed him in the back with a dagger. He was succeeded by Ethelred, 12 years of age.

EDWARD the Confessor, son of Ethelred and Emma, succeeded Hardicanute, June 8, 1041. He had spent great part of his life in Normandy. Goodwin, who had made him swear that he would marry his daughter, convened a general assembly, and got Edward acknowledged and proclaimed king of England. Edward was a man of weak understanding, which gave Goodwin an opportunity of rising to an exorbitant heighth of power. He bore a very great hatred against Goodwin and his whole family in his heart, which was the reason of his deferring his marriage with his daughter Editha as long as possible; however, after a delay of two years, as he really stood in fear of her father, he espoused her, but never consummated the marriage. He went hastily to Windsor, where his mother's treasures lay, seized them all, and stript her of every thing, leaving her only a small pension for her life, and had her confined ten years like a prisoner at Winchester, where she died 1052. Several circumstances concurring, the king and Goodwin came at last to an open rupture; but what brought things to a crisis, was the following incident. Eustace, earl of Boloign, having paid a visit to king Edward, was returning to France, and at Dover one of his people picked a quarrel with a townsman, and killed him. This occasioned a great insurrection of the inhabitants, in which 20 of the earl's people lost their lives. Upon this, the king ordered Goodwin to go with some troops, and chastise the rioters; but he absolutely refused, saying justly, that it was not the custom of England to punish men unheard. Edward now came to a fixed resolution to punish the earl for this disobedience; Goodwin, having intelligence of it, raised forces to defend himself. However, by the advice of a general assembly convened at Gloucester, a peace was patched up for the present; but it did not last long. Goodwin and his sons, refusing to appear before the general assembly, were banished the realm, and accordingly they passed over sea. They returned in a hostile manner, and entered the Thames with a fleet of ships; but an accommodation was once more agreed on. A little after, William the Bastard, Duke of Normandy, arrived in England, to pay a visit to king Edward. In 1051, Edward abolished for ever the tax called Danegeld, which amounted to 40,000£ a year, and had been paid for 38 years. In 1053 earl Goodwin died. In 1054 the Welsh made an inroad into England, and plundered Hereford; but earl Harold, son of Goodwin, marched against them with an army he had himself raised, put them to the rout, and drove them out of the country, which raised him very much in the esteem of the people, and they began to talk openly that no man was so worthy to succeed to the crown as Harold. The king, to defeat Harold's hopes, sent for his nephew Edward, son of Edmund Ironside, out of Hungary; he accordingly came over to England, with his son Edgar Atheling, and his two daughters, 1057; but died soon after his arrival. In 1063 the Welsh again renewed their incursions, and were again repulsed by Harold and his brother Toston, who obliged them to dethrone Griffin, and become tributary to England. The Northumbrians, being grievously oppressed by Toston their earl, rose up in arms, and expelled him their country. Harold was sent to chastise them, and restore his brother; but the people made such remonstrances to him of Toston's ill government, that he obtained their pardon, and procured another governor. This entirely gained him the affections of the whole people, for his equity and justice. Whilst Harold was using all the address he was master of to procure his succession to the crown, king Edward gave himself no trouble about it, but was wholly engaged in building the church and monastery of Westminster. He just lived to see them finished, and the ceremony of their dedication performed; and, dying in the 24th year of his reign, A. D. 1065, was buried in the sepulchre he had provided for himself in Westminster-abbey; which he built. He was the last king of Egbert's race, though not the last Saxon king, since Harold was of that nation, though not of the blood royal. The mental qualities of Edward did not at all answer to the dignity of his person. He was weak, indolent, and irresolute, and the attachment to his own ease tended in a great measure to the tranquillity of his reign. He seems to have been void of natural affection, and indeed of every other passion that kindles any warm emotion in the human heart. He was equally free from pride and ostentation, moderate in his appetites, complacent in his deportment, charitable to the poor, and extremely punctual in the performance of all religious duties; so that he acquired among the vulgar the title of Saint and Confessor, by which epithet he was canonized by pope Alexander III. about 200 years after his death. His prophecies and revelations are no other than the dreams of superstition; and, as for his curing scrofulous tumors and ulcers by the touch, the sensible part of mankind is by this time very well convinced, that neither he who exercised this apostolic function, in imitation of the French kings, nor any of his successors, ever contributed to the recovery of one patient, by any inherent personal virtue derived from heaven. The passive humanity, or rather easiness of his life, appears from some private incidents of his life, which are very often more characteristic than those transactions of importance which are the effects of counsel and deliberation. One day, while he reposed himself upon a couch, a page, who little dreamed that he was in the apartment, finding an iron chest open, filled his pockets with the silver it contained; but not satisfied with his booty, he had recourse to it again; when the king, thinking him perhaps too unconscionable, "Boy, (said he very deliberately,) you had better be satisfied with what you have got; for, if Hugolin, my chamberlain should come in, you will lose the whole, and be severely wipt into the bargain." Before the reign of Edward, the countries of Wessex, Mercia, and Northumberland, were governed by their own peculiar laws; but he reduced them all into one body, and ordained they should be observed in common through the whole kingdom. These were called Edward's laws, in contradistinction to those of the Norman kings, which were introduced in the sequel.

EDWARD I. eldest son of Henry III. who succeeded to the crown of England upon the death of his father, Nov. 16, 1272, was at that time on his return from the Holy Land, and was crowned Aug. 19, 1274, with Eleanor his queen, sister of the king of Castile, who attended him in his expedition: Alexander III. king of Scotland, the duke of Bretagne, and all the lords of the realm, being present at the solemnity; on which occasion 500 horses were let loose about the country for all that could catch them to keep them. The first thing he did after his coronation was to rectify the abuses in the administration of justice, and the parliament enacted some good laws, which were called the statutes of Westminster. Afterwards, he marched with a great army into Wales, and made Llewellyn their prince, who had attempted to throw off the yoke, sue for peace, which was granted on hard terms; but Edward afterwards generously relaxed them, being satisfied with thus mortifying his enemy. In 1279, the earldom of Ponthieu and Montreuil fell to Edward, in right of his queen, upon the death of the queen of

Castile her mother. The coin having been very much adulterated, and information having been given that Jews were chiefly concerned in it, the king caused all that were in the nation to be seized in one day, and 280 of them, being convicted of clipping and coining, received sentence of death, and were executed accordingly. About this time the statute of Mortmain passed, to put a stop to the prevailing practice of persons alienating their lands to the church. In 1289 (though some say several years after) the statute of QuoWarranto was passed, occasioned by many persons, during the late troubles, appropriating lands to themselves to which they had no right, by which statute they were obliged to shew their claim; but the king, either through ill advice, or the desire of keeping up money, issued out a proclamation for all that held lands of the crown to lay their title before the judges. The earl of Warren appearing, and being required to shew his title to his lands, drew out an old rusty sword, and said, "It was by this my ancestors gained their estate, and by this will I keep it so long as I live." This brave and bold answer opened the king's eyes, and, thinking better of the matter, he recalled the proclamation. Llewellyn, having revolted at the instigation of his brother David, committed great ravages on the borders, and defeated the king's generals: but Edward, marching with a numerous army into Wales, totally routed Llewellyn's forces in a great battle, in which Llewellyn himself was slain; and the king caused his head, crowned with ivy, to be exposed to view on the walls of the Tower of London. David his brother, the last of his race, was cruelly put to death as a traitor, and his head fixed up by his brother's, and his four quarters sent to York, Bristol, Northampton, and Winchester. After the defeat of Llewellyn, Edward, with ease, became master of the whole country, and Wales was united to the crown of England in 1283. The queen lay in at Caernarvon, where she was brought to bed of a prince, named Edward, who, when he was 17 years of age, was invested with the principality of Wales; and from that time the king's eldest son has been always prince of Wales. In 1287, king Edward, leaving the regency to the earl of Pembroke, went over to France, where he stayed three years. Being returned into England in 1289, he set about reforming abuses in the administration of justice, punished several judges who were found guilty of taking bribes, and obliged them to swear for the future they would take neither money nor presents, but a moderate breakfast. The next year the Jews were all banished the kingdom. Upon the death of Alexander III. there arose great disputes in Scotland about the succession. The chief of the claimants were John Baliol and Edward Bruce, who in order to prevent a civil war, chose the king of England arbitrator of their differences; but, before he could proceed to a decision, he declared that he acted in this affair as sovereign lord of all Scotland, and required the states to own him as such, which, though they never expressly did, yet they did not directly oppose his pretensions: however, he was owned as sovereign by all the claimants, and decided in favour of Baliol, whom he declared king of Scotland; upon which he swore fealty, and did homage to king Edward. But Baliol, being afterwards absolved from his oath of fealty by the pope, upon the king of England's treating him in an imperious manner, was determined to throw off the yoke; and took the opportunity of Edward's being at war with France to send a letter to him, renouncing the homage he had paid him; which so exasperated him, that in 1296 he marched his army designed for France into Scotland, and made himself master of that kingdom, and Baliol came and resigned his crown to him. Edward returned to England, carrying with him the crown and sceptre of Scotland, with the rest of the regalia, and the famous stone of Scone, on which the inauguration of the kings was performed. Prince Edward, being left regent on the king's going to Flanders, having assembled the parliament, which granted him a large subsidy, confirmed king John's two charters by an authentic act which the king put the great seal to in Flanders. While the king was abroad the Scots revolted, and drove the English out of all their strong places in Scotland, leaving them only the single town of Berwick upon Tweed. Edward, upon this, returned forthwith to England, and met the enemy at Falkirk, where he totally routed them, retook all the strong places he had lost, and returned to England. This was in 1298. The next year the whole kingdom rose, and drove the English once more out of Scotland. Edward, enraged at this, entered that kingdom a third time in 1300, and entirely routed the Scotch army. Edward refusing to accept their offers of submission, the Scots, in despair, offered the sovereignty of their country to Boniface VIII. who readily accepted of it. But Edward had so little regard to the pope's pretensions, that he swore if he heard any more of them, he would destroy Scotland from sea to sea; however, at the instance of the king of France, he granted the Scots a truce; but, on the expiration of it, he sent an army into Scotland, which being divided into three parts to ravage the country, were all routed in one day. Having now concluded a peace with France, in 1303, by which Guienne was restored to Edward, he entered Scotland with so numerous an army, that he met with no resistance, and penetrated to the utmost bounds of the island, laying waste the country on all sides, and took Stirling castle. At his return into England, he publicly imprisoned Prince Edward his son, for having committed some outrage against the bishop of Litchfield. The Scots, though often subdued, revolted again, and were again subdued. Edward, upon his return, banished Gaveston, as a corrupter of the prince, and made the prince to swear never to recal him. The Scots again took up arms under Bruce, who attacked the earl of Pembroke, the king's general in Scotland, defeated him, and took the earl prisoner, after which he gained several other advantages. Edward was now so exasperated against the Scots, that he made vast preparations to destroy them; but he was seized with a distemper at Carlisle, and died at Burgh upon the Sands, in Cumberland, on July 7, 1307, aged 68 years, having reigned 34 years, 7 months, and 20 days. When he was near his end, he advised his son to carry his bones at the head of his army, assuring him the rebels could never withstand the sight of them. He ordered him to send his heart to the Holy Land, with 32,000*l.* for the maintenance of the holy sepulchre, and commanded him never to recal Gaveston. The constitution of parliament, such as it is at this day, was so well established in his reign, that an additional law was made to the great charter, which enacted that no tax should be levied on the people without the consent of the commons. He had, by Eleanor of Castile, four sons and nine daughters; but Edward his successor was the only one of his sons who survived him. By Margaret of France, his second wife, he had two sons and a daughter. Eleanor his queen died in 1297, in memory of whom he erected a cross wherever her corpse rested in the way from Lincolnshire to Westminster. Edward was tall, graceful, and majestic; his constitution was robust and vigorous; and his features were regular and elegant. He excelled in those accomplishments which captivate the affections of the superficial admirers of exterior performances. He distinguished himself above most of his contemporaries, by his activity and skill in equestrian exercises, in the sports of the field, and in the manœuvres of chivalry. His address was engaging, and his elegance of manners attracted the admiration of those who enjoyed his society. In conversation he was affable, eloquent, and persuasive; mingling the effusions of pleasantry with the most pertinent observations. In private life, he was a strict observer of the laws of honour, and of the dictates of truth. He was a pattern of filial piety, a chaste and affectionate husband, a kind though vigilant parent, an humane and friendly master.—"By his ability and courage," says a modern writer, "he eminently contributed to the suppression of an alarming rebellion, which had shaken to its centre the throne of his imbecile father. By his policy and judgment, he had imparted strength to the government, and vigour to the execution of the laws, which, amidst the indolence and neglect

of Henry, had been rarely enforced. To the laurels acquired in his native country, he had added the fame of gallant exploits in the plains of Asia; and had revived among the infidels in Palestine the memory of English valour." The same author pleasantly remarks, that, "The strength of his constitution appears from his procreative powers; for his last child was begotten after he had entered into his sixty-seventh year." He was celebrated for his judgment, penetration, prudence, and sagacity. He was so cautious and circumspect, that he never brought himself into any dilemma; and possessed such presence of mind, that, when by a concurrence of unavoidable and disastrous circumstances he was involved in any difficulty, he never failed to extricate himself with equal honour and address. His noble achievements in Palestine, France, Wales, and Scotland, pronounce him an accomplished general; nor was he less distinguished for his legislative capacity. His merit as a legislator procured him the appellation of the Justinian of England; for not to mention the many excellent statutes which were promulgated during his reign, he reformed the administration of justice, and ascertained the proper limits between the different courts of judicature; introduced a new and easy method of collecting the public taxes; reduced the extravagant power of the pope and clergy, and enacted many wise and salutary laws for preserving the peace of the kingdom, and maintaining order and regularity among his subjects. But whatever his panegyrists may have said, Edward's character is far from being free from blemish or imperfection. There are some vices in the composition of this prince, which render his claim to extravagant commendation much weaker than that of many other princes. These were, disregard to justice where his own passions were concerned, an immoderate ambition, a propensity to despotic acts, and an occasional adoption of sentiments of barbarity and revenge. These imputations on his memory are sufficiently proved by the genuine narrative of his reign.

EDWARD II. king of England, was about 22 years of age when he succeeded his father Edward I. and began his reign by recalling Gaveston, a native of Gascony, the debaucher of his youth, contrary to his father's last command, and his own oath; on whom he heaped numberless favours. He married Isabella of France, daughter of Philip the Fair, at Boulogne, and appointed Gaveston guardian of the realm during his absence; which so exasperated the barons, that they entered into a league to prevent his coronation upon his return; but, on his promising in the next parliament to grant them all they could desire, he was crowned by the bishop of Winchester, February 24, 1308, when he took an oath to preserve the laws, customs, and liberties granted to the clergy and people by St. Edward. However, Gaveston still governed with an absolute sway, and behaved with great insolence; which so provoked the lords, that they got the parliament to join with them to demand Gaveston's banishment, which the king finding he could not avoid, made him governor of Ireland. However, he was soon recalled; upon which the barons obliged the king to place the government in the hands of 21 lords (called ordainers) chosen by parliament, who banished Gaveston; but he was soon recalled as before. And now several of the noblemen, entering into a confederacy, raised forces, and marched to York, where the king with his favourite were taking their diversions; but, upon notice of their approach, he left the place. Gaveston was taken some days after in Scarborough castle, and, after a hasty trial, beheaded; and an accommodation was afterward effected between the king and the barons, and peace restored in 1313. The same year the queen was delivered of a son, who was named Edward. The Scots, taking advantage of the commotions in England, drove the English out of their country. On June 25, 1314, was fought the battle of Bannockburn, in which the English army was totally routed, with a dreadful slaughter; and the Scots made several incursions into England, and ravaged the borders in a terrible manner, till a truce was made for two years. In 1323 king Edward marched his army into Scotland; but was obliged to retreat for want of provisions, and the Scots pursued him, and ravaged the country to the very walls of York; at last a truce was agreed on for thirteen years. Another war was upon the point of breaking out between the king and the barons, when matters were made up in 1318. The lords, jealous of the king, placed a young gentleman, named Hugh Spencer, about him as a spy, and got him made high chamberlain; but he had the art of insinuating himself so much into the king's favour, as to be made a confidant, and possessed the place of Gaveston in his heart; and he and his father, whom he made earl of Winchester, had the whole management of affairs in their hands: upon which the barons entered into a confederacy, levied troops, and then so vigorously petitioned for the removal of the Spencers, that the king durst not refuse their demands, and the parliament passed an act for their banishment, which was accordingly put in execution. But now affairs began to be in a flame again, by means of the queen, who having received some affront from the governor of Leeds, which belonged to one of the associated barons, she spurred the king to revenge against the whole body, who having taken the castle of Leeds, hanged the governor, and then turned his arms against the barons. He took Warwick castle, and some others; and then thinking himself strong enough to stand against all opposers, he recalled the two Spencers. Most of the confederate barons threw themselves upon the king's mercy; as to those who stood out, many of them were put to death, some fled the kingdom, and others were imprisoned, among whom was Mortimer, whom the Spencers confined in the Tower. The earl of Lancaster, with what troops he could raise, retired into the North, in order to join the Scots; he was taken and beheaded at Pontefract, 9 lords of his party were executed at York, and others in other parts of the kingdom. The Spencers now exercised their exorbitant power without control; and Mortimer, after having been twice condemned, and twice pardoned by the influence of the queen, made his escape to France, where the queen soon followed, under pretence of bringing about an accommodation between her brother and her husband, but with a full intention to be revenged on the Spencers, who had taken all occasions to mortify her; and afterwards got her son over, to do homage for Guienne and Ponthieu, which she had persuaded his father to resign to him. Edward sent letter after letter, commanding the queen to return with her son; but she always made some excuse or other, all the while plotting to dethrone her husband. All the English who had taken refuge in France, or had been banished, came in to her; among whom was Roger Mortimer, who became her chief counsellor. On Sept. 22, 1326, she embarked with a body of forces, though trusting more to her friends in the kingdom. Accordingly she was no sooner landed, than several lords joined her with a great number of forces; so that the king being deserted by all, concealed himself in the abbey of Neath. He had left Spencer, the father, in Bristol, which being soon taken, the old man was immediately hung up in his armour, without any formality. The city of London declared for the queen; and the bishop of Exeter, who endeavoured to keep it for the king, was beheaded by the populace. Prince Edward was now declared guardian of the realm; and search being made for the king, he was soon found where he lay concealed, having with him only young Spencer, Chancellor Baldock, Simon de Reading, and a few domestics, every body else having deserted him. With these the unhappy king was conducted to Monmouth castle, and the bishop of Hereford was sent to demand the great seal of him; which he delivered up for the queen and prince, to make use of as they thought proper. The queen, having got the great seal, called a parliament in the imprisoned king's name; but before it met, she caused Spencer to be hanged on a gibbet 50 feet high, and Simon de Reading on one 10 feet lower. The parliament being met, Jan. 1327, unanimously agreed, that the king should be deposed, and Edward his son made king in his

room. The substance of the charge exhibited against him was, that he had not governed according to the laws of the land; in short, that he was found incorrigible, and without hopes of amendment. Prince Edward was immediately proclaimed king in Westminster Hall, by the name of Edward III. But the generous young prince vowing he would not accept of the crown without his father's consent, it was thought necessary to send commissioners to oblige the king to resign the crown to his son. The king came out in a mourning habit, and fainted away. On his coming to himself, they represented to him the ill consequence that might attend his refusal; upon which he delivered the crown, sceptre, and other ensigns of royalty, into their hands, and made a formal resignation of the regal authority; upon which Sir Thomas Blount, the high constable, broke his staff, and declared all the king's officers discharged. Thus ended the reign of Edward II. Jan. 20, 1327, in the 20th year, and 43d of his age. Besides Edward, who succeeded him, he had another son, called John of Eltham, and two daughters, Joanna, married to David king of Scots, and Eleanor, wife of the duke of Guelder. Edward is said to have resembled his father in the accomplishments of his person, as well as in his countenance; but in other respects he seems to have inherited only the defects of his character; for he was cruel and illiberal, without his valour or capacity. He had levity, indolence, and irresolution, in common with other weak princes; but the distinguishing foible of his character was that unaccountable passion for the reigning favourite, to which he sacrificed every other consideration of policy and convenience, and at last fell a miserable victim. In this reign there was the most terrible earthquake that had ever been felt in England, and a dreadful famine, which lasted three years, and destroyed a vast number of people. During this time, the brewing any sort of beer was prohibited on pain of death, that the corn which used to be consumed that way might be applied to the making of bread. This period is also remarkable for the total suppression of the knights Templars, not only in England, but all over Christendom; and their estates were assigned to the knights of St. John of Jerusalem, now called knights of Malta. This suppression was said to be owing to their enormous vices.

EDWARD III. was proclaimed king on Jan. 20, 1327, and was crowned on the 26th at Westminster, being then in the 14th year of his age. The beginning of his reign gave people room to think they had not changed for the better, which was owing to the bad administration of the queen, who was directed in every thing by Mortimer, who acted more like a sovereign than a subject; and though the parliament had appointed 12 regents during the king's minority, yet Isabella had seized the government into her own hands. King Robert Bruce, thinking to take the advantage of Edward's minority, broke the truce with the English, and sent an army of 20,000 men to ravage the country bordering on Scotland. Edward, exasperated at this, marched an army of 60,000 men, including the Hainaulters, lately brought over; but just as the king was going to head them at York, a quarrel arose between the English and Hainaulters, which came to blows, and a great deal of blood was spilt. This occasioned their stay at York longer than was convenient, which gave the Scots opportunity of ravaging the country, and posting themselves so that the king could not come to give them battle. The late king was all this time a close prisoner in Kenilworth castle. His harsh treatment began to raise compassion in the people, and Henry of Lancaster entertained some thoughts of setting him at liberty. To prevent this, Lancaster was discharged, and Sir John Maltravers and Sir John Gurney, two men of a brutish disposition, were appointed in his room. They were ordered to remove him from Kenilworth to Berkley castle, where they received orders to put him to death, which they executed in a barbarous manner: they put a pillow on his face to keep him from crying out, thrust a pipe up his fundament, that no scar might appear, and through it run a red-hot iron into his bowels; in which exquisite torture he expired, after he had been deposed about eight months. The wretches who perpetrated this horrid murder came to miserable ends; Gurney dying abroad by the hands of the executioner, and Maltravers perishing in exile. His body was buried in a private manner, in the abbey-church at Gloucester, and it was given out that he died a natural death. In 1328, the young king's marriage with Philippa of Hainault was solemnized, and the same year a treaty of peace was made with Scotland; king Edward renouncing all pretensions to that kingdom, and the princess Joanna, his sister, being given to prince David, the king of Scotland's son. Charles, the brother of queen Isabella, dying without male issue, Edward, as the next heir, sent to demand the crown of France; but Philip de Valois, cousin german to the late king, causing himself to be crowned, Edward was obliged to let the matter lie dormant for the present, and went over to France in 1329, to pay homage for Guienne and Ponthieu, having privately protested beforehand against the homage he was going to pay. Upon his return to England in 1330, the conduct of the queen and Mortimer were represented to him in such a light, that he caused them both to be seized at Nottingham; then calling a parliament, he told them that, with the consent of his subjects, he intended to take upon himself the government, though he was not at the age prescribed by the law; to which the parliament readily assented. The first thing he did was to seize the extravagant dower of the queen, amounting to two-thirds of the revenue of the crown, and then confined her in the castle of Rising for the remainder of her life, which lasted 28 years; and Mortimer was hanged as a traitor, on the common gallows at Tyburn. The same year the king had a son born to him, who was named Edward. The art of weaving woollen cloth was about this time brought from Flanders into England, by John Kempe, to whom king Edward granted his protection, and invited our fullers, dyers, and other artificers belonging to the manufacture, which has since proved so advantageous to England. Edward now intended to break the dishonourable treaty that queen Isabella and Mortimer had drawn him in to make with Scotland. He set Edward Baliol, son of John Baliol, whom Edward I. had made king of Scotland, upon the throne, and young king David was obliged to fly into France; soon after which Baliol was crowned at Scone, and did the same homage to king Edward for Scotland as his father had done to Edward I. The king of England marched an army to lay seige to Berwick, which was still in king David's hands. The regent of Scotland marched with a great army to his relief, but Edward met him at Halydon-hill, and in a bloody battle, A. D. 1333, entirely routed him; after which Berwick surrendered, which Edward annexed for ever to the crown of England. However, the Scots drove Baliol out of the kingdom; upon which Edward marched with a numerous army in 1335, and attacked Scotland by sea and land, whereupon they submitted. Edward returned to England, leaving the earl of Athol to command in his absence; who, as he was besieging Kildrummy, was attacked, defeated, and slain, by Dunbar and Douglas, who marched to the relief of the place. This occasioned Edward once more to march into Scotland, where he ravaged the counties that had revolted. Then, leaving a small army under Baliol, he came back to England, being now bent upon putting his project against France into execution. He maintained, that the Salic Law, in excluding females, did not exclude their male issue; and he was encouraged in his undertaking by Robert d'Artois whom Philip had disgusted. In 1337 he called a parliament, chiefly to settle the business of the woollen manufacture. He now created his eldest son duke of Cornwall, who was the first in England who had the title of duke; and ever since the eldest son of the king of England is by birth duke of Cornwall. The first step Edward took was to order the duke of Brabant to demand the crown of France in his name; at the same time making him his lieutenant-general for that kingdom, and

commanding the French, whom he styled his subjects, to obey him. In 1338 he set sail with a considerable fleet, and arrived at Antwerp, where he made a long stay, to settle some matters of importance. The first campaign was not opened till Sept. 1339, which ended without bloodshed. The next year Edward took the title of king of France, using it in all public acts, and quartered the arms of France with his own, adding this motto, *Dieu et mon droit*, God and my right. He soon after obtained a great victory over the French at sea; for with a fleet of 300 sail, attacking the French fleet of 400, he took or sunk almost all of them. However, a truce was agreed on, by the mediation of the pope, for three years. Edward also made a truce with David for two years, who was returned into Scotland with troops from France. While these truces subsisted, Edward called a parliament, in which he solemnly confirmed all the liberties contained in the great charter, and created his son Edward prince of Wales. In 1346, Edward landed in Normandy, with his son, the prince of Wales, who was now about 16 years of age; and, after ravaging the country, encamped at Cressy; and on August 26, 1346, a very obstinate and bloody battle was fought, which proved fatal to the French. The prince of Wales, young as he was, performed wonders. To him the victory was chiefly owing, the king his father leaving him the honour of it. Philip was wounded in the neck and thigh, and being forced to retire, the victory was soon completed. There were slain in this battle, the king of Bohemia, who was blind; the earl of Alençon, Philip's brother; the duke of Lorrain; the earls of Flanders and Blois; 1500 other eminent noblemen, and 120 knights; and above 80 French standards taken. It is said, that in this famous battle the English first made use of cannon, then unknown to the French. After this, Edward besieged Calais, which held out a year; and he at last reduced it by famine, and then consented to a year's truce. During the siege of Calais, the king of Scots advanced as far as Durham at the head of a numerous army; but queen Philippa, marching against him, defeated him, and took him prisoner. King David remained a prisoner eleven years, and then was released upon giving 20 hostages to pay 100,000 marks, at 10,000 a year, till all was paid. A ten years' truce was at this time concluded between the two kingdoms. David died in 1368, and left his crown to Robert Stuart, his nephew. Not long after the taking of Calais, Edward instituted the most famous order of knighthood in the world, viz. that of the Garter. About the same time, the merchants having complained of the depredations committed by some Spanish ships on the English coast, Edward did not disdain to go in person with some ships, and give chase to those corsairs. He took 26 of their large ships, sunk some, and dispersed the rest. Philip de Valois dying in 1350, left his son his successor, who prolonged the truce to 1354, and then to the year following; but it was ill observed on both sides. When it was near expiring, Edward invested the prince of Wales with the duchy of Guienne, and sent him thither to prosecute the war; who having advanced to the gate of Bourges, upon his return was met by the king of France with an army of 60,000 men, near Poictiers; and here a memorable battle was fought, on September 19, 1356, in which the prince of Wales, notwithstanding the vast superiority of the French, gained a complete victory, and took king John prisoner, with Philip, his fourth son. The duke of Bourbon, the constable of France, the marshal de Nelse, about 50 other great lords, and 800 gentlemen, were slain. A truce for two years was soon after agreed on; and the prince came over to England, bringing the captive king along with him, who was treated with the greatest respect by all the royal family. King John agreed upon a treaty with the king of England, in order to recover his liberty; but the states of France refused to ratify it; upon which Edward, in 1360, went over to France with an army of 100,000 men, with an intent to subdue the kingdom; but he did not carry his point; for though he ravaged the country to the very gates of Paris, yet he could by no means draw the dauphin and the regent out to an engagement; so that his army mouldering away with sickness, and tired with fruitless attempts, he consented to a treaty of peace, which was signed May 8, 1360, whereby the king of France was to pay three millions of crowns of gold for his ransom, and the king of England was to hold Guienne, Calais town, castles, and territories, and several other places; and king John was set at liberty, returned to France, and fulfilled the treaty. In 1663, king John came over to England again, about some matters of importance, and was very honourably received by king Edward. The kings of Scotland and Cyprus being in England at the same time, Sir Henry Picard, citizen and wine-merchant of London, entertained the four kings with their retinues with a magnificent feast at his own house. King John died in England April 8, following. In 1366, pope Urban V. in a haughty manner, demanded the tribute which king John of England obliged himself and his successors to pay to the holy see, of which there were 30 years due. But both king and parliament so vigorously opposed this imposition, declaring king John's engagement to be null, as without consent of parliament, and contrary to his coronation oath, that the pope thought fit to drop it; and neither Edward nor his successors had any more trouble on that head. In 1368, Edward lost his second son, Lionel, duke of Clarence. The year following, Charles V. of France broke the treaty of Bretagne, and declared war against Edward; and the English were so unfortunate as to be deprived of their late acquisitions in France, except Calais. However, a truce was concluded between the two crowns in 1374. At the beginning of this war queen Philippa died. King Edward, now in his old age, fell in love with Alice Perrers, one of the ladies of the bed chamber to queen Philippa, of whom he was so fond as to squander the public money on her. The parliament obliged him to send her away, but he soon recalled her. On June 8, 1376, died Edward prince of Wales, the delight of the nation, in the 46th year of his age. He was called the Black Prince, from his wearing black armour. The parliament attended his corpse to Canterbury, where he was interred. He had married Joanna, daughter of Edmund earl of Kent, who was beheaded by the intrigues of Isabella and Mortimer, at the beginning of this reign. By her he left one son, Richard, about ten years old, whom the king his grandfather created prince of Wales and earl of Chester, designing him for his successor. King Edward died at Sheen, June, 21, 1377, in the 65th year of his age, and 51st of his reign, and was buried in Westminster Abbey. This great prince, when he drew near his end, saw himself deserted by every body, Alice, his favourite, when she saw him dying, seized upon every thing that was valuable, even to the ring on his finger. He had, besides his two sons already mentioned, William, who died an infant; John of Gaunt, duke of Lancaster; Edmund, surnamed of Langley, earl of Cambridge, and duke of York; William of Windsor, who died young; and Thomas of Woodstock, duke of Gloucester. He had also five daughters. Edward III. was undoubtedly one of the greatest of England's princes, either as a warrior, a lawgiver, a monarch, or a man. He possessed the courage and romantic spirit of Alexander; the penetration, the fortitude, the polished manners of Julius; the magnificence, the liberality, the wisdom of Augustus Cæsar. He was tall, majestic, finely shaped, with a piercing eye, and aquiline visage. He excelled all his contemporaries in feats of arms and personal address; and was courteous, affable, and eloquent. He was a constitutional knight-errant; and his example diffused the spirit of chivalry through the whole nation. In imitation of the youthful monarch, who delighted in tilts and tournaments, every individual betook himself to the exercise of arms, every breast glowed with emulation, every heart panted with the thirst of glory; and when he took the field, there was not a soldier in his army who did not serve from sentiment, and fight for reputation. The love of glory was certainly the predominant passion of Edward, to the gratification of which he did not scruple to sacrifice the feelings of humanity, the lives of his

subjects, and the interests of his country, and nothing could have induced or enabled his people to bear the load of taxes with which they were encumbered in this reign, but the love and admiration of his person, the fame of his victories, and the excellent laws and regulations which the parliament enacted with his advice and concurrence. In this reign lived the famous Dr. John Wickliff, the first celebrated English reformer.

EDWARD IV. earl of March, son of Richard, duke of York, who was slain in the battle of Wakefield, was about 19 years of age when he was proclaimed king, on March 5, 1461, in the room of Henry VI. by virtue of an extraordinary kind of election; for the earl of Warwick having drawn up his troops in St. John's Fields, and caused the people who came out to see them to form a ring, he stood in the middle, and asked them with a loud voice, first, whether they would have Henry of Lancaster for king? They all cried, "No, No." Then he demanded of them, whether they would have Edward, son of the late duke of York, for their king? To which the whole multitude answered with loud acclamations, expressing their assent. This done, he assembled a great council of the nobles and magistrates, in and about London, who declared the crown was devolved on Edward, and accordingly made him an offer of it, which, with a great show of modesty, he accepted. In the beginning of his reign he caused a tradesman of London to be executed, for saying he would make his son heir to the crown; meaning, as he said, his own house, which had that sign. A few days after his proclamation, he put himself at the head of an army of 40,000 men, in order to march against queen Margaret, whose army was increased to 60,000, and gained a complete victory over the queen's army, in a great battle between Caxton and Tewton, in Yorkshire, which was fought on Palm Sunday, and continued from morning to night, in which it is said near 37,000 lost their lives. He then returned to London, where he arrived on June 8, and was crowned the 29th. Shortly after, king Edward called a parliament, which approved of his coronation, confirmed his title, and repealed all the acts which had been made against the house of York. Queen Margaret having received succours from France, entered Northumberland, with Henry and the prince her son, in 1463; but her army was defeated; and Henry, Margaret, and her son, escaped and fled into Scotland. Soon after Edward concluded a truce with France, with the duke of Burgundy, and with Scotland. Henry came privately into England, hoping to conceal himself there, till he should have an opportunity of escaping by sea; but unhappily, being discovered, and seized at Waddington hall, in Lancashire, whilst he was at dinner, he was, in an ignominious manner conducted to London, and confined in the Tower. Margaret went over, with the young prince, to René of Anjou, her father. King Edward granted pardon to all Henry's friends, excepting only Ralp Grey and Humphrey Nevil. In 1464 the king fell desperately in love with Elizabeth, daughter of Sir Richard Woodville, and widow of Sir John Grey. He made her his wife, and immediately created Sir Richard Woodville, the queen's father, earl of Rivers, who soon after was made treasurer and high-constable of England; and Anthony Woodville, his son, was married to the richest heiress in England. This marriage displeased the nation, particularly the earl of Warwick, who had just concluded a match for the king with the queen of France's sister, and who was resolved to use his utmost efforts to depose him. In 1469 he fomented an insurrection in Yorkshire, and the malecontents met the earl of Pembroke with the king's forces, near Banbury in Oxfordshire, where a battle was fought, in which Pembroke was defeated, and being taken, was beheaded by the rebels, with Sir Richard Herbert, his brother. In Northamptonshire the rebels went in a tumultuous manner to a mansion house of the earl of Rivers, the queen's father, seized him, and beheaded him at Northampton. The king, no way suspecting Warwick, granted him and his brother a commission to raise troops, which they did, and declared for the rebels. The king hereupon marched against them in person; and whilst a negociation was on foot, in order to an accommodation, the earl of Warwick attacked the king's camp in the night, put them in the utmost confusion, and took the king prisoner, who was conducted to Middleham castle, in Yorkshire; this was in 1470. Edward found means to make his escape, by bribing his guard, and went to London; and now both sides prepared for war. Sir Robert Wells went to raise forces in Lincolnshire, and was met by the king at Stamford, who routed his whole army, and Wells himself was taken and beheaded. Warwick and Clarence retired into France, to concert new measures. Lewis having furnished the earl of Warwick with money and troops, he set sail with the duke of Clarence, landed at Dartmouth, and his army was soon increased to 60,000. He forthwith proclaimed Henry VI. and marched in pursuit of Edward, who fled, and took refuge in Holland; and then, in Oct. 1470, the earl of Warwick released king Henry out of the Tower, after a six years' imprisonment, who was solemnly proclaimed on the 14th, as again ascending the throne. A parliament was now called, which met on November 20, and voted Edward a traitor and usurper, confiscated all his estates, annulled all the acts made in his reign, and declared all those to be rebels who had borne arms in defence of Edward's pretended right. The duke of Burgundy, to whom Edward had fled for protection, having furnished him with some money, ships, and men, he landed at Ravenspur, in Yorkshire, 1471; and, having gained over the duke of Clarence, marched to London, and entered the city amidst the acclamations of the people. Henry, after a seven months' phantom of sovereignty, was sent again to the Tower. On April 14th, a fierce battle was fought between the king and the earl of Warwick at Barnet, which began early in the morning, and continued till noon; but Warwick's army being overpowered, was put to the rout, great numbers being slain upon the spot, with the earl himself, and the Marquis of Montague, his brother. Queen Margaret, who, with prince Edward her son, was just arrived from France, was very much shocked with the news; and, abandoning herself to grief and despair, took sanctuary at the abbey of Beaulieu, in Hampshire. But the duke of Somerset, the earl of Pembroke, and the other lords, persuading her to try her fortune once more, by putting the prince of Wales, her son, at the head of an army, she consented, and those lords, in a very short time, got together a great number of troops. The king marched against them; and, coming up with them at Tewksbury, where they entrenched themselves, eight days after the battle of Barnet, entered their camp, and entirely routed them with a terrible slaughter. The queen, the prince of Wales, and the duke of Somerset, were taken; the last was beheaded; the prince, then 18 years old, was stabbed to death in cold blood; and queen Margaret was imprisoned in the Tower, where she remained till 1475, and was ransomed by Lewis XI. for 50,000 crowns. As to Henry VI. he was murdered in the Tower, in the 50th year of his age. The king, not content with the severity he had exercised against the Lancastrian party, completed the tragedy in 1478, by the death of his own brother, the duke of Clarence, being instigated thereto by the queen, the duke of Gloucester, and the rest of Clarence's enemies. And now Edward gave himself up to his pleasures, in which he was extravagantly profuse, which put him upon extorting money from his subjects by very cruel methods. He was seized with a violent fever, which carried him off on April 9, 1483, in the 42d year of his age, and 23d of his reign. He had a great many mistresses, among whom was Jane Shore, wife to a citizen of London. By his queen Elizabeth he had Edward, prince of Wales, who succeeded him; and Richard duke of York; Elizabeth, who was married to king Henry VII; Cicely, married to lord Wells; Anne, married to Thomas Howard, duke of Norfolk; Bridget, who was a nun; Mary, who died unmarried; and Catharine, whose husband was his William Courtney, lord of Devonshire. Edward was a prince of the most elegant per-

son and insinuating address; endowed with the utmost fortitude and intrepidity; possessed of uncommon sagacity and penetration; but, like all his ancestors, was brutally cruel and vindictive, perfidious, lewd, perjured, and rapacious, without one liberal thought, without one sentiment of humanity.

EDWARD V. then about 12 years old, was proclaimed immediately after the death of his father, though he was never crowned; being deposed by his uncle, Richard duke of Gloucester, who got himself to be proclaimed king, June 20, 1483, and afterwards procured the murder of his nephews, Edward V. and Richard duke of York, by two ruffians, who rushing into their chamber in the Tower, stifled them in their beds, and then buried them under the stair-case. This, Sir James Tyrrel, whom Richard had made governor of the Tower for this purpose, confessed at his execution in the next reign. However, as it was an opinion implicitly received, that the bodies had been removed, by Richard's orders, to consecrated ground, their bones lay undiscovered till the reign of Charles II. by whose orders they were put into a marble urn, and deposited among the monuments of the royal family, in the chapel of Henry VII. with a latin monumental inscription on it, of which the following is a translation: "Here lie the remains of Edward V. king of England, and of Richard duke of York. These unhappy brothers, who were shut up in the Tower, and there smothered with pillows, by order of their perfidious uncle, Richard, the usurper of the throne, were privately and indecently buried. Their most desired bones, diligently and often sought for in vain, July 17, 1674, one hundred and ninety-one years after their death, were dug up in the ruins of a stair-case, which formerly led to the chapel of the White Tower, and known by most undoubted tokens. The most compassionate king Charles II. pitying their severe fate, thought fit to order those most unfortunate princes this place among the monuments of their forefathers; in the year of our Lord 1678, and the thirtieth of his reign." Edward V. reigned 2 months and 12 days.

EDWARD VI. the only son of Henry VIII. by his queen Jane Seymour, succeeded his father at the age of nine years and three months, and was a prince of excellent qualities. He was proclaimed Jan. 31, 1547, by the name of Edward VI. and was crowned Feb. 20. The late king had appointed a regency during his minority, which was fixed to his 18th year. The regency being met, thought proper to choose a president, with the title of Protector of the Realm, and Governor to the King, who was to do nothing without the consent of the majority. The choice fell upon the earl of Hertford, the king's uncle, who was afterwards made duke of Somerset. In this reign many learned reformers took refuge in England, on whom king Edward bestowed pensions. In 1553, the young king fell into a consumption, and died July 6, being in the 16th year of his age, having reigned six years, five months, and nine days. He was a prince of fine accomplishments. He kept a journal, which is preserved in the British Museum, in which he regularly entered all the important transactions of his reign. He was remarkably pious, and continued firmly attached to those principles of the Reformation which he had imbibed while young, and which made a great progress in his reign. He confirmed his father's grant of Christ's and St. Bartholomew's hospitals, and founded Bridewell and St. Thomas's hospitals. He also founded several schools, which were mostly endowed out of the church-lands. Edward is celebrated by historians for the beauty of his person, the sweetness of his disposition, and the extent of his knowledge. By the time he had attained his 16th year he understood the Greek, Latin, French, Italian, and Spanish languages; he was versed in the sciences of logic, music, natural philosophy, and master of all the theological disputes; insomuch that the famous Hyeronymus Cardamus, in his return from Scotland, visiting the English court, was astonished at the progress he had made in learning, and afterwards extolled him in his works as a prodigy of nature. Notwithstanding these encomiums, he seems to have had an ingredient of bigotry in his disposition, which would have rendered him very troublesome to those of tender consciences, who might have happened to differ from him in religious principles; nor can we reconcile either to his boasted humanity or penetration, his consenting to the death of his uncle, who had served him faithfully, unless we suppose he wanted resolution to withstand the importunities of his minister, and was deficient in that vigour of mind, which often exists independent of learning and culture.

EDWY succeeded Edred in 958, and was no sooner on the throne than he commanded Dunstan, who had been treasurer to the late king, to give an account of the money entrusted to him. Dunstan refused to obey, alleging the money had been expended for pious uses. The king's council were not for pushing this affair any farther, for fear of the people, who had a high notion of Dunstan's sanctity, and an extravagant veneration for the monks and their religious houses; so that they branded every one who spoke against them as impious and profane. However, to mortify the abbot, the monks were turned out of the benefices they had invaded, and the secular priests restored. Upon this the monks vented the most bitter invectives imaginable. Dunstan who was supposed to be the chief author of these clamours, was banished, or, as some say, voluntarily retired to a monastery in Flanders. And now the monks, with all their might, cried down the government of the young king, and represented him as the most impious of men. This soon occasioned an insurrection in Mercia; and Edgar, the king's brother, headed the revolters; and, having secured that part of the country, he marched into Northumberland and East Anglia, where the Danes (always glad of a disturbance among the English) joined him. Edwy was unprepared to quell this rebellion, not imagining it was in the power of the monks to do so much mischief, and knowing that neither the people nor his brother had any just cause of complaint. Such, however, was the event, that he could only keep Wessex, which preserved its fidelity to him, and was forced to deliver up all the rest, of which Edgar was at length chosen the head, with the title of king of Mercia. Edwy did not long survive this partition; for being vexed at his being deprived of his dominions, and that the monks had thus got the better of him, he fell into a deep melancholy, which put an end to his life, after he had reigned a little above four years. He was buried at Winchester.

EDYSTONE, or EDDYSTONE ROCKS, in the English Channel, so called from the great variety of contrary sets of the tide or current which prevail near them. They are situated nearly S. S. W. from the middle of Plymouth Sound, distant from the port about 14 miles, and from Ram Head 12 and a half. As they lie nearly in the direction of vessels coasting up and down the Channel, they were very dangerous, and ships were sometimes wrecked on them, before the light-house was established here. They are so exposed to the swells of the ocean, from all the south-western points of the compass, that the heavy seas break on them with inconceivable fury. Sometimes, after a storm, when the sea is to all appearance perfectly smooth, the under current meeting the slope of the rocks, the sea beats upon them in a terrific and magnificent manner, and even rises above the light-house, overtopping it, for the instant, with a canopy of frothy wave. The present light-house is nearly 80 feet high, and has withstood the most violent storms, without sustaining the smallest injury. It was begun by the late Mr. John Smeaton, August 2, 1757, and finished August 24, 1759.

To EEK, *v. a.* [*eacan*, Sax.] to make bigger by the addition of another piece; to supply any deficiency, sometimes including the idea of bungling, or botching; used with the particle *out*.

EEL, *s.* [*al*, Sax.] in ichthyology, a genus of fishes whose general appearance has some resemblance to that of serpents. Many wonderful things are related concerning them, such as their migration over moist land from one piece of water to another. Their generation was long involved in much mystery, but it is now generally understood that they produce their young alive.

EFF. See Eft.

To EFFA'CE, *v. a.* [*effacer*, Fr.] to destroy any painting; to spoil the form of any piece of carving; to blot out: to destroy all marks or traces of a thing from the mind.

EFFE'CT, *s.* [from *effcio*, to accomplish, Lat.] that which is produced by an operative cause; a consequence; advantage; profit or service. In the plural, goods, furniture, or moveables.

EFFE'CTOR, *s.* [Lat.] one who produces any effect; one who is the cause of a thing.

EFFE'CTUAL, *a.* [*effectuel*, Fr.] producing the object, end, or design for which it is intended. Synon. With respect to these two words, that of *efficacious* seems not so powerful as that of *effectual*. The first gets the better of most obstacles; the last, of all. By an *efficacious* remedy we put an *effectual* stop.

EFFE'CTUALLY, *ad.* in such a manner as to produce the end for which it is applied.

To EFFE'CTUATE, *v. a.* [*effectuer*, Fr.] to bring to pass; to accomplish.

EFFE'MINACY, *s.* the acting like a woman; softness, or want of those qualities which distinguish and become a man.

EFFE'MINATE, *a.* [*effeminatus*, from *femina*, a woman, Lat.] void of the qualities which distinguish and adorn the male sex; acting or behaving like a woman; voluptuous; or luxurious.

To EFFE'MINATE, *v. a.* [*effemino*, from *femina*, a woman, Lat.] to make womanish.

EFFEMINA'TION, *s.* the quality or cause of rendering a person womanish.

To EFFERVE'SCE, (*effervéss*) *v. a.* [*effervesco*, from *ferveo*, to be hot, Lat.] to grow warm, to produce heat by fermentation, or the motion of the particles of a body among themselves.

EFFERVE'SCENCE, *s.* [*effervesco*, from *ferveo*, to be hot, Lat.] the production of heat by intestine motion. Among chemists, it is that intestine motion, excited in various fluids, either by the mixture of fluids with others of a different nature, or by dropping salts or powders of various kinds into fluids.

EFFE'TE, *a.* [*effatus*, from *ex*, which has here a negative signification, and *fœtus*, a young one, Lat.] barren; worn out with age.

EFFICA'CIOUS, (*effikáshious*) *a.* [*efficax*, from *efficio*, to effect, Lat.] producing the effect or end intended.

EFFICA'CIOUSLY, (*effikáshiously*) *ad.* in such a manner as to produce the effect or end intended.

EFFICACY, (*efficacy*) *s.* [*efficax*, from *efficio*, to effect, Lat.] the power of producing the end or effect intended. Applied to speech, persuasion.

EFFI'CIENCE, or EFFI'CIENCY, (*effishience*, or *effishiency*) *s.* [from *efficio*, to effect, Lat.] the act of producing effects or changes in things or persons; agency.

EFFI'CIENT, (*effishient*) *s.* [from *efficio*, to effect, Lat.] a cause; one that makes or causes a thing to be what they are.

EFFI'CIENT, (*effishient*) *a.* [from *efficio*, to effect, Lat.] having the power to produce or cause alteration or change in things, either by altering the qualities or introducing new ones.

EFFIGY, *s.* [*effcies*, from *effingo*, to fashion, Lat.] the resemblance or representation of any thing drawn, painted, or carved. An idea, applied to the mind.

EFFLORE'SCENCE, or EFFLORE'SCENCY, *s.* [*efflorescо*, from *flos*, a flower, Lat.] in botany, a production of flowers. In natural history, an excrescence in form of flowers. In medicine, a breaking out of some humours, &c. in the skin.

EFFLORE'SCENT, *a.* [*efflorescо*, from *flos*, a flower, Lat.] shooting out in the shape of flowers. In medicine, appearing in pimples, or other eruptions on the skin.

EFFLU'ENCE, *s.* [from *effluo*, to flow out, Lat.] that which flows from some other principle.

EFFLU'VIA, or EFFLU'VIUM, *s.* [from *effluo*, to flow out, Lat.] the small particles continually emitted by, or flowing from a body, which, though they do not sensibly decrease the body from whence they proceed, have perceptible effects on the senses.

EFFLUX, *s.* [*effluxus*, from *effluo*, to flow out, Lat.] the act of flowing out; effusion; spreading; or the visible effect of some cause; that which flows from something else; an emanation.

To EFFLU'X, *v. n.* [from *effluo*, to flow out, Lat.] to flow from; to move in succession.

EFFLU'XION, *s.* [*effluxio*, from *effluo*, to flow out, Lat.] that which flows out. The action of flowing out.

EFFUMABI'LITY, *s.* [from *fumus*, smoak, Lat.] the quality of flying away, or vapouring in fumes.

To EFFU'SE, (*effúze*) *v. a.* [*effusus*, from *e*, out of, and *fundo*, to pour, Lat.] to pour out; to spoil.

EFFU'SION, *s.* [*effusio*, from *effundo*, to pout out, Lat.] the act of pouring out; shedding; the act of uttering or pronouncing with fluency; profusion, or generous giving. Figuratively, the thing poured out.

EFFU'SIVE, (*effúzive*) *a.* poured out.

EFT, *s.* [*efeta*, Sax. called likewise an *evet*] a small kind of an animal, having four feet and a long tail, resembling the lizard, or crocodile, and to be found in watery places.

EFTSOONS, *ad.* [*eft* and *soon*, Sax.] soon afterward; in a short time; again. Obsolete.

E'GBERT, king of Wessex, became monarch of England, by the conquest of the other kingdoms, in the year 827 or 828. Before the reduction of the heptarchy, he subdued the Britons in Cornwall, and also those of Vendosia, which was one of the three kingdoms into which Wales was divided. After he was crowned king of England (being the first) he reigned in peace for some time, enjoying the fruits of his victories. In 833, the Danes arrived at Charmouth, in Dorsetshire, with 35 vessels, and, meeting with no opposition, furiously ravaged the country. Egbert marched against them, and was entirely defeated, after a long and bloody battle; and Egbert himself narrowly escaped, by the favour of a dark night. In 835, another body of Danish pirates landed near Hengston-hill, in Cornwall, over whom Egbert gained an entire victory. Egbert reigned in all 37

years as king of Wessex only; seven years as monarch, or chief, of the seven kingdoms; and 10 years as real monarch, or king of all England. He died in 838, and was buried at Winchester.

EGG, *s.* [*æg*, Sax.] in natural history, a part formed in the females of certain animals, which under a shell, more or less spherical, includes the young of the same species.

To EGG, *v. a.* [*eggian*, Sax.] to incite; to instigate; to induce a person to prosecute an action with vigour.

E'GLANTINE, *s.* [*eglantier*, Fr.] a kind of wild rose.

E'GOTISM, *s.* [from *ego*, I, Lat.] a fault committed in writing or discourse, including too frequent and ostentatious an use of the pronoun I; too frequent mention of a person's self in writing or conversation.

E'GOTIST, *s.* [from *ego*, I, Lat.] one who often repeats the word I; a person who mentions himself too frequently, and with ostentation.

To E'GOTIZE, *v. n.* to mention one's self too frequently and too ostentatiously.

EGRE'GIOUS, *a.* [*egregius*, Lat.] somewhat above the common or ordinary run; remarkable; worthy of notice, or extraordinary either in a good or bad sense, but generally in a bad one.

EGRE'GIOUSLY, *ad.* better or worse than ordinary; uncommonly better or worse; prodigiously; extremely.

E'GREMONT, a town in Cumberland, with a market on Saturday. It is seated not far from the sea, on the banks of a river, over which there are two bridges; and on the top of a pecked hill a strong castle. It is 14 miles S. W. by S. of Cockermouth, and 299 N. W. of London.

E'GRESS, *s.* [*egressus*, from *e*, out, and *gradior*, to go, Lat.] passage out of a place; liberty to go out. In astronomy, the passage of the inferior planet Mercury or Venus, from off the sun's disk. When the planet begins to leave the disk, it is called *the beginning of the egress*; when its centre is going off, *the central egress*; and when it leaves the sun entirely, *the total egress*.

EGRE'SSION, *s.* [*egressio*, from *e*, out, and *gradior*, to go, Lat.] the act of coming out.

E'GRET, *s.* a fowl of the heron kind, with red legs.

EGRETTE, *s.* [Fr.] an ornament of ribbons, worn by ladies on the front part of their hair.

E'GYPT, a country of Africa, about 500 miles in length, and 160 in breadth. It is bounded on the S. by Nubia; on the W. by the Deserts of Barca, Fezzan, &c. on the N. by the Mediterranean; and on the E. by the Red Sea and the Isthmus of Suez. This country, so famous in history, seems not to have an extent proportionable to the pompous description which the ancients have given of its having contained 20,000 towns, or cities, and several millions of inhabitants, and of its ancient kings keeping armies of 300,000 men, and executing those prodigious works, the pyramids, the labyrinth, the immense grottos of Thebias; the obelisks, temples, and pompous palaces; the Lake Mœris, and the vast canals, &c. but when we consider the amazing fertility of the soil, enriched, as it has always been, by the overflowing of the Nile, and its high state of cultivation, these accounts seem more probable. Egypt has been ever noted for its plenty of corn; and when the dearth was in all lands, in the days of Jacob, in the land of Egypt there was bread; and all countries came thither to buy corn. Except in our winter months, the heat is oppressive to all who are not accustomed to it, and they are generally visited by the plague about once in seven years. The winds are sometimes of such extreme heat and aridity, that their influence proves mortal. During the time they last, the streets are deserted, and the inhabitants are almost blinded by drifts of sand, which are so subtile, that they insinuate themselves into the closets and cabinets. No country in the world is better furnished with corn, rice, flesh, fish, sugar, fruits, and vegetables, than Egypt. It is divided into the Upper, Middle, and Lower, which last comprehends the Delta, which produces oranges, lemons, figs, dates, almonds, cassia, and plaintains, in great plenty. The animals found in Egypt are hyenas, antelopes, apes with the head like a dog's; camels, black cattle, fine horses, and large asses, crocodiles, the camelcon, the ichneumon; ostriches, eagles, hawks, pelicans, and water-fowl of various kinds. The ibis, which resembles a duck, and was deified by the ancient Egyptians, on account of its destroying serpents and noxious insects, is not now found here. They have a serpent here, called the cerastes, or horned viper, the bite of which is mortal to those who have not the secret of guarding against it. The practise of charming, alluded to in Psal. lviii. 4, 5. Eccles. x. 11. and Jer. viii. 17. appears to prevail here till this day; for some of the natives can play with the cerastes, which to them is perfectly harmless, but when applied to a hen, or any other animal, it bites and instantly kills it. Since Egypt has been under the dominion of the Turks, it has been governed by a bashaw, who resides at Cairo. Under him are inferior governors in the several parts of the country. Those in Upper Egypt are generally Arabs, who pay tribute to the Grand Signior, and make presents to the bashaw, governing despotically, and making war with each other; besides these there are shieks, who preside over particular places, and are masters of a few villages. The present population of Egypt is computed at 2,300,000. The inhabitants are composed of four different races of people; the Turks, the Arabs, the Cophts, who are descended from the first Egyptians, which became Christians; and the Mamlouks, who were originally Circassian and Mingrelian slaves; and being the only military force, are the real masters of the country. The governors of the country are Mahometans; but the Cophts, Greeks, and Latins, are Christians of different sects; and in the great towns there are numbers of Jews. A considerable trade was carried on here in East India commodities, till the Portuguese found the way to Asia round the Cape of Good Hope. However, the merchants of Europe visit the harbours in the Mediterranean, and import and export several sorts of merchandise; and, from other parts, the natives get elephants' teeth, gold-dust, musk, civet, ambergris, and coffee. The gold-dust is brought from Negroland to Fez and Morocco, and thence to Cairo, in caravans, over immense deserts. The commodities which the merchants purchase here are coffee, senna, cassia, rhubarb, sal ammoniac, myrrh, saffron, salt-petre, aloes, opium, indigo, sugar, sandal-wood, dates, cotton, cloth, &c. The largest of the pyramids takes up ten acres of ground; and is, as well as the others, built upon a rock. The external part is chiefly of large square stones, of unequal sizes, and the height of it about 700 feet; within these, and in their vicinity, are catacombs, wherein are mummies, or embalmed dead bodies, which are three or four thousand years old. The complexion of the Egyptians is tawny, and the farther S. the darker, insomuch that those on the confines of Nubia are almost black. They are mostly an indolent people, especially the richer sort, who spend much of the day in drinking coffee, smoking tobacco and sleeping; and these are said to be ignorant, proud, and ridiculously vain. M. de Non says, "The houses of Upper Egypt are vast dovecots, in which the owner reserves only a chamber for himself, and there he lodges with the hens, chickens, &c. exposed to all the devouring insects which beset those animals. To catch these insects occupies his day; and the texture of his skin braves their bite at night." The principal city is Cairo. In 1798 the French, with an army of 40,000 men under Buonaparte, took possession of this country, after a feeble resistance from the natives; but, on the 8th of March, 1801, a British army effected a landing, and after some sharp conflicts (especially the battle of the 21st of March, in which the brave Abercrombie was mortally wounded) succeeded in bringing the French, then under general Menou, to capitulate for the evacuation of the country.

ELE'CTRE, or ELE'CTRUM, *s.* [from *elektron*, amber, Gr.] amber; which, having the quality, when warmed by friction, of attracting bodies, gave to one species of attraction the name of *electricity*, and to the bodies that so attract, the epithet of *electric*.

ELE'CTRICAL, *a.* belonging to electricity. There has been a considerable variety of electrical machines. That exhibited in the plate is selected on account of its being one of the most portable. It consists of a globe, rubber, and conductor, to which certain appendages are attached. The glass globe which appears on the left side of the plate, is turned by the winch by means of wheel work, inclosed in the brass box, by which the glass globe is supported. The rubber which is applied to the globe, is fixed to a spring, the position of which may be adjusted by means of the screw which is seen between the winch and the rubber. The rubber is a silk cushion stuffed with hair. The conductor is a brass tube with a round hollow ball at each end, which collects fire by means of a brass piece, resembling the tines of several forks, and fixed in that round knob which is placed nearest the globe. The barrel of the conductor is put into a short brass socket, which is placed in a horizontal position, which is joined to a perpendicular brass socket that is attached with cement to a glass tube that is fixed in a large round wooden foot. To use this apparatus, it is necessary to screw to a table the brass box which supports the globe and rubber, and to place on the same table the brass conductor, with the points of the brass piece presented to the glass globe. On the top of the horizontal brass socket, immediately over the perpendicular brass socket, is stuck a large plumy feather, the fibres of which will, when the winch is turned, repel each other, and expand in all directions, unless the electricity be discharged, in which case they will again shrink together. If a brass plate be suspended from the conductor, directly over another brass plate, which is placed about three inches below it, any light bodies which are placed on the latter plate will, when the winch is turned, move to and fro between the plates, dancing in a very amusing manner. To that knob of the prime conductor which is farthest from the glass globe, is attached Mr. Canton's electrometer, which consists of two pith balls, suspended by means of a linen thread from a wire, which repel each other in proportion to the degree of electricity communicated to the conductor.

ELE'CTRICITY, *s.* in phisiology, is that property of certain bodies, whereby, after being rubbed, excited, or heated in some particular degree, they acquire the power of attracting and repelling other remote bodies; and frequently of emitting sparks and streams of light.

To ELE'CTRIFY *v. a.* to communicate or endue with electric virtue.

ELECTRO'METER, *s.* in electricity, an instrument contrived for measuring the quantity, and determining the quality of electricity in any electrified body. The electrometer of Mr. Canton consisted of two balls of cork or pith of elder, about the size of a small pea suspended on fine linen threads, about six inches long.

ELECTROPHO'RUS, *s.* in electricity, an instrument or machine, invented by Volta, for exhibiting perpetual electricity.

ELE'CTUARY, *s.* [*electuarium*, Lat. perhaps from *leichō*, to lick, Gr.] a medical composition made to the consistence of a conserve.

ELEEMO'SYNARY, *a.* [from *eleemosyne*, alms, Gr.] living upon alms; given in charity.

E'LEGANCE, or E'LEGANCY, *s.* [*elēgantia*, from *eligo*, to choose out, Lat.] a symmetry of parts which rather soothes than pleases, and carries with it rather the idea of neatness than beauty.

E'LEGANT, *a.* [*elegantia*, from *eligo*, to choose out, Lat.] pleasing, or causing pleasure by meaner beauties; neat; nice. SYNON. *Genteel* implies something above the common run; *elegant* means beautiful without grandeur. By a house genteelly furnished is understood a house containing every thing necessary, good, and creditable; by *elegantly* furnished is meant *genteelly*, and in such a manner as to please without elevation.

E'LEGANTLY, *ad.* in such a manner as to please by neatness and exactness.

ELE'GIAC, *a.* [*elegeia*, perhaps from *e, e, legō*, to say alas, Gr.] used in elegies; mournful; sorrowful.

E'LEGY, *s.* [*elegeia*, perhaps from *e, e, legō*, to say alas, Gr.] a poem written on some mournful subject; a poem on any subject written in a simple plaintive style, without any points or turns; a funeral song.

E'LEMENT, *s.* [*elementum*, perhaps from the old word *elco*, to grow, Lat.] the first or constituent principle out of which any thing is resolved, and which will not admit of any further resolution. The four elements of the ancients are air, fire, water, and earth. The three former of these are, however, compound bodies, and therefore not properly entitled to the name of elements. On the contrary, about forty substances, which were either unknown to the ancients, or regarded as compounds, have been raised by modern chemists to the rank of simple or elementary substances. These are light, calorie, oxygen, the twenty-three metals; several of the earths, and the simple combustibles, hydrogen, sulphur, phosphorus, and carbon. Figuratively, the letters of any language; the lowest or first rudiments or grounds of any art or science.

To E'LEMENT. *v. a.* to compound of elements.

ELEME'NTAL, *a.* composed of, or produced by, some of the elements; arising from some first principle.

ELEMENTA'RITY, *s.* the simplicity of nature, or absence of composition; the state of being uncompounded.

ELEME'NTARY, *s.* uncompounded; simple; without mixture; having only one principle or element for its essence.

E'LEMI, *s.* a drug, improperly called gum *Elemi*, being a resin. The genuine *Elemi* is brought from Æthiopia. The American *Elemi*, almost the only kind known, proceeds from a tall tree.

ELE'NCH, *s.* [*elenchus*, Lat.] an argument; a sophism.

E'LEPHANT, *s.* [*elephas*, Lat.] the largest of all quadrupeds, of whose sagacity, faithfulness, prudence, and even understanding, many surprising relations are given. This animal feeds on hay, herbs, and all sorts of pulse. He is naturally gentle. He is supplied with a trunk, or long hollow cartilage, which serves him for hands. He is a native of India and Africa. His teeth are the ivory so well known in Europe. See the plate.

ELEPHA'NTA, or GALI POURI, a small island on the W. coast of Hindoostan, about five miles from Bombay, and inhabited by about 100 poor Indian families. It contains one of the most stupendous antiquities in the world. The figure of an elephant, of the natural size, cut coarsely in black stone, appears in an open plain, near the landing-place, from which an easy slope leads to a stupendous subterranean temple, hewn out of the solid rock, 80 or 90 feet long, and 40 broad. The roof, which is cut flat, is supported by regular rows of pillars, about 10 feet high, with capitals resembling round cushions, and at the farther end of it are three gigantic figures, mutilated by the absurd zeal of the Portuguese, when this island was in their possession. Mr. Grose judges this immense excavation to be a bolder

work than that of the pyramids of Egypt; and Major Rennel thinks this, and a subterranean temple in the adjacent isle of Salsette, to be monuments of a superstition anterior to that of the Hindoos. This island has been ceded to the English by the Mahrattas.

ELEPHANTI'ASIS, *s.* [Lat.] in medicine, a species of leprosy, so called from covering the skin with incrustations, like those on the hide of an elephant.

ELEPHA'NTINE, *a.* [*elephantinus*, from *elephas*, the elephant, Lat.] appertaining or belonging to an elephant; partaking of the qualities of an elephant; likewise a title given to certain books among the Romans, which contained an account of the actions of the emperors, and the laws made by the senate; supposed to be so called either from their vast size, or their being composed of ivory.

To E'LEVATE, *v. a.* [*elevo*, Lat.] to raise aloft, on high, or at a distance from the ground; to exalt or dignify; to raise the mind with great and sublime ideas; to elate.

E'LEVATED, *part.* or *a.* raised or situated on high.

ELEVA'TION, *s.* [*elevo*, to lift up, Lat.] the act of raising on high. Exaltation, applied to dignity or preferment. The raising the thoughts to contemplate lofty and sublime subjects. In astronomy and geography, the height of any object above the horizon. In architecture, a draught of the principal side or face of a building, called its *upright*. In perspective, a draught or representation of the whole body of a building. In gunnery, the angle which the chase of a piece of ordinance, or the axis of its hollow cylinder, makes with the plane of the horizon.

ELEVA'TOR, *s.* [Lat.] a raiser or lifter up.

ELE'VE, *s.* a term purely French, but naturalized in our language, and signifies a disciple or scholar bred up under any one.

ELE'VEN, *a.* [*ændlefen*, Sax.] one more than ten; twice five, and one added.

ELE'VENTH, *a.* [*ændlefta*, Sax.] an ordinal, expressing the next in order beyond the tenth.

ELF, *s.* [plural *elves*; for most nouns ending in *f* in the singular, change the *f* into *ves* in the plural; Brit.] a wandering spirit, frequenting solitary places; a fairy, an evil spirit or devil.

E'LFIN, *a.* relating to fairies; belonging to elves. "That *elfin* knight." *Spen.*

E'LFLOCK, *s.* knots of hair twisted by elves.

E'LGIN, the county-town of Elgin or Murrayshire, in Scotland. Here are many large old buildings, erected over piazzas, and the ruins of its old cathedral shew it to have been once a magnificent structure. It is situated near the river Lossie, five miles from the mouth of Murray Frith, and 30 N. N. E. of Inverness.

E'LGINSHIRE. See MURRAYSHIRE.

E'LHAM, a small town in Kent, situated on the lesser Stour, nearly between Wye and Hythe, 10 miles S. of Canterbury, and 67 E. S. E. of London. Market on Monday.

To ELI'CITE, *v. a.* [from *elicio*, to entice out, Lat.] to strike, find out, or discover by dint of labour and art.

ELI'CIT, *a.* [from *elicio*, to entice out, Lat.] brought from a state of bare possibility to that of real existence; brought into act; internally acted; exerted by the will.

To ELI'DE, *v. a.* [*elido*, from *laedo*, to strike or cut, *e* being here used to strengthen the signification, Lat.] to cut in pieces.

ELIGIBI'LITY, *s.* worthiness of being chosen.

E'LIGIBLE, *a.* [from *eligo*, to choose out, Lat.] fit to be chosen; worthy of choice; preferable; possessing all those qualities and excellencies, which are sufficient to set a thing above others, and recommend it.

E'LIGIBLENESS, *s.* worthiness to be chosen; preferableness.

ELIMINA'TION, *s.* [from *e*, out of, and *limen*, a boundry, Lat.] banishment; rejection.

ELIQUA'TION, *s.* in metallurgy, an operation whereby one substance is separated from another by fusion. It consists in giving the mass a degree of heat that will make the more fusible matter flow, and not the other.

ELI'SION, *s.* [from *elido*, to cut off, Lat.] in grammar, the cutting off a vowel or syllable in a word, as in "*th' attempt*," where *e* is cut off, because coming before a vowel. This is called synalæpha, frequently practised in English poetry, and always observed in latin verse. A division, cutting, dividing, attenuation, or a separation of parts.

ELIXA'TION, *s.* [from *elixo*, to boil, Lat.] in pharmacy the extracting the virtues of ingredients by boiling or stewing.

ELI'XIR, *s.* [Arab.] a medicine made by strong infusion, where the ingredients are almost dissolved in the menstruum, and give it a thicker consistence than a tincture; the extract or quintessence of any thing; any cordial or invigorating fluid or substance.

ELI'ZABETH, daughter of Henry VIII. and Anne Bolen, ascended the throne Nov. 17, 1558, being then 25 years old, pursuant to the order of succession settled by that king's will, authorised by act of parliament, and was crowned January 15, 1559. As there were many troubles then in foreign states, chiefly on account of religion, she assisted the protestants in Scotland, France, and the Low Countries, against their respective sovereigns, or the governing party, by whom they were cruelly oppressed and persecuted. The queen of Scots, and the dauphin her husband, had, by order of Henry II. of France, taken the arms of England, with the titles of sovereigns of that kingdom; this made Elizabeth look on Mary as a dangerous rival; whereupon she entered, 1560, into a treaty with the Scotch malecontents, in pursuance of which she sent an army into Scotland to break the measures of her enemies, which had the desired success. Some time after she assisted the Hugonots in France. By these means queen Elizabeth kept both France and Scotland so employed, that they could find no opportunity to put their schemes in execution of dethroning her. The pope was desirous of sending a nuncio to England, who was arrived in Flanders, and demanded permission to continue his journey to England, but could never obtain it; the queen saying she had nothing to do with the pope, who had no more authority than other bishops; and, as a security against the disturbance the pope might cause to be given from any quarter, she always kept a good fleet in readiness against any invasion, and secured more and more the affections of her subjects, which she looked upon as her only support. The queen of Scots, being defeated in 1568 by the forces raised by the malecontents in that kingdom, was obliged to fly into England, where the queen kept her prisoner many years. The persecution of the protestants in the Low Countries occasioning several Flemish families to fly for refuge to England, the queen settled them at Norwich, Colchester, Sandwich, and several other places, which turned greatly to the advantage of the nation, they being the first who brought hither the art of making bays and seys, and other linen and woollen cloths of the like sort. A rebellion broke out in the north, under the earl of Westmoreland and Northumberland, and Dacres, a northern gentleman, who intended to have set Mary Queen of Scots on the throne, and to have restored the popish religion. This rebellion queen Elizabeth suppressed and the earl of Northumberland was beheaded; as was also the duke of Norfolk in 1572, who had been released out of the Tower, and engaged again in a conspiracy against the queen. The year 1571 passed chiefly in a negociation for a marriage between queen Elizabeth and the duke of Anjou, second son to Catharine de Medicis, and brother to Charles IX. of France. Both Charles and Elizabeth found their account in this negociation, though neither of them intended it should take effect. Charles's design was to amuse the protestants, particularly the Hugonots, with whom he had made a perfidious peace, till he had drawn them into the snare, in order to destroy them by treachery, when he found it difficult to do it by open force. Queen Elizabeth entered into the negociation of the match to please her ministers, who were continually pressing her to marry, in order to cut

off all hopes from the queen of Scots, and to dishearten her enemies. However, a defensive alliance was concluded between the two crowns. Charles died, and was succeeded by the duke of Anjou, by the name of Henry III. with whom queen Elizabeth renewed the league between the two crowns, but under-hand supplied the prince of Condé with money for the Hugonots; so that she might justly be called the support of the protestant religion both abroad and at home, having in the beginning of her reign removed all the zealous catholics from the councils, and from all posts of authority, put protestants in their room, and published a proclamation allowing divine service to be performed, and the holy scriptures to be read, in the vulgar tongue. Some time after another negociation was carried on for a marriage between her and the duke of Alencon, now the duke of Anjou, Henry's brother, even to the signing of the marriage articles, and the duke came over in person; but it was all broke off on a sudden. One Stubbs had his right hand cut off on a scaffold for writing against the marriage; when he pulled off his hat with his left, and cried, God save the queen! In 1577 she assisted the people of the Low Countries, who were grievously oppressed by the duke of Alva, the king of Spain's general, and who was endeavouring to extirpate the protestants; she lent them 100,000*l.* sterling to enable them to carry on the war. Some years after she sent a good body of forces under the earl of Leicester; but he, not being agreeable to the States, was recalled, and lord Willoughby was appointed general of the English forces in his room. This war at last concluded in the total revolt of seven of these provinces from the dominion of Spain, which since made the most considerable republic in the world. The pope excommunicated the queen; and the king of Spain and the duke of Guise were in a league with the pope to invade England, dethrone Elizabeth, and set up the queen of Scots in her room. In the mean time, several plots were set on foot by the popish emissaries to take away her life; for which several priests, Jesuits, and others, were executed. A general association was also formed in England to prosecute to death such as should attempt any thing against her person or government. The parliament approved and confirmed this association, and passed a severe act against popish priests and Jesuits, whereby they were required to depart the kingdom, and, if any returned, they were to be guilty of high-treason, and those who harboured them, of felony. A little after the queen made an alliance with the king of Scotland for their mutual defence, and the security of the protestant religion. In 1585, she sent sir Francis Drake to America, who took several places in the Spanish West Indies. This year died the learned and ingenious sir Philip Sidney, of a wound he received in a battle in the Low Countries. In 1586, Babington's conspiracy, in which were engaged several popish priests from the seminaries abroad, was discovered; and they were, to the number of 14, arraigned, condemned, and executed. It was laid for an invasion, to kill the queen, free the queen of Scots, and set her on the throne. As the queen of Scots appeared by letters and otherwise to have a hand in this conspiracy, it was resolved now to prosecute her on an act of parliament made the preceding year, whereby the person for whom, or by whom, any thing should be attempted against the queen, was liable to death. Commissioners were accordingly sent to try her at Fotheringham castle in Northamptonshire, where she was then in custody, who in the end passed sentence upon her on the 25th of Oct. Four days after it was approved and confirmed by parliament. On December 6th, it was proclaimed in London, and then throughout the kingdom; and on February following the sentence was executed upon her in the hall of the said castle, by severing her head from her body, which she suffered with great calmness and resignation. Queen Elizabeth endeavoured by all methods to prevent the odium of this action falling upon her, fining secretary Davyson, with whom the warrant was lodged, 10,000*l.* (and he was also imprisoned during her pleasure,) and ordering her privy-counsellors to be examined in the Star-chamber. In 1588, the king of Spain, encouraged by pope Sextus V. sent a great fleet, to which they had given the title of the Invincible Armada, to invade England. It consisted of 130 great ships, 20 caravels, and 10 slaves, having above 20,000 soldiers on board, with seamen, ammunition, and provision, in proportion; to oppose which, 20,000 men were dispersed along the southern coasts, an army of 22,000 foot and 1000 horse was encamped at Tilbury, where the queen reviewed them, and made a very engaging speech to them; there was another army of 34,000 foot and 2000 horse to guard the queen's person. Her subjects shewed the utmost readiness to stand in her defence; and she fitted out a considerable fleet, under the command of lord Howard as admiral; Drake, Hawkins, and Forbisher, vice-admirals; and sent Seymour with 40 English and Dutch ships to the coast of Flanders, to hinder the prince of Parma from joining the Spanish fleet. On the 19th of July, the Spanish fleet, commanded by the duke of Medina Celi, entered the Channel, when the English fleet kept close to them, and soon took some of their ships. On July 24th, there was a brisk engagement. On the 27th, the Spanish fleet came to an anchor off Calais, expecting in vain the prince of Parma to put to sea with his army, and make a descent on England, as it had been agreed. The English fleet, now consisting of 140 ships, several of which were fitted out by private persons, followed them; and the English admiral in the night sent 8 fire-ships among them, which so terrified them that they cut their cables, and put to sea in the utmost confusion: the English admiral took the Galleas, and the commander of it was slain. In short, the whole fleet was dispersed, and the Spaniards resolved to make the best of their way home. Of this prodigious armament, only 60 ships returned home, and those in a shattered condition. Queen Elizabeth went in state to St. Paul's to return Almighty God thanks for this great victory. In 1590, sir Francis Walsingham, secretary of state, departed this life: he died so poor, that he was buried privately, to save expences. Sir Robert Cecil, son to the lord-treasurer Burleigh, succeeded him as secretary of state. In 1594, Roderigo Lopez, a Jew, who was the queen's physician, two Portuguese, and Patrick Cullen, an Irishman, were bribed by the Spanish governors of the Netherlands to take her away by poison, or otherwise; but the plot being discovered, the conspirators were seized and executed: as were Edmund York and Richard Williams, the next year, for undertaking to commit the same crime, on the promise of 40,000 crowns from the said Spanish governors. In 1596, the queen sent a fleet and army under Howard, the earl of Essex, and Raleigh, to the coast of Spain, which plundered Cadiz, and burnt the merchant ships at Port Real, and took and destroyed 13 Spanish men of war, and did them other considerable damage. In 1598, Henry IV. of France, having made a separate peace with the king of Spain, queen Elizabeth and the States entered into a new treaty to carry on the war against that monarch by themselves. Lord Burleigh died this year, as did Spenser the poet. On February 25, 1601, Robert Devereux, earl of Essex, was beheaded. Towards the end of the year, complaints having been brought before the commons of certain monopolies authorized by her letters patent, as soon as she understood that the parliament deemed them so many infringements of the people's privileges, without staying to be addressed, she annulled most of them, and left the rest to the laws, upon which the commons waited upon her with an address of thanks. This year the earl of Tyrone, who had raised a rebellion in Ireland, was defeated, and obliged to cast himself upon the queen's mercy. In the beginning of the year 1603, queen Elizabeth falling sick, and her illness increasing every day; when she was near her end, the council sent some of their body to desire her to name her successor; when she named the king of Scots. She died the 24th of March, in the 70th year of her age, after a glorious reign of 44 years, 4 months, and 8 days. She was buried in Westminster-abbey. Elizabeth in her person was masculine, tall, straight, and strong limbed, with an high round fore-

head, brown eyes, fair complexion, fine white teeth, and yellow hair. She danced with great agility; her voice was strong and shrill; she understood music, and played upon several instruments. She possessed an excellent memory, understood the dead and living languages, had made good proficiency in the sciences, and was well read in history. Her conversation was sprightly and agreeable, her judgment solid, her apprehension acute, her application indefatigable, and her courage invincible. She was the great bulwark of the protestant religion; she was highly commendable for her general regard to the impartial administration of justice, and even for her rigid economy, which saved the public money, and evinced that love for her people which she so warmly professed; yet she deviated from justice in some instances, when her interests or passions were concerned; and, notwithstanding all her great qualities, we cannot deny that she was vain, proud, imperious, and in some cases cruel. Her predominant passions were jealousy and avarice; though she was also subject to such violent gusts of anger, as overwhelmed all regard to the dignity of her station, and even hurried her beyond the bounds of common decency. She was wise and steady in her principles of government; and, above all princes, fortunate in a ministry. She established the protestant religion in her dominions, notwithstanding all the endeavours used to prevent it; and caused trade and commerce, which always met with her protection, to flourish. The Royal Exchange was built in her time, by Sir Thomas Gresham; and the present method of maintaining the poor, and choosing overseers in every parish, was established in this reign.

ELK, *s.* [*ælc*, Sax.] an animal of the deer kind, with the horns palmated, and without a stem. It is a native of the northern parts of Europe; and is a large and strong animal, being equal in size to a horse, but much less beautiful.

ELL, *s.* [*eln*, Sax.] a measure of length varying in different countries; but those mostly used in England are the English and Flemish ells; the former of which is 3 feet 9 inches, or one yard and a quarter; the latter only 27 inches, or three quarters of a yard; in France, one yard and a half; and in Scotland, 37 two-tenths English inches.

ELLESDON, a small town of Northumberland, 28 miles N. W. of Newcastle. Market neglected.

ELLESMERE, a town of Shropshire, situated on a large mere, famous for fish, in a small but fertile district of the same name, 16 miles N. N. W. of Shrewsbury, and 176 N. W. of London. Market on Tuesday.

ELLIPSIS, or ELLEIPSIS, *s.* [from *elleipsis*, deficiency, Gr.] in grammar, or rhetorie, a figure by which something left out in a sentence is to be supplied by the reader or hearer. In geometry, a regular continued curve line, including a space which is longer than broad, vulgarly called oval.

ELLIPTIC, or ELLIPTICAL, *a.* [from *elleipsis*, deficiency, Gr.] having the form of an ellipsis; of an oval form.

ELM, *s.* [*elm*, Sax.] a timber very serviceable in places where it may lie continually dry, or wet, in extremes.

ELOCUTION, *s.* [*elocutio*, from *eloquor*, to speak out, Lat.] the power of expressing one's ideas with fluency of speech; eloquence; the power of expression or diction; the choosing and adapting words and sentences to the things or sentiments to be expressed.

ELOGY, *s.* [*eloge*, Fr.] praise or panegyric bestowed on a person on account of his merit.

ELOHI, ELOI, or ELOHIM, [has been derived from *ul*, strength, and from *alah*, to swear, Heb.] one of the names of God in scripture; but sometimes applied to princes, angels, and even false gods, and then used in the plural.

To ELONGATE, *v. a.* [from *longus*, long, Lat.] to strength; to lengthen or draw out, applied to the surface or dimensions of a thing. Neuterly, to go farther off from a thing or place.

ELONGATION, *s.* the act of stretching or lengthening; the state of a thing stretched. In astronomy, the digression or recess of a planet from the sun, with respect to an eye placed on the earth. Also distance; departure; removal.

To ELOPE, *v. a.* [from *loopen*, Belg.] to run away; to break loose; to escape from law or restraint. In law, to quit or leave a husband.

ELOPEMENT, *s.* departure, or withdrawing from just restraint, or lawful power. In law, the voluntary departure of a wife from a husband.

ELOPS, *s.* [Gr.] a fish; reckoned however by Milton among the serpents.

ELOQUENCE, *s.* [from *eloquor*, to speak out, Lat.] the art of speaking with elegance, so as to move the affections; the power of speaking with fluency; a figured and elegant style or diction, adapted to warm the imagination and move the passions.

ELOQUENT, *a.* [from *eloquor*, to speak out, Lat.] having the power of speaking with elegance, fluency, and in such a manner as to move the passions.

ELSE, *pron.* [*elles*, Sax.] other; one besides that which is mentioned.

ELSE, *ad.* otherwise; excepting the person or place mentioned.

ELSEWHERE, *ad.* in some other place; in any other place.

ELSINORE, a sea-port town of Denmark, seated on the Sound, in the island of Zealand. Many foreign merchants, and the consuls of the principal nations which trade to the Baltic, reside here. Vessels passing through the Sound pay a toll to the king of Denmark, which, with those of the two Belts, supply an annual revenue of above 100,000*l*; and in return, he takes the charge of constructing lighthouses, and erecting signals, to mark the shoals and rocks, from the Cattegat to the entrance into the Baltic. Lat. 56. 2. N. lon. 12. 37. E.

ELTHAM, a town of Kent, having a market on Monday, 9 miles S. of London. Here king Edward I. built a palace, very little of which now remains.

ELVAS, a city of Alantejo, containing, besides the cathedral, 3 parish churches, 2 hospitals, and 7 convents, with an academy founded in 1733. Here is a cistern so large, that it will hold water enough to supply the town for six months. It is brought by an aqueduct three miles in length. Elvas is seated near the river Guadiana, 47 miles N. E. of Evora, and 104 E. of Lisbon.

To ELUCIDATE, *v. a.* [*elucido*, from *lux*, light, Lat.] to cast light upon a difficult or intricate subject; to clear; to make clear.

ELUCIDATION, *s.* the act of rendering difficult subjects plain; an explanation.

ELUCIDATOR, *s.* a person who explains difficulties; a commentator.

To ELUDE, *v. a.* [*eludo*, from *ludo*, to play, Lat.] to escape by stratagem; to avoid any mischief or danger by artifice; to mock or disappoint the expectation by any unforeseen escape.

ELUDIBLE, *a.* possible to escape by artifice; possible to be defeated or disappointed.

ELVELOCK, *s.* knots in the hair superstitiously supposed to be tangled by the fairies.

ELUSION, *s.* [from *eludo*, to elude, Lat.] an artifice which is concealed from the knowledge of another; a fraud.

ELUSIVE, *a.* using artifice to escape or avoid.

ELUSORY, *a.* fraudulent.

To ELUTE, *v. a.* [*eluo*, from *e*, of, and *lavo*, to wash, Lat.] to wash off.

To ELUTRIATE, *v. a.* [*elutrio*, from *eluo*, to wash off, Lat.] to strain off.

ELUTRIATION, *s.* in chemistry, the operation of pulverizing metallic ores or other substances, and then mixing them with water, so that the higher parts which are capable of suspension may be poured off, and thus separated from the grosser particles. Most of the metallic substances which are reduced to an impalpable powder are prepared by this process.

E'LY, an ancient city of Cambridgeshire, neither populous (the inhabitants being about 2500) nor beautiful, and chiefly noted for its minster, or cathedral, which has a stately lantern, seen at a vast distance, but which seems to totter with every blast of wind. It has but one good street, well paved, the rest being unpaved, and miserably dirty. The bishops have all the rights of Counts Palatine, which also they had through the whole Isle of Ely, till the reign of Henry VIII. Ely is completely subordinate to the bishop in its civil government, and is the only city in England unrepresented in parliament. It is seated on a rising ground, near the river Ouse, and other streams, the former of which is navigable to Lynn, and by which it carries on a pretty good trade, in a soil particularly famous for producing large quantities of strawberries, greens, and other garden stuff; 16 miles N. of Cambridge, and 68 N. of London. Market on Saturday.

ELY'SIAN, (*elyzian*) *a.* [from *elysium*, the pagan heaven, Lat.] pertaining to elysium; pleasant; deliciously; soothing; exceedingly delightful.

ELY'SIUM, (*ely'sium*) *s.* [Lat.] in the ancient mythology, a place in the lower world, furnished with pleasant fields, and supposed to be the receptacle for the happy souls of the departed.

To EMA'CIATE, (*emáshiate*) *v. a.* [*emacio*, from *maceo*, to be lean, Lat.] to make a thing waste, or grow lean. Neuterly, to grow lean; to waste away.

EMACIA'TION, *s.* [*emacio*, from *maceo*, to be lean, Lat.] the act of making lean; the state of a person growing lean, wasted away, or in a consumption.

EMACULA'TION, *s.* [*emaculo*, from *macula*, a spot, Lat.] the act of freeing any thing from spots or foulness.

E'MANANT, *a.* [from *e*, from, and *mano*, to flow, Lat.] issuing or flowing from something else.

To E'MANATE, *v. n.* [from *e*, from, and *mano*, to flow, Lat.] to issue or flow from something else.

ENGLAND, [pronounced *Ingland*; so called from the Angles, who settled in these parts in the year 449, and were situated on the continent between the Saxons and Jutes] the southern, and most considerable part of the island of Great Britain, is bounded on the N. by Scotland; on the E. and N. E. by the German Ocean; on the S. by the English Channel; and on the W. by the principality of Wales, and the Irish Channel. It lies between 2 degrees E. and 6 W. longitude, and between 49 and 56 N. latitude. It is of a triangular form. From the Land's End in Cornwall to Berwick upon Tweed, it is about 425 miles; from Berwick to the S. Foreland in Kent, its length is about 345 miles; and thence to the Land's End, its greatest breadth, is 350. The country exhibits a variety of prospects, varying from the extensive plain, and gently-rising uplands, with the intervening vales, and gently flowing rivers, to the lofty mountains, craggy hills, deep dells, and tumbling torrents. Though in some parts there are large barren moors, and wide uncultivated heaths, on the whole, few countries have a larger proportion of land capable of culture, and there is none where agriculture is better attended to, or, indeed, where it is more necessary for the subsistence of the inhabitants. All the valuable productions, both animal and vegetable, of this country, have been imported at different periods from the continent; and have been kept up and improved by constant attention. Overrun with woods, like the wilds of America, nuts, acorns, crabs, and a few wild berries, formed the only vegetable food which this country formerly afforded. The bear, the wolf, and the wild boar, now totally extirpated, roamed at large in the forests, large herds of stags ranged through the woods, roebucks bounded over the hills, and wild bulls ranged in the marshy pastures. By degrees, the woods were destroyed, in order to make way for cultivation, the marshes were drained, and the wild animals, invaded in their retreats, gradually disappeared, and their places were supplied by the domestic kinds. England now possesses no other wild quadrupeds than some of the smaller kinds, such as the fox, the wild cat, the badger, the martin, and others of the weasel kind; the otter, the hedge-hog, the hare, and rabbit; the squirrel, dormouse, mole, and several species of the rat and mouse. There are dogs of every kind, except wolf-dogs, which, since the wolves were destroyed in England, have been generally neglected; however, the race of these animals is still maintained in Ireland. But there is one sort that is not to be equalled in any part of the world, which is the bull-dog; for these will not only attack the fiercest bull, but any kind of wild beast; nor can any thing, when they have once fastened upon the animal, oblige them to let go their hold. But what is more strange, when any of them are transported beyond sea, they lose their courage; and the same is said of English cocks. It must however be confessed, that the use which is made of the courage of these creatures, (especially the latter,) by men too from whose rank and talents better things might be expected, deservedly fix a stigma on the national character. On the other hand, the various kinds of domestic animals, imported from abroad have been reared to the greatest perfection; and the improvements in the vegetable products of this island have been no less considerable. It must be acknowledged there are no vines that are so fit to produce good wine as in warmer countries; but then there are variety enough which yield good grapes, that are made use of as other fruits. However, there are great quantities of cyder, perry, mead, and several kinds of made wines; but the principal drink of the generality is beer, or ale. The rigours of winter, as well as the parching heats of summer, are felt here in a much less degree than in parallel climates on the continent, as the breezes from the sea temper the severities of the opposite seasons; but the changes of weather are generally more frequent and sudden, while few countries are clothed with so beautiful and lasting a verdure. Its situation, however, so far north, is less favourable to the ripening than to the growth of vegetable productions. The winters indeed are sometimes rainy and foggy, and the weather is subject to great variations, which, however, does not much impair the health of the inhabitants who are accustomed thereto; for they generally live as long as in any other countries, and we have frequent instances of people who have lived to a very great age: particularly Henry Jenkins, a Yorkshireman, who was 168 years old when he died; and Thomas Parr, of Shropshire, who was 152, and might have lived longer, if he had not been sent for up to court as a curiosity. The harvests, especially in the northern parts, often suffer from the rains, and the fruits fall short of perfect maturity. The richest parts of the land are, in general, the middle and southern; extensive tracts in the northern parts are rather sterile, and on the eastern coast, in many parts, the ground is sandy and marshy. In the north the country is mountainous, and Cornwall and the adjacent countries contain many rough hilly tracts; but in these parts, a variety of rich and valuable minerals and metals are found. Considered as a *corn country*, the east coast, from its superior dryness, is favourable to the growth of grain; and the west coast, from the wetness of the climate, is better calculated for pasterage. The most considerable rivers are the Thames, Severn, Medway, Trent, Ouse, Tyne, Tees, Wear, Mersey, Dee, Avon, Eden, Derwent, &c. The lakes are chiefly in the N. W. counties; and those of Westmoreland and Cumberland, in particular, exhibit varieties of romantic, picturesque, and grand scenery. The river-fish, from the populousness of the country, and the number of fishers, are, in many parts, much dimi-

nished; but the sea is an inexhaustible source of wealth, and the coasts are enlivened by numerous inhabitants, who gain their chief subsistence from the deep. The manufactures and commerce of this country are prodigious, and absorb almost the whole attention of many classes of the people. The government is a mixture of monarchy, aristocracy, and democracy; the legislative power residing in the king, the house of lords, and the house of commons, but the executive power is vested solely in the king, who appoints the great officers of state, the judges, and many even of the inferior gradations of magistracy. The national church establishment is episcopal; the 39 articles are interpreted by the clergy, in general, according to the principles of Arminius, although the 17th article strongly savours of the Calvinistic creed. The dissenters are numerous, and of different descriptions, but most of the rigorous penal laws, which were long in force against them, have been repealed.

ENGLAND, NEW, a country of North America, bounded on the W. by New York; on the N. by Canada; on the E. by Nova Scotia and the Atlantic Ocean; and on the S. by the same ocean and Long Island Sound. It is in many parts hilly; but the country is, notwithstanding, fertile, well cultivated, and populous. It was first settled by the Puritans, who were driven from England, at different times, by persecution. The principal productions are wheat, Indian corn, rye, oats, flax, hemp, and garden vegetables. The exports are fish, timber, horses, mules, pot-ash, pearl-ash, salted beef, &c. The colleges here are in a flourishing state. It contains five states, namely, New Hampshire, Massachusets, Rhode Island, Connecticut, and Vermont. The Connecticut, Merrimack, Penobscot, and Piscataway, are the principal rivers.

ENO'RMOUSNESS, *s.* excess of guilt or wickedness.

ENO'UGH, (*enúff*) *a.* [*genoh*, Sax.] sufficient; that will answer any purpose, wish, or design. It should be observed, that though other adjectives are placed in English before their substantives, yet this always follows it. SYNON. The object of the words *sufficient* and *enough* is quantity; but with this difference, that *enough* relates more to the quantity one desires to have, and *sufficient* to that quantity one really wants to employ. Thus the avaricious man never has *enough*; let him accumulate ever so much, he still desires more; and the prodigal never has *sufficient*, he is still wanting to expend more than he has.

ENO'UGH, (*enúff*) *s.* that which is sufficient to answer a person's expectations or wishes; a quantity answerable to any design, or proportionable to a person's qualities and abilities.

ENO'UGH, (*enúff*) *ad.* in such a manner as to give content or satisfaction. When used for an adjective, it denotes a diminution, or that a thing is not perfectly so, and is used to express great indifference or slight. "The song was *well enough*;" *i. e.* not so well as it ought to be, or as it might be expected. When repeated, it is used as an interjection, implying that there is already more than a sufficiency, and that a person is desired to desist. "Henceforth I'll bear affliction, till it do cry itself—*enough, enough!*"

ENO'W, (*enów*) *a.* [the plural of *enough*, according to Johnson] a sufficient number. In this number it is used before its substantive; but in the singular after it.

EPHESUS, anciently a celebrated city of Ionia, in Asia Minor, and the capital of the Roman dominions in Asia. Here was the famous temple of Diana, which the ancient Christians afterwards converted into a place of public worship; but it is now so entirely ruined, that it is difficult to find the ground plot; however, there are some ruins of the walls, and five or six marble columns, all of a piece, 40 feet in length, and 7 in diameter. It is now called Ajasaloue, and has still some magnificent and curious remains of its former splendour. The fortress seems to be the work of the Greek emperors. The only inhabitants are a few Greek families, who have reared huts among the ruins, to shelter themselves from the weather, and who are so illiterate, as to be unable to read, in its original language, the epistle of Paul to their ancestors the Ephesians. It is seated at the mouth of the Castrus, and has still a good harbour, 40 miles nearly S. of Smyrna. Lat. 37. 52. N. lon. 27. 42. E.

EPHOD, (*éfod*) *s.* [Heb.] an ornament, or kind of girdle, worn by the Jewish priests, when they attended at the temple; it was brought from behind the neck over the two shoulders; and then hanging down before, was crossed over the stomach, and thence carried round the waist twice, like a girdle, having its two ends brought before, which hung down to the ground. That of the high priest is embroidered with blue, purple, crimson, twisted cotton, and gold. Upon that part which came over the two shoulders were two large precious stones, on each of which were engraven the names of six tribes; where it crossed the priest's breast was a square ornament, called the breast-plate, set with twelve precious stones, on each of which was engraven the name of a different tribe. That of the other priests consisted of linen only.

To ETCH, *v. a.* [*etzen*, Teut.] a way used in making of prints, by drawing with a proper needle upon a copper-plate, covered over with a ground of wax, &c. and well blacked with the smoke of a link, in order to take off the figure of the drawing or print; which having its back side tinctured with white lead, will, by running over the strucken outlines with a stift, impress the exact figure on the black or red ground; which figure is afterwards with needles drawn deeper quite through the ground, and all the shadows and hatchings put in; and then a wax border being made all round the plate, there is poured on a sufficient quantity of well tempered *aqua fortis*, which insinuating into the strokes made by the needles, usually eats, in about half an hour, into the figure of the print or drawing on the copper-plate.

ETCH, *s.* in husbandry, a first crop, or a crop taken off ground which is fallow.

ETERNAL, *a.* [*æternus*, *i. e. æviternus*, from *ævum*, an age, Lat.] applied to the existence of the Deity, without beginning or end; endless; immortal. Figuratively, perpetual; constant; without intermission. That has been and always will be unchangeably the same.

ETERNAL, *s.* [*eternel*, Fr.] one of the appellations of God, implying his necessary existence, or his existence before all time.

ETERNALIST, *s.* [from *æternus*, eternal, Lat.] one who holds that the world was never created, but existed from eternity.

To ETERNALIZE, *v. a.* to make eternal, immortal, or to exist without end.

ETERNALLY, *ad.* without beginning or end; without change; from eternity to eternity; perpetually; constantly; or without intermission.

ETERNITY, *s.* [*æternitas*, from *æternus*, eternal, Lat.] duration without beginning or end.

To ETERNIZE, *v. a.* [*eterniser*, Fr.] to render perpetual or endless; to render immortal; to immortalize.

ETHELBALD had reigned two years as king of Wessex during his father's life, continued to possess that throne after his decease, and reigned but about two years and a half after his father's death; no remarkable event happened in his reign. He is handed down to us as a luxurious, debauched prince. He died in 860.

ETHELBERT, already in possession of the kingdom of Kent, succeeded to the whole monarchy, according to Ethelwulph's will. His reign of about six years is remarkable for nothing but the incursions of the Danes. He died in 866; and was buried at Sherborn.

ETHELRED I. succeeded Ethelbert in the kingdom of Kent, 866. In this reign the Danes became masters of Northumberland and East-Anglia, and resolved to push their conquests further, hoping in the end to subdue all England. With this view, Ivar, king of Denmark, turned his arms against Wessex, and resolved to attack Ethelred; he landed his troops in that county, and advanced as far as Reading. Ethelred marched that way with his army; a war hereupon ensued, and Ethelred, within the space of one year, fought nine pitched battles with the Danes, in some of which he

was victorious, in others not, but in all gave signal proofs of his courage and conduct; but unhappily in the last, which was fought near Wittingham, he received a mortal wound, of which he died, in 872, in the 6th year of his reign. Ethelred has the character of a good prince.

ETHELRED II. succeeded Edward the Younger in 979; he was then about 12 years of age. In 981 the piratical Danes landed at Southampton; and, in short, for ten years together, with now and then a little intermission, there was nothing to be seen but plunderings, conflagrations, murders, and all the miseries imaginable. During this time the credit of the monks went down apace; the people began to wonder, that they, who could do so many miracles (as they pretended) on their own account, could not, by their merits and prayers, prevent the calamities of the nation. Ethelred shewed them no manner of respect. In 990, Dunstan, archbishop of Canterbury, died. The Danes continually ravaged the kingdom, and Ethelred always bought them off when his forces had been defeated. The last money he paid them was 30,000*l.* which was levied by way of a tax called Danegeld, and was the first land-tax in England. Upon this the Danes ceased their ravages, and most of them returned home; but as a great many of them, liking the country, staid behind, and England was well stocked with them before, they began now to take upon themselves to domineer over the English, who were perpetually in dread of new invasions. They lived in ease and pleasure, while the English were forced to labour and toil to satisfy their demands. Hence they gave them the name of Lord Danes; and to this day, in some parts of England, a rich, idle, imperious man is called in derision a Lurdane. Ethelred, having married Emma, sister to the duke of Normandy, and depending on his assistance when required, resolved on a general massacre of the Danes. He privately sent orders to all parts of the kingdom for this purpose, which were executed with such fury, that in one day, viz. Nov. 13, 1002, all the Danes were slain; though some think, that by all the Danes are meant only those lately settled in England, and dispersed in Wessex and Mercia. King Sweyn's sister, who was a Christian, and married to a noble Dane, who had been settled some time in England, fell among the rest. Ethelred was so cruel as to have her beheaded, after he had ordered her children to be killed before her face. Sweyn, king of Denmark, no sooner heard of this bloody tragedy, and the cruel murder of his sister, but he swore he would never rest till he had revenged so monstrous an outrage. He therefore equipped a fleet of 300 sail, and came not for plunder as before, but to destroy the country with fire and sword. He landed in Cornwall with a powerful army, marched to Exeter, and having put the inhabitants to the sword, reduced it to ashes. Ethelred, who was betrayed on all hands, imprudently trusted the command of the army to the duke of Mercia, whom he had formerly banished, and whose son's eyes he had ordered to be put out; and he, in revenge, betrayed it to the Danes, as soon as he came in sight of them. The following spring Sweyn landed, and burnt Norwich and Thetford: soon after he engaged Ulfkettle, duke of East-Anglia, the bravest of all Ethelred's subjects, and entirely defeated him. In 1005 there was a famine in England, which obliged the Danes to return home for want of subsistence; but they returned again. In short, the Danes, in 1013, made themselves masters of the whole kingdom, and Ethelred returned into Normandy with his whole family. Sweyn being now proclaimed king of England without any opposition, he laid a most heavy tax on the nation, for paying the Danish troops. He died suddenly in 1014. Upon Sweyn's death, the Danes proclaimed his son Canute king of England; but the English recalled Ethelred, and flocked to him from all parts, so that he soon found himself at the head of a numerous army. Canute on a sudden embarked his troops, to assert his right to that crown. In the mean time Ethelred governed as bad as ever. Canute having settled affairs in Denmark, returned in about a year, and landed with a numerous army at Sandwich. Edmund, the king's eldest son, and his brother-in-law Edric, commanded the army against him; but Edric, in a little time, openly declared for Canute, and carried off with him a considerable body of troops, and 40 ships; after which Canute became master of several counties in Wessex, and Edmund marched into the north to join Uthred, earl of Northumberland. Canute followed him; and upon his coming, Uthred submitted to him; but Canute, thinking him not to be trusted who changed sides by compulsion, caused him to be put to death. Ethelred died in 1016, in the 50th year of his age, after a most inglorious reign of 37 years.

ETHELSTAN, or ATHELSTAN, succeeded Edward the Elder, being his natural son, in 925; but the illegitimacy of his birth was not then deemed a sufficient obstacle to his inheriting the crown. However, Alfred, a nobleman of his kindred, is said to have entered into a conspiracy against him, in favour of the legitimate sons of the deceased king, who were yet too young to be capable of governing themselves, which he effectually crushed. This monarch received also some disturbance from the Northumbrian Danes, whom he compelled to surrender; and resenting the conduct of Constantine, king of Scotland, who had given them assistance, he ravaged that country with impunity, till at length he was appeased by the humble submissions of that monarch. These submissions, however, being extorted, were insincere. Soon after Ethelstan had evacuated that kingdom, Constantine entered into a confederacy with a body of Danish pirates and some Welsh princes, who were jealous of Ethelstan's growing greatness. A bloody battle was fought near Brunsburg, in Northumberland, in which the English monarch was again victorious. After this success Ethelstan enjoyed his crown in tranquillity, and he is regarded as one of the ablest and most active of the Saxon kings. During his reign the Bible was translated into the Saxon language; and some alliances also were formed by him with the princes on the continent. In his reign he enacted a law, that a merchant who had made three long voyages, on his own account, should be admitted to the rank of thane, or gentleman. He died at Gloucester, in 941, after a reign of sixteen years, and was succeeded by his brother Edmund.

ETHELWULPH, Egbert's only surviving son, succeeded his father in 838. In 840 a body of Danes landed on the coast of Wessex. Ethelwulph, notwithstanding he was averse to fighting, marched against them in person, but had the misfortune to be beaten. About this time the nation of the Picts, so formidable heretofore to the southern Britons, were entirely extirpated by their neighbours the Scots, after a long war between them. Ethelwulph, wearied with the repeated incursions of the Danes, delivered up to Ethelstan, his natural son, Kent, Essex, and Sussex, with the title of king of Kent, contenting himself with the kingdom of Wessex, and the sovereignty of all England. In 852 the Danes came up the Thames, with a fleet of 300 ships, and pillaged London and other places; but Ethelwulph and Ethelstan engaged them near Oakley, in Surry, in which the English gained the day, and made such a terrible slaughter of the Danes, that but few escaped. The victory of Oakley having delivered him from the fear of the Danes, he now had an opportunity of indulging his natural bent to devotion; and by the advice of Swithin, bishop of Winchester, who had always a great ascendancy over him, he is said to have granted to the church the tithes of all his dominions. In 855 he paid a visit to the pope in person, to receive his benediction, and extended the tax of Peter-pence all over his dominions, till then levied only in Wessex and Mercia. Having staid a year at Rome, he returned home through France, where he married Judith, daughter of Charles the Bald, not above 12 years old. Whilst Ethelwulph was at Rome, Ethelbald entered into a conspiracy to dethrone his father, and to seize the kingdom; and made so great a party, that Ethelwulph was obliged to give up to him the kingdom of Wessex, and to rest contented with that of Kent for himself. Ethelwulph lived but about two years after this. He died in 857, after a reign of 20 years, and was buried at Winchester. He left

by will his dominions to his second son Ethelbert, after him to his third son Ethelred, and then to Alfred his youngest, who all in their turn succeeded to the crown.

ETHER, *s.* [*æther*, Lat.] a thin, subtile matter or medium, much finer and rarer than air, which commences from the limits of our atmosphere, and possesses the whole heavenly space. Ethers are also volatile liquids formed by the distillation of some of the acids with alcohol.

EUPHRASY, (*eufrasy*) *s.* [*euphrasia*, Lat.] eyebright, an herb which grows upon heaths, and is taken in various forms for dimness of sight.

EUPHRATES, one of the most celebrated rivers in the world, and the principal of Asiatic Turkey. It has one source about a day's journey, and another two days' journey, from Erzerum. The plain of Erzerum is inclosed between these two fine streams, which, when united, form what is called the Euphrates, or the Frat. After their junction, about three days' journey from Erzerum, the united stream begins to be navigable for boats, but the channel is so rocky, that the navigation is not safe. In its course it separates Aladulia and Syria, from Diabeker, and Diabeker from Arabia, after which it runs through the Irac-Arabia, till it receives the Tigris, and falls into the Persian Gulph about 50 miles below Bussorah.

EVREUX, a town, or city, capital of the dept. of Eure. Here is a manufactory of cotton velvets, and another of ticken, which is not inferior to that of Brussels. These, with linen and woollen cloth, lace, grain, wine, and cyder, form the principal articles of its trade. It is seated on the river Iton, 25 miles S. of Rouen, and 55 N. W. of Paris.

EURO'CLYDON, *s.* [from *euros*, the east wind, and *klydon*, a wave, Gr.] a wind which blows between the east and north in the Mediterranean, and is very dangerous. It is of the nature of a whirlwind, which when it falls suddenly on ships, causes them sometimes to founder.

EUROPE, the least of the four general parts or quarters of the world, is bounded on the W. by the Atlantic, on the N. by the Frozen Ocean, on the E. by Asia, and on the S. by the Black Sea and the Mediterranean. It is about 3300 miles in length, and about 2700 in breadth, and is situated between 10 deg. W. and 60 E. lon. and between 36 and 72 deg. N. lat. As it nearly all lies within the temperate zone, here is neither the excessive heat, nor the insupportable cold, of the other parts of the continent. Though it does not afford the richest productions of the earth, nor abound in costly mines, it is generally much more populous and better cultivated, in proportion to its extent, than the other quarters of the globe. The wild animals are but few, except in the woods, rocks, and mountains of the north, and of the Alps; but the domesticated are very numerous. The chief mountains are the Alps, Apennines, and Pyrenees. The principal rivers are the Danube, Dneister, Dnieper, Vistula, Volga, Dwina, Bog, Oby, Don, Scheldt, Rhine, Rhone, Seine, Loire, Garonne, Groyne, Tajo, Thames, and Severn. The principal lakes are those of Constance, Geneva, Lausanne, Wenner, Ladoga, and Onega. Europe contains the countries of Norway, Sweden, Denmark, Great Britain, Ireland, Russia, France, Germany, Poland, Spain, Italy, Portugal, Hungary, Swisserland, and part of Turkey, besides some islands in the Mediterranean and elsewhere. There are four empires, namely, those of Russia, Turkey, Austria, and France. The kings are those of the united kingdom of Great Britain and Ireland, Spain, Portugal, Prussia, Denmark, Sweden, Bohemia, Hungary, and Naples, or the Two Sicilies. The republics are now swallowed up in the French empire. The languages are the Latin, of which the Italian, French, and Spanish, are dialects; the Teutonic, from which proceed those of Germany, Flanders, Holland, Sweden, Denmark, and England; the Sclavonian, which reigns (though in disguise) in Poland, Muscovy, Bohemia, and a great part of Turkey in Europe; the Celtic, of which there are dialects in Wales, the Highlands of Scotland, Ireland, Bretagne, in France, and Lapland. Besides these, there are the Greek, and several others. The prevailing religious profession is the Christian, divided into the Greek, Romish, and Protestant churches. Mahometanism is the established faith of the Turks, and there are numberless Jews dispersed in the different countries.

EUROPE'AN, *a.* [from *Europa*, Europe, Lat. Some moderns accent it on the second syllable, but the authority of all the great poets is against them] belonging to, or a native of, Europe.

EU'RUS, *s.* [Lat.] the east wind.

EU'RYTHMY, *s.* [from *eu*, well, and *rythmos*, harmony, Gr.] harmony of verse or pronunciation.

EUSTA'TIA, St. one of the least of the Leeward Islands, in the West Indies, about 3 leagues N. W. of St. Christopher's. It is properly a mountain in the form of a sugar-loaf, or it may be termed, a huge pyramidical rock, whose top is hollow or concave, and serves as a large den for wild animals. It is strong by situation, having but one landing-place, which is difficult of access, and fortified with all the art imaginable, by its masters, the Dutch. Tobacco is its chief production. Not less than 5,000 white inhabitants, and about 15,000 negroes, subsist upon this island, and rear hogs, kids, rabbits, and poultry in such abundance, that they can afford to supply their neighbours, after having served themselves. In general, it serves as a storehouse for all kinds of European commodities. In 1781 it was surprised by Admiral Rodney, but was soon after taken by the French, and restored to the Dutch by the peace of 1783. Lat. 17. 29. N. lon. 63. 5. W.

EUTE'RPE, *s.* one of the nine Muses, to whom the invention of the mathematics, and playing upon the pipe, is ascribed.

EUTHANA'SY, *s.* [from *eu*, well, and *thanatos*, death, Gr.] easy death.

EUTY'CHIANS, *s.* in church history, heretics in the fifth century, who embraced the errors of the monk Eutyches, maintaining that there was only one nature in Jesus Christ. The divine nature, according to them, had so entirely swallowed up the human, that the latter could not be distinguished; insomuch that Jesus Christ was merely God, and had nothing of humanity but the appearance.

EVULSION, *s.* [from *evello*, to pluck up, Lat.] the act of plucking off.

EWE, *s.* [*eowe*, Sax.] a female sheep.

E'WEL, a town of Surry, having many fine streams of water, which uniting, form a river sufficient to drive a mill in the town, and which afterwards falls into the Thames at Kingston. It is 1½ mile N. of Epsom, 10 N. E. by N. of Darking, and 13 S. E. by S. of London. Market on Thursday.

In commerce, the fixing of the actual momentary value of money between different countries; the thing given or received in lieu of another; the place where merchants meet to negociate their affairs. *A bill of exchange* is that which is drawn by a person in one kingdom on one residing in another, for such a sum there as is equivalent to a sum paid or estimated here.

EXCHA'NGER, *s.* a person who remits money to foreign parts, or practises exchange.

EXCHE'QUER, (*exchéker*) *s.* [*exchequeir*, Norman Fr.] in the British jurisprudence, is an ancient court of record, in which all causes concerning the revenues and rights of the crown are heard and determined, and where the revenues are received. It took its name from the colour of the cloth which covered the tables of the court, which are party-coloured or chequered. This court is said to have been erected by William the Conqueror, its model being taken from a like court established in Normandy long before that time. Anciently its authority was so great, that it was held in the king's palace, and the acts thereof were not to be examined or controlled in any other of the king's courts; but at present it is the last of the four courts of Westminster.

EXCI'SE, (*excíze*) *s.* [*accijs*, Belg.] a certain duty or impost charged upon liquors, as beer, ale, cyder, &c. also on several other commodities, within the kingdom of Great Britain; and is one of the most considerable branches of the king's revenue. In England, the commissioners are nine, each of whom has a salary of 1000*l.* per annum. This duty was first granted to king Charles II. in 1660, for his life, in England and Wales, and has been continued in several parliaments since, and extended to Scotland.

EXCOMMU'NICABLE, *a.* liable or deserving to be excommunicated.

To EXCOMMU'NICATE, *v. a.* [*excommunico*, from *ex*, out of, and *communio*, communion, Lat.] to exclude or debar a person from partaking of the sacrament of the Lord's Supper.

EXCOMMUNICA'TION, *s.* [*excommunico*, to excommunicate, from *ex*, out of, and *communio*, communion, Lat.] an ecclesiastical penalty, or censure, whereby persons who are guilty of any notorious crime or offence, are separated from the communion of the church, and deprived of all spiritual advantages. In the ancient Christian church, the power of *excommunication* was lodged in the hands of the clergy, who distinguished it into the greater and less. The less consisted in excluding persons from the participation of the eucharist, and prayers of the faithful; but they were not expelled the church. The greater *excommunication* consisted in absolute and entire exclusion from the church, and the participation of all its rites; notice of which was given by circular letters to the most eminent churches all over the world, that they might all confirm this act of discipline, by refusing to admit the delinquent to their communion. The consequences were very terrible. The person so excommunicated was avoided in all civil commerce and outward conversation. No one was to receive him into his house, nor eat at the same table with him; and when dead he was denied the solemn rite of burial. The papal *excommunications* have been famous, or rather infamous through the world. In former ages, these fulminations were terrible things: but at present they are formidable to none. *Excommunication* disables a person from doing any judical act; as suing in an action at law, being a witness, &c.

To EXCO'RIATE, *v. a.* [from *ex*, out of, and *corium*, skin, Lat.] to flay, or strip off the skin.

EXETER, the ISCA of Ptolemy and Antoninus, an ancient city of Devonshire, one of the principal in the kingdom for building, wealth, and number of inhabitants. The environs of the city are hilly, and afford a variety of delightful prospects. The town, with its suburbs, is about 3 miles in circumference; its port is properly at Topsham, 5 miles below, but vessels of 150 tons come up to the quay here. Exeter has 12 or 13 incorporate companies; and, with its suburbs, contains 15 parish churches and 4 chapels of ease, beside the cathedral. It is the seat of an extensive foreign and domestic commerce, and particularly it has a share in the fisheries of Newfoundland and Greenland. Here are flourishing manufactories of serges and other woollen goods. It is seated on the river Exe, over which it has a long stone bridge, with houses on both sides, 78 miles S. W. of Bristol, 44 N. E. of Plymouth, and 173 W. by S. of London. Markets on Wednesday and Friday.

F.

F THE sixth letter of the alphabet, and fourth consonant, is by some reckoned mute, and by others a semi-vowel; its sound in English is invariable, formed by a compression of the whole lips and a forcible breath; it has much the same sound as the Greek φ, or *ph* in English words; and therefore in all words derived from the Greek, it should be written with *ph*, and in those of a Latin original with an *f*. Suetonius says, that the emperor Claudius invented the *f*, and two other letters; and that it had the force of *v* consonant, and was written inverted thus, ⅎ. As a numeral, F denotes 40, and with a dash over it thus, F̄, 40,000. In music, it stands for the bass cliff; and frequently for *forte*, as *ff* does for *forte, forte*. In medical prescriptions, *f* stands for *fiat, let it be done*; thus F. S. A. stand for *fiat secundum artem, let it be done according to art*. As an abbreviation F stands for *Fellow*, as F. R. S. for *Fellow of the Royal Society*.

FE'ATHER, (pron. *fether*, with *e* short) *s* [*feder*, Teut.] the covering of birds, and that by which they are enabled to fly. The mechanism of the feather is wonderful. The shaft, or rib, is exceedingly strong, but hollow below, for the sake both of strength and lightness, and above not much less strong, being filled with a pith that is both strong and light. The vanes in the flag part of the wing are nicely gaged, broad on one side, and narrow on the other; the edges of the exterior vanes bending downwards, and those of the interior or wider upwards, by which means they catch hold and lie close to each other when the wing is spread, so that not one feather may miss its full force, and impulse upon the air. The tips are all made sloping, those of the interior vanes sloping to a point towards the outer part of the wing, and the exterior vanes towards the body; so that the wing, whether extended or shut, is as neatly sloped and formed, as if constantly trimmed with a pair of scissors. Figuratively, kind, nature, or species. "I am not of that *feather*." *Shak.* An ornament; a mere empty title; a mere plaything, or something only fit to divert or cause laughter. "A wit's a *feather*." *Pope.* In farriery, a turning or parting of the hair on the forehead, resembling an ear of barley, or an eyelet hole.

FERMANA'GH, a county of Ulster in Ireland, 35 miles in length, and about 25 in breadth, containing 19 parishes. It is bounded on the W. by Leitrim and Donegal; on the N. by Donegal and Tyrone; on the E. by Tyrone and Monaghan; and on the S. by Cavan and Leitrim. It is navigable throughout its whole length, by means of the Lakes of Lough Erne; but travelling in it is difficult, in many places, by reason of the hilly, rugged, and uneven surface of the country, and the boggy grounds. The number of houses is calculated at nearly 12,000, and of the inhabitants at 72,000. The linen manufacture, and raising cattle, form the chief trade of this county. There is only one linen market in it, but the country abounds with spinners and good flax. The sales are averaged at 41,000*l.* annually. Enniskillen is the capital.

To FERME'NT, *v. a.* [*fermento*, Lat.] to exalt, rarefy, or communicate by putting the particles into an intestine commotion.

FERRA'RA, a district of Italy, lately in the pope's territories. The Ferrarese is now almost uncultivated, though formerly one of the finest countries in Italy. The air is unwholesome on account of the marshes, and the inhabitants are too few to drain them. The city of Ferrara has a number of fine buildings, which evince its former opulence; but the inhabitants, who are very few, in proportion to the extent of the place, bear every mark of poverty. Ariosto lies buried here in a Benedictine convent, and Tasso was confined as an idiot in the hospital of St. Anne. It is seated on a branch of the Po, 25 miles N. E. of Bologna.

FE'RREOUS, *a.* [*ferreus*, Lat.] of the nature of iron.

FE'RRET, *s.* [*furet*, Brit.] in natural history, an animal of the weasel kind, with red eyes, employed in catching rabbits and rats. It was originally introduced into Spain from Africa, and probably from Spain through the medium of the Romans into England.

To FE'RRET, *v. a.* to drive out of a lurking-place, alluding to the manner in which ferrets drive rabbits out of their holes.

FE'RRETER, *s.* one who hunts another, and discovers him in his hiding-places.

FE'RRIAGE, *s.* the sum paid for a passage at a ferry.

FE'RRO, or HIERO, the most westerly of the Canary Islands, remarkable for affording little water, except what is supplied by the fountain-tree, which grows here, (its top being always covered with a thick cloud,) and which distils water from its leaves in such plenty, as to satisfy the wants of its inhabitants. Many voyagers, at least, speak so; but the French geographers totally deny its existence; and, indeed, this tree has been but too long the subject of a popular error. It is more probable, that the inhabitants make use of what water they can collect in cisterns and reservoirs during the rainy season. Though not very fertile, the inhabitants raise corn, sugar, fruit, and legumes, and feed a great number of cattle. The western extremity of Ferro was, heretofore, by common consent, accounted the place of the first meridian; but the national partialities having induced the moderns to adopt the capital of their own particular countries, as the place from which to reckon the longitude; the following is its situation according to the English: Lat. 27. 47. N. lon. 17. 46. W.

FE'RRO, FARO, FAROL, or FAROER ISLANDS, 25 small islands in the Northern Ocean, subject to Denmark, of which 17 only are habitable. Each of these is a lofty mountain, rising out of the waves, divided from the others by deep and rapid currents. Some are deeply indented with secure harbours; all are steep, and most of them exhibit tremendous precipices. The soil is shallow, but remarkably fertile: barley, the only corn grown here, yields above 20 for 1; and the grass affords abundant pasturage for sheep; but no trees above the size of a juniper or stunted willow tree are to be seen here. Vast quantities of sea-fowl frequent the rocks, the taking of which furnishes a perilous employ for the inhabitants. Their exports are salted mutton, tallow, goose-quills, feathers, eider-down, knit woollen waistcoats, caps, and stockings. Lat. between 61. 15. and 62. 10. N. lon. between 5. and 7. 26. W.

FEUDAL, *a.* [*feudalis*, Lat.] pertaining to fees, feus, or tenures, by which lands are held of a superior lord. *Feudal Tenure*, an estate in land, given by the lord to his vassals in lieu of wages, upon condition to assist the lord in his wars, or to do him some other service. At first, the feudal estates were held absolutely at the will of the lord, but afterwards they were made hereditary; and duchies, earldoms, baronies, &c. were granted absolutely upon the condition of fealty and homage. The vassal was obliged to appear in the field upon his lord's summons, to follow his standard, to protect his person, and never to desert him, upon the score of danger, and to pay aids and taxes; upon non-performance of which, the estate was forfeited. About the year 990, *Hugh Capet* made these estates hereditary, and the French nobility began to take their surnames from their principal manors. *William the Conqueror* is said to have introduced these tenures into England. The granting these fees was anciently very solemn. In the empire, those that were considerable were granted by delivering a standard or banner; but the French passed them by delivering a ring and a staff.

FEUDATORY, *s.* [*feudatoire*, Fr.] one who holds by some conditional tenure from a superior.

FEZ, a large country of Barbary, in Africa, bounded on the W. by the Atlantic Ocean; on the N. by the Mediterranean Sea; on the E. by Algiers, and a part of Biledulgerid; and on the S. by Biledulgerid, Tafilet, and Morocco. It is near 400 miles in length, and from 70 to 280 in breadth. The air is temperate and wholesome, and the country is mountainous, particularly to the W. and S. near Mount Atlas. The forests abound with wild beasts, and the lions are the most daring and savage in Africa. The soil is fertile and populous, producing citrons, oranges, dates, almonds, olives, figs, raisins, sugar, honey, and corn, in abundance. Here are fine breeds of camels, beeves, sheep, and other cattle; and the horses are the finest in Barbary. It is watered by several rivers and streams, and the chief town is Fez; but Sallee is the principal port for their cruisers, or rovers, which are small, but full of men.

FEZZAN, a country of Africa, forming, according to the report of Mr. Lucas, a circular domain, in a vast wilderness, like an island in an ocean, is bounded on the north by Tripoli; on the E. by the deserts which divide it from Egypt; on the S. by Bornou, or Bernoa, and Cashna; and on the W. by the deserts of Zaara, lying between 25 and 30 degrees N. Latitude. It is an extensive plain, encompassed by mountains, except to the W. Among their tame animals are the sheep, cow, goat, camel, and a species of the domestic fowl of Europe. The wild animals, are the ostrich, and antelopes of various kinds. Adders, snakes, scorpions, and toads, are numerous, and sometimes crawl into their houses. The natives are of a deep swarthy complexion, inclining in their persons more to the negro than the Arab cast. They are tall, but indolent and inactive. Their dress is similar to that of the Moors in Barbary. Agriculture and pasturage are their chief occupations. The houses are built of clay, with a flat roof, composed of boughs of trees, on which a quantity of earth is laid. There are some venerable remains of ancient magnificence, and numerous smoking lakes, producing a species of fossil alkali, called trona. In their common intercourse, the sheriff (or governor) and the poorest of the people converse familiarly, and eat and drink together. In religion they are strict, but not intolerant Mahometans, and seem tolerably comfortable under their government, which is monarchial. Gold dust constitutes their chief medium of payment; and value in that medium is always expressed by weight. The sovereign, who is believed to be descended from their prophet, is tributary to the bashaw of Tripoli. Monrzouk is the capital of this country, which is said to contain 28 towns, and 100 villages.

FLEA, (*flee*) *s.* [Sax.] in natural history, a small red insect, remarkable for its nimbleness, which sucks the blood of human creatures, and other large animals. The flea, when examined by the microscope, is a very pleasing object. It is covered all over with dark, hard, and shelly plates, which are curiously jointed and folded over one another in such a manner as to comply with all the nimble motions of the creature. These scales are all curiously polished and are beset about the edges with short spikes, in a very beautiful and regular order. Its neck is finely arched, and much resembles the tail of a lobster; the head also is very extraordinary, for from the snout part of it there proceed the two fore legs, and between these is placed the piercer or sucker, with which it penetrates the skin to get its food. Its eyes are very large and beautiful, and it has two short horns or feelers. It has four other legs, joined all at the breast. These, when it leaps, fold short one within another, and then exerting their spring all at the same instant, they carry the creature to a surprising distance. The legs have several joints, and are very hairy, and terminate in two long, hooked, sharp claws. The piercer or sucker of the flea is lodged between its fore legs, and includes a couple of darts or lancets, which, after the piercer has made an entrance, are thrust further into the flesh, to make the blood flow from the adjacent parts, and occasion that round red spot with a hole in the centre of it, called a *flea-bite*. See the plate of Microscope.

FLORENCE, a celebrated and beautiful city of Italy, situated in the middle of the Vale of Arno. The prospect here is bounded on every side by an amphitheatre of fertile hills, adorned with villages, country-houses, and gardens. It was founded by the soldiers of Sylla, destroyed by Totila, and rebuilt by Charlemagne. For curiosities, this city is the principal in Italy, after Rome. The architecture of the houses, in general, is executed in a good taste, the streets are clean, and paved with large broad stones, chiseled so as to prevent the horses from sliding. The squares are spacious, and the palaces, churches, and other public structures,

are in a splendid style of architecture, with pillars, statues, pyramids, and fountains in almost every street. The city is divided into two unequal parts by the river Arno, over which there are 4 bridges, within sight of each other. That called Ponte de la Trinita is built of white marble, and adorned with 4 statues, representing the seasons, and other ornaments. The Florentine merchants were formerly men of vast wealth, and one of them, about the middle of the 15th century, built that grand fabric, which from the name of its founder, is still called the Palazzo Pitti. He failed under the prodigious expense of this building, which was immediately purchased by the Medici family, and continued till of late to be the residence of the grand dukes. Besides the gardens, furniture, antique statues, paintings, &c. which are justly and universally admired, here are various other curiosities, as the cabinets of arts, of astronomy, of natural history, of medals, of porcelain, of antiquities, &c. In the year 1530, Alexander de Medicis was created Grand Duke of Tuscany, by the Emperor Charles V. and in 1737, the family of Medicis became extinct, when Florence and the duchy of Tuscany fell to the duke of Lorraine, afterwards emperor. Florence is now included in the new kingdom of Etruria: it contains an university, and is 125 miles N. N. W. of Rome. Lat. 43. 46. N. lon. 11. 20. E.

FLO'RIDA, a country of North America, bounded on the W. by Louisiana, on the N. by Louisiana and Georgia, on the E. by the Atlantic, and on the S. by the Gulph of Mexico. It is divided into E. and W. East Florida extends about 350 miles from N. to S. and 160 from E. to W. West Florida is about 200 miles from E. to W. and 50 from N. to S. St. Augustine is the capital of the former, and Pensacola of the latter. The country about St. Augustine is the least fertile; yet even here two crops of Indian corn are annually produced. The banks of the rivers are of a superior quality, and well adapted to the culture of rice and corn. The interior country, which is high and pleasant, abounds with wood of almost every kind; particularly white and red oak, pine, hiccory, cypress, red and white cedar. The intervals between the hilly parts are extremely rich, and produce spontaneously all the fruits common to Georgia and the Carolinas. In many places, vines are successfully cultivated, and the ranges of cattle are immense. The Spaniards hold possession of Florida; but the Indians, or native Americans, are pretty numerous.

The soil is agreeably diversified, and yields corn, wine, and oil; figs, prunes, and various high-flavoured fruits; tobacco, hemp, flax, mann, saffron, and many drugs. Silk is also produced in great plenty. The forests are extensive, and the mineral productions various. Its situation is favourable to commerce, and the inhabitants have long availed themselves of many of their natural advantages. The principal rivers of France, are the Loire, the Rhone, the Garrone, the Seine, the Scheldt, the Rhine, the Somme, the Var, the Adour, &c. the advantages of which, in commerce and conveniency, are considerably improved by the artificial rivers and canals which have been executed. The most considerable mountains, besides the Alps and Pyrenees, are Mount Jura, the Cevennes, and Mount Dor. Wolves excepted, France contains few animals, wild or tame, that are not to be found in England. France was formerly an absolute monarchy, and divided into military governments or provinces. But in 1789 a wonderful revolution took place. The deranged situation of the finances of the country, occasioned in a considerable degree by the American war, had induced his most Christian majesty to convoke, first an assembly of the notables, or principal men in the kingdom, and next (on the ineffectual result of their deliberations) the states-general, which had not been assembled since the reign of Louis XIII. in 1614. These consisted of three orders, the nobility, clergy, and the third estate, or commons. The last were double the number of the other two orders united; and when a contest arose, whether the three orders should make three distinct houses, or be blended in one assembly, the third estate insisted upon the latter; and, assuming the title of the national assembly, they declared, that, as such, they were competent to proceed to business, without the concurrence of the other two orders. In the sequel, however, the nobility and clergy found it expedient to concede the point; and they all met in one hall. In the mean time, Paris was encircled by an army of 50,000 men, with the apparent view of coercing that city, if necessary. Notwithstanding this, on the removal of the popular minister, M. Neckar, in July 1789, a dreadful insurrection ensued in Paris; the military refused to fire upon the people; the formidable Bastile was captured by the citizens; the governor, and some

other obnoxious persons were beheaded; and their heads carried about, in horrid triumph, on poles; in a word, eight weeks after the opening of the states-general, and on the 5th of May, a revolution was effected, which then excited astonishment, and, since that period, even alarm and terror in all Europe. On the 17th of July, the king visited the Hotel de Ville at Paris, and surrendered himself, as it were, to his people. From that moment, from being an absolute monarch, he became one of the most limited in Europe. The national assembly, now triumphant, proceeded to the most extraordinary measures. They abolished nobility, and the whole feudal system, confiscated the possessions of the clergy, and suppressed all the monasteries. In October, in consequence of another dreadful riot at Versailles, the king, the royal family, and the national assembly, were removed to Paris. The king was now, in fact, a state prisoner, treated with the formalities appendant to royalty, but watched in all his motions with the utmost circumspection. From this irksome situation he attempted to escape, in June 1791, with the queen, his sister, the dauphin, and the princess his daughter. He had almost reached the frontiers, when he was arrested at Varennes, and conducted back to Paris. Such, however, was the moderation of the popular party, that no disastrous consequences ensued. The national assembly completed a new constitution, which was accepted by the king in September of the same year, when a new national assembly was elected. Harmony did not long prevail between this assembly and the king. Some of their decrees he refused to sanction; and, on their part, among other steps which could not fail to give umbrage to a once powerful monarch, was the disbanding his guard. France was now involved in a war against the king of Hungary; and the executive power was even suspected of acting in concert with him, and with the emigrant princes, and others, who were in arms against their country. In August 1792, the mayor of Paris, at the head of a deputation from that city, appeared at the bar of the national assembly, and demanded the deposition of the king. At this moment the Thuilleries, the royal residence, was attacked; the Swiss guards were defeated and massacred; and the king and royal family took refuge in the national assembly, who instantly decreed the suspension of the power of the king, and the convocation of a national convention. The king and his family were conveyed to a house in Paris, called the Temple, and there kept in close confinement, with circumstances of the most humiliating degradation. The convention met on the 21st of September, and instantly decreed the abolition of royalty, and the formation of a republic on the principles of what was termed liberty and equality. In December following they decreed that the king should be tried before them; and this tribunal, exercising at once the incompatible characters of accusers, prosecutors, and judges, condemned the unfortunate monarch; who, in pursuance of their sentence, was publicly beheaded, on the 21st of January, 1793. All Europe exclaimed against the injustice and cruelty of this proceeding. Powers, hitherto neutral in the war, were eager to take an active part in it; and the new republic, in addition to the arms of Austria, Prussia, Sardinia, and the empire, had to encounter the powerful combination of Great Britain, the United Provinces, and Spain. This formidable coalition of continental powers was, however, dissolved by the gigantic efforts of France, after having suffered the severest reverses, and having their countries overrun by the republican armies; by which France acquired a vast accession to her territory and population, which before had been reckoned at not less than 25 millions. Two forms of government were adopted by the French after the death of the king in 1793, the latter of which had for its outline the executive power entrusted to a directory of five persons, and the legislative to a council of antients and a council of five hundred. But on the 9th of November, 1799, this constitution was overturned by general Buonaparte (in concert with a few of the principal men) who placed himself at the head of affairs, with the title of first consul, having two other consuls associated with him in the government. The legislative councils were also very much abridged in their numbers, and had the names of the conservative senate, the legislative body, and the tribunate. Soon after this change was effected, the Roman Catholic religion was re-established in France, though, it must be confessed, on more moderate and liberal principles than it was before. However, on the 20th of May, 1804, the consular government was set aside, and Buonaparte was proclaimed emperor of the Gauls, and, on the 2nd of Dec. crowned by the pope at Paris with great pomp, and his power made hereditary in his family. To this title was soon after added that of king of Italy. Thus has an end been put to republicanism by its greatest champion; and France now, after the most wonderful efforts, finds herself under a monarchy in effect as absolute as that which the revolution overturned. The French in their manners appear more affable and easy than their neighbours on the east; less trifling and ceremonious than those on the south; and not so absorbed in the pursuit of gain as the English and Dutch. Their polite, elegant, and easy language, is more generally spoken than any other in the world.

FRANCE, Isle of, a ci-devant province of France, so called, because it was bounded by the rivers Seine, Marne, Oise, Aisne, and Ourque. Paris was the capital, and situated in the centre.

FRANCE, Isle of, or Mauritius, an island in the Indian Ocean, about 45 leagues in circumference. Indigo is the general object of cultivation, and attempts have been made to rear cochineal, as the island abounds with the plant on which the insects lie; but a small bird is sure to destroy them. Its ebony is the most solid, close, and shining, of any in the world. Here are numerous groves of oranges and citrons, and the pine-apple grows spontaneously in great perfection. Here is also abundance of black cattle, venison, and wild fowl, with potatoes, and other leguminous roots. There are two fine harbours, one on the E. side, and the other on the W. This island was first discovered by the Dutch, in 1598, who gave it the name of Mauritius, in honour of the prince of Orange. About 40 years after, they began to form settlements here; but in the beginning of the present century the colony was withdrawn, and the island was taken possession of by the French, in whose hands it has remained ever since. The inhabitants, black and white, amount to about 20,000. Lat. 20. 10. S. lon. 57. 29. E.

FRANCFORT ON THE MAINE, a free, imperial city of Franconia, noted for its two great annual fairs. The Calvinists and Jews here are numerous, industrious, and rich, but lie under divers sumptuary restrictions. The magistrates are Lutherans. FRIENDLY ISLANDS, a cluster of islands in the South Pacific Ocean, so named by Captain Cook, in 1773, on account of the friendship that seemed to subsist among the inhabitants, and their courteous behaviour to strangers. Tasman, the Dutch navigator, first touched here in 1643, and gave the names of New Amsterdam, Rotterdam, and Middleburg, to three of the principal islands. Cook explored the whole cluster, consisting of more than 60. New Amsterdam is the largest, extending 21 miles from E. to W. and 13 from N. to S. It is intersected by straight and pleasant roads, with fruit-trees on each side, which provide shade from the scorching heat of the sun. Middleburg is called Eooa by the natives, who have given the names of Annamooka, Tongataboo, Hapaee, and Leefooga, to the other principal islands. The general appearance of these islands conveys an idea of exuberant fertility; the surface, at a distance, seems entirely clothed with trees of various sizes, some of which are uncommonly large, particularly the tall cocoa-palm, and a species of fig, with narrow pointed leaves. It is almost wholly laid out in plantations, in which are some of the richest vegetable productions; such as bread-fruit, cocoa-nuts, plantains, yams, sugar-cane, and a fruit like a nectarine. Here are most of the articles which the Society Islands produce, and some which they have not. Their breed of hogs is as scanty as those of the Society Islands; but they received from the English some valuable additions to their stock, both of vegetables and animals. Their domestic fowls are as large as those of Europe. Among the birds are parrots and parroquets, of various sorts, which furnish the red feathers, so much esteemed in the Society Isles. The numerous reefs and shoals afford shelter to an immense variety of shell-fish. Agriculture, architecture, boat-building, and fishing, are the employments of the men; to the woman is confined the manufacture of cloth. These islands lie between 19. 40. and 21. 30. deg. S. lat. and between 170. and 180. of W. lon. Under the general name of Friendly Islands, are sometimes comprehended Boscawen's, Keppel's, and Prince William's Islands, and the group of the Hapaee Islands, amounting together to about 150.

FUEGO, FOGO, or ST. PHILIP, one of the Cape de Verd Islands in the Atlantic Ocean, higher than any of the rest, and appearing at sea to be one single mountain, though on the sides there are deep valleys. There is a volcano at the top of it, which burns continually, vomiting out fire and smoke, throwing up huge pieces of rock to a vast height, and sometimes pouring vast torrents of brimstone down the sides of the hill. The Portuguese, who first inhabited it, brought negroes with them, and a stock of cows, horses, and hogs; but their descendants are not now distinguishable in their complexions from the negroes. The island is without rivers, and almost without fresh water; yet it is fertile in maize, gourds, water-melons, wild figs, oranges, and apples. A great number of goats run wild upon the mountains, and the profit on their skins is a revenue of the crown. They export also the skins of cattle, horses, asses, and hogs. The island is nearly 5 leagues in length, and is about 330 miles W. of Cape de Verd, and 90 W. of St. Jago. Lat. 15. 10. N lon. 24. 20. W.

It is seated on the river Gogra, 65 miles E. of Lucknow, and 80 nearly N. of Allahabad. Lat. 26. 45. N. lon. 82. 24. E.

G.

G Is the seventh letter and fifth consonant of the English alphabet. The letter G is of the mute kind, and cannot be sounded without a vowel. It has two sounds, one of which is called hard, because formed by a hard pressure of the tongue against the upper gums; this sound it always retains before *a*, *o*, *u*, *l*, *r*; as *game*, *gat*, *gore*, *god*, *gun*, *gull*, *glass*, *grass*. The other sound, which is termed soft, resembles the sound of the *j*, and is commonly found before *e* or *i*, as in *gem* and *gibbet*; though not without exception; for in the words *get*, *giddy*, *gift*, *give*, and many more the reader will see pointed out in order, it retains the hard sound. At

the end of words, *gh* is often sounded like *ff*, as in the words *rough*, *tough*, &c. yet not always, as in the words *thorough*, *borough*, &c. where it has scarce any sound at all. Before *n*, at the end of a word, it is not sounded, but serves only to lengthen the vowel which comes before it, according to the French, from whence these words are derived; as *condign*, *malign*, which are pronounced *condin*, *malin*. It is often silent before *h* in the middle of words, as in *might*, which is sounded *mīt*. This seems to have been derived to us from the Saxons, who, as Dr. Hickes informs us, pronounce it, in the beginning, middle, and ending of words, like a *y*, as in *gute*, which some rustics still pronounce *yate*; *dag*, which we pronounce *day*; and in *sægl*, which we pronounce *sail*. As a numeral, G was antiently used to denote 400, and with a dash over it thus, $\bar{G}$, 40,000. In music, it is the character or mark of the treble cleff; and from its being placed at the head, or marking the first sound in Guido's scale, the whole scale took the name of Gamut.

GALE'NIC, or GALE'NICAL, *a.* a manner of treating diseases founded on the principles of Galen. Galenical medicines are those that are formed by the easier preparation of herbs, roots, &c. and by combining and multiplying ingredients; while those of chymistry draw their intimate or more remote virtues by means of fire and elaborate preparations; as calcination, digestion, fermentations, &c.

GALI'CIA, a name given to a country in the S. and S. W. of Poland, consisting of that part of Little Poland, which is S. of the river Vistula, almost the whole of Red Russia, and a slip of Podolia. It is now incorporated into the Austrian dominions, under the appellation of the kingdoms of Galicia and Lodomeria. The mountainous parts produce fine pasture; the plains are mostly sandy, but abound in forests, and are fertile in corn. The principal articles of traffic,

are cattle, hides, wax, and honey, copper, lead, iron, and salt. It extends from E. to W. about 280 miles in length, and from 60 to 100 in breadth. Lemburg or Leopold is the capital.

GALI'CIA, a mountainous province of Spain, bounded on the N. and W. by the sea; on the E. by Asturia and Leon; and on the S. by Portugal. It has more harbours than any other province of Spain, and the forests yield wood for ship-building. The principal produce is wine, flax, and citrons; and here are also good pastures. The population is not numerous. The mineral productions are copper and lead; Corunna and Ferrol are the principal ports, and St. Jago di Compostella is the capital.

GA'LIOT, *s.* [*galiotte*, Fr.] a little galley or sort of brigantine, built very slight, and fit for chase. It carries but one mast, and two or three pattereroes. It can both sail and row, and has sixteen or twenty seats for the rowers, with one man to each oar.

GALL, ST. or ST. GALLEN, a considerable town of the Thurgau, in Switzerland. The inhabitants are uncommonly industrious, and carry on an extensive commerce, arising from the manufactures of linen, muslin, and embroidery. Here is a rich and celebrated abbey, whose abbot is chosen by the 72 Benedictines who compose the chapter. The government of the town, which is entirely protestant, is aristo-democratical; the subjects of the abbot, whose territory is distinct, are catholics. To the library belonging to this abbey we are indebted for the preservation of the famous writings of Petronius Arbiter, Silius Italicus, Valerius Flaccus, and Quntilian, copies of which were found here in 1413. The town is seated in a narrow, barren valley, between two mountains, 57 miles N. E. of Zurich. Lat. 47. 26. N. lon. 9. 20. E.

GALL, (*gaull*) *s.* [*geala*, Sax.] a yellow juice, secreted from the blood in the glands of the liver, and lodged in a particular reservoir, called the *gall bladder*. GALLS, (*gaulls*) *s.* commonly called *Aleppo galls*, are a particular kind of vegetable tumors or excrescences like nuts, that grow upon the hardest species of oak, and are used in dying, making ink, &c. which, although they are as hard as shells, are nothing but the cases of insects that are bred in them, and which, when grown to maturity, gnaw their way out, which is the occasion of those little holes we see in them.

GALVANIC, in chymistry, belonging to galvanism.

GA'LVANISM, the name given to the influence discovered about 16 years ago by the celebrated Galvani, profes-

sor of anatomy at Bologna, and which, by himself, and some others, was at first, though improperly, called *animal electricity*. The experiments which have been made by philosophers, upon animal bodies, may be reduced to the following; which may suffice to give the reader a correct notion of the subject.—Lay bare about an inch of a great nerve, leading to any limb or muscle. Let that end of the bared part which is farthest from the limb be in close contact with a bit of zinc. Touch the zinc with a bit of silver, while another part of the silver touches, either the naked nerve, if not dry, or, whether it be dry or not, the limb or muscle to which it leads. Violent contractions are thus produced in the limb or muscle, but not in any muscle on the other side of the zinc. Almost any two metals will produce the movements; but, it is believed, the most powerful are the following, in the order in which they are here placed: 1. Zinc; 2. Tin; 3. Lead; in conjunction with, 1. Gold; 2. Silver; 3. Molybdena; 4. Steel, 5. Copper. Upon this point, however, authors are not perfectly agreed.

GA'LWAY, a county of Ireland, in the province of Connaught, about 75 miles long, and 46 broad. It is bounded on the N. by the counties of Mayo and Roscommon; on the E. by Roscommon, King's County, and Tipperary; on the S. by Clare and Galway Bay; and on the W. by the Atlantic Ocean. It contains 28 churches, 116 parishes, about 28,212 houses, and 112,000 inhabitants. A great part of it is fertile, being a warm lime-stone soil, which rewards the industry of the husbandman and shepherd: but is very coarse towards the N. and W. and, in those parts, rather thinly inhabited. The western coast contains many well-sheltered harbours, and is mostly bordered with green islands and rugged rocks.

GA'LWAY, a town of Ireland, in a county of the same name, of which it is the capital. It is advantageously situated for foreign trade on Galway Bay, in the Atlantic. The salmon and herring fisheries are carried on here with great spirit, and employ several hundred boats; the quantity of kelp manufactured and exported is considerable, and the increase of the linen manufacture, though of late introduction, is become very important. It is 40 miles W. S. W. of Athlone, and 108 W. by S. of Dublin.

GAMBA'DE, or GAMBA'DO, *s.* plural *gambades* and *gambadoes*; [from *gamba*, Ital.] a sort of leather boot fixed to a saddle, instead of stirrups, to put the legs in.

GA'NGES, a large and celebrated river of India, has its source in two springs near Mount Kentaiffe, in Thibet; the streams of which, after running 300 miles in a western direction, inclining to the N. turn to the S. unite their waters, and form what is properly called the Ganges, from the Hindoo word *ganga*, which signifies the river. This great body of water now forces a passage through Mount Himmaleh, a chain or ridge of mountains extending from Cabul along the N. of Hindoostan, and through Thibet; and sapping its very foundation, rushes through a cavern, and precipitates itself in a vast basin, which it has worn in the rock, at the hither foot of the mountains. From this second source (as it may be termed) of the Ganges, it takes a S. E. direction through the country of Sirinagur, until, at Hurdwar, it finally escapes the mountainous tract in which it has wandered about 800 miles. From Hurdwar, where it enters the plain country, it flows with a smooth navigable stream, during the remainder of its course to the Bay of Bengal, which it enters by several mouths. In its course through these delightful plains, it passes by Furruckabad, Allahabad, Benares, Patna, &c. and receives 11 rivers, some of which are equal to the Rhine, and none smaller than the Thames, besides others of inferior note. In the annual inundation of this immense river, the country is overflowed to the extent of more than 100 miles in width; nothing appearing above water but villages and trees, excepting, very rarely, the top of an elevated spot, the artificial mound of some deserted village, which appears like an island. The rise of the water is on an average about 31 feet. The Ganges is a most beneficial river, diffusing plenty by means of its living productions, enriching the lands, and affording an easy conveyance for the produce of its borders. The Hindoos hold its waters in high veneration. It is visited annually by pilgrims from all parts

of Hindoostan, and happy are those accounted whose lot it may be to perish it its streams.

GA'NGLION, *s.* [Gr.] in surgery, a hard moveable tumor.

GA'NGRENE, *s.* [*gangræna*, low Lat. *gangrene*, Fr.] in surgery, a disorder in any fleshy part of the body tending to a mortification, attended with some sensation of pain, and share of natural heat, the flesh it seizes turning black, and spreading itself to the adjacent parts.

It is seated on the river Wyre, (by which it communicates with all the late inland navigations,) on the road between Preston and Lancaster, from which latter place it is 11 miles S. and 224 N. N. W. of London. Market on Thursday.

GA'RTER, *s.* [*gardus*, Brit. *jartier*, Fr.] a string with which the stockings are tied up. A military order of knighthood, the most noble and antient of any lay order in the world, instituted by king Edward III. This order consists of twenty-six knights companions, generally princes and peers, whereof the king of England is sovereign or chief. They are a college or corporation, having a great and little

seal. Their officers are a prelate, chancellor, register, king at arms, and usher of the black rod. They have also a dean, and twelve canons, petty canons, vergers, and twenty-six pensioners, or poor knights. The prelate is the head. This office is vested in the bishop of Winchester, and has ever been so. Next to the prelate is the chancellor, which office is vested in the bishop of Salisbury, and has ever been so, who keeps the seals, &c. The next is the register, who is always the dean of Windsor, and who, by his oath, is to enter upon the registry the scrutinies, the elections, penalties, and other acts of the order, with all fidelity. The fourth officer is garter, and king at arms, being two distinct offices united in one person. Garter carries the rod and sceptre at the feast of St. George, the protector of this order, when the sovereign is present. He notifies the election of new knights, attends the solemnity of new installations, carries the garter to foreign princes, &c. He is the principal officer within the college of arms, and chief of the heralds. All these officers, except the prelate, have fees and pensions. The habit of the order upon solemn days is the garter, mantles, surcoat, hood, collar, great George, and cap; upon the collar days, they are only obliged to wear the garter, the collar of the order, and the great George; at the middle of the collar hangs the picture of St. George, sitting on horseback, who, having thrown the dragon upon his back, encounters him with a tilting spear. The garter, which is blue, was, at the foundation of the order, appointed to be worn a little below the knee of the left leg, which still continues, having this motto wrought on it, *Honi soit qui mal y pense*. The origin of this order is somewhat differently related. The common account is, that it was instituted in honour of a garter of the countess of Salisbury, which she dropped when dancing with king Edward, and which he picked up; but our best antiquarians think it was instituted on account of the victory over the French at Cressy, where the king ordered his garter to be displayed as the signal of battle.

GA'RTER, KING AT ARMS, *s.* an officer whose business it is to attend the service of the garter, for which he is allowed a mantle and a badge, a house in Windsor castle, and pensions both from the sovereigns and knights; also fees. See the foregoing article.

GENE'VA, an antient, large, and populous city and republic, on the confines of France, Savoy, and Switzerland. It is seated at the S. W. extremity of the lake of the same name, and is divided by the Rhone, which passes through the lake into two unequal parts. Geneva, which lies partly in the plain on the borders of the lake, and partly on a gentle ascent, is irregularly built. The houses are lofty; and many that stand in the trading parts of the city have arcades of wood, which are raised even to the upper stories. These arcades, supported by pillars, give a gloomy appearance to the street, but are useful to the inhabitants in protecting them from the sun and rain. It contains about 24,000 people; but the territory or district is small. They were in alliance with the Swiss Cantons; and after various revolutions, with which they have been agitated from time to time, for near two centuries, the democrats, in 1789, prevailed over the aristocracy, of which the senate and syndics, or chief magistrates, were composed. A constitution was established here, favourable to the rights of the people, and perhaps judiciously modelled between the two extremes; but it now forms an integral part of the French empire. The citizens of both sexes are remarkably well instructed; "and it is not uncommon," says Dr. Moore, "to find mechanics, in the intervals of labour, amusing themselves with the works of Locke, Montesquieu, and Newton, and other similar productions." It is 40 miles N. E. of Chamberry, and 126 N. W. of Turin. Lat. 46. 12 N. lon. 6. 10. E.

GE'NITING, *s.* [a corruption of *janeton*, Fr. signifying *Jane*, supposed to be so called in honour of some lady of that name] an early apple gathered in June.

GE'NITIVE, *a.* [*genitivus*, from *genero*, to generate, Lat.] in grammar, one of the six cases, by which property or possession is chiefly implied.

GE'NIUS, *s.* [Lat.] a supposed protecting or ruling power of men, places, or things; a person endowed with faculties superior to another; a perfection of understanding; a disposition by which any person is by nature qualified or inclined to any particular science or employment; nature or disposition.

GE'NOA, a city of Italy, lately capital of a republic of the same name, extending along the gulph of Genoa for about 120 miles; but of an unequal breadth, varying from 8 to 20 miles. In the year 1805 this country was annexed to France, and now forms an integral part of the French empire. The city of Genoa is about 10 miles in circumference, and built like an amphitheatre. The houses are 5 to 6 stories high, and well built, and the palaces and public buildings are numerous. The harbour is large and good, and, to preserve it, they have built a mole, 560 paces long, 13 broad, and 15 feet above the level of the water. It is populous, and one of the most commercial places in Italy. They have manufactures in velvet, plush, damask, and silk; and the banking business is carried on extensively. The ordinary revenue was about 200,000*l.* a year. The government was purely aristocratic, consisting of a great council of 80 persons, chosen out of the old and new nobility, in whom the legislative authority resided; but the administration of affairs was vested in a senate, consisting of a doge and 2 senators. The nobility are often employed in trade, and generally keep two or three years' provision of corn, wine, and oil in their magazines, which they sell to the people in scarce times. The Genoese fleet, antiently celebrated for its victories over the Saracens, Pisanese, Venetians, Spaniards, and Turks, and a long time masters of Sardinia, Malta, Majorca, Minorca, Candia, Cyprus, the Crimea, and other places in the archipelago, is now reduced to six galleys. It is 62 miles S. E. of Turin, and 224 N. W. of Rome.

GE'NTLE, *a.* [from *gens*, a nation, Lat.] of an antient and good family; pronounced in conversation genteel in this sense. Mild; tame; not easily provoked, applied to the temper; soothing or pacifying. SYNON. *Gentle* animals are naturally so; *tame* ones are so, partly by the art and industry of men. The dog, the ox, and the horse are gentle animals; the bear and the lion are sometimes *tame*.

GE'NTLE, *s.* a person of a good family; a gentleman. A kind of worm somewhat like a maggot, used for a bait in fishing.

GE'NTLEFOLK, *s.* persons distinguished by their birth from the vulgar.

GE'NTLEMAN, *s.* [*gentilhomme*, Fr.] a person of a noble birth, or descended of a family which has long borne arms. Chamberlain observes, that, in strictness, a gentleman is one whose ancestors have been freemen, and have owed obedience to none but the prince; on which footing no man can be a gentleman but one who is born such. But among us, the term *gentleman* is applicable to all above a yeoman; so that noblemen may be properly called gentlemen.

GE'NTLEMANLIKE, or GE'NTLEMANLY, *a.* becoming a man of birth.

GE'NTLENESS, *s.* softness; mildness; sweetness.

GE'NTLEWOMAN, *s.* a woman of birth, or one superior to the vulgar, both in wealth and behaviour.

GEORGE, (*Jorje*) *s.* [*Georgius*, Lat.] the figure of St. George on horseback, worn by the knights of the garter as an ensign of their order.

GEORGE I. succeeded on the death of queen Anne to the crown of Great Britain, August 1, 1714. He was the eldest son of Ernestus Augustus, duke, afterwards elector, of Brunswick-Lunenburg (or Hanover) by princess Sophia, daughter of Frederic, elector palatine, and king of Bohemia, and of Elizabeth, eldest daughter of King James I. He was born on May 28, 1660, and succeeded his father as elector of Brunswick-Lunenburg, 1698. The regency met, and gave immediate orders for his proclamation. On September 18, he landed with the prince his son at Greenwich, and on the 20th they made their public entry through the city to St. James's, attended by above 200 coaches-and-six of the nobility and gentry. The prince royal was declared prince of Wales; the king was crowned October 20; a new parliament met, March 17, 1715. In July the king gave the royal assent to an act for preventing tumults and riotous assemblies, commonly called the riot act, which is still in force. This year a rebellion broke out, which was headed by the earl of Mar, in Scotland, who set up the pretender's standard in September, in the Highlands, and caused him to be proclaimed in several places; and the earl of Derwentwater and others appeared in arms, in the north of England, in October, and proclaimed the pretender in several places. On November 12, they were attacked by the king's troops, commanded by the generals Wills and Carpenter, in Preston, where, after a smart firing from the windows, finding all the avenues to the town blocked up by the king's troops, on the 13th they desired to capitulate; but no other terms being allowed them than submitting to the king's mercy, on the 14th, at seven in the morning, they submitted. On the very day the rebels were subdued at Preston, Sunday, November 13, the duke of Argyle defeated the rebel army under the earl of Mar, consisting of about 8 or 9000 men, at the Riffmuir, about 4 miles from Aberdeen; and the earl of Mar retreated to Perth, after an obstinate fight, in which both sides claimed the victory; though the earl of Mar, being frustrated in his design of crossing the Forth, shewed the king's forces had the advantage. On December 22, the pretender arrived in a Dunkirk privateer in Scotland, where he was presently met and complimented by the earl of Mar, and other of his adherents; but being closely pursued by the king's troops, on February 14, the pretender with the earl of Mar, and some chiefs, found means to make their escape in a French ship which lay there, soon after which the rebels dispersed. Some submitted, and some were taken prisoners. Among them was their general Forster, as also the earls of Derwentwater, Nithisdale, Carnwath, Wintown, and other noblemen. Derwentwater and Kenmuir were beheaded on Tower-hill, February 24, 1715-16; Nithisdale and Wintown made their escape out of the tower; and, after the execution of some of the rebels, an act of grace passed. Robert Walpole, esq. was some time before made first commissioner of the treasury, and chancellor of the exchequer; and about the same time, the parliament attainted James Butler, duke of Ormond, of high treason, and confis-

cated his estate. A few weeks after, the king gave his royal assent to an act for enlarging the time of continuance of parliaments, whereby this and future parliaments were continued 7 years, unless sooner dissolved by the crown, instead of 3 years, as by the triennial act passed in the reign of king William. The clause in the act of settlement, whereby, after it took place, the sovereign was not to go out of the kingdom without consent of parliament, was repealed at the end of the session; and his majesty, having constituted the prince of Wales guardian of the realm in his absence, set out for his German dominions. July 7, there were frequent mobs and riots of both parties; and July 28, a mug-house, kept by one Read, where those who were well affected to the Hanover succession assembled, was attacked by the Jacobite party, when they proceeded to pulling down the house and destroying the goods. The sheriffs of London came, and read the proclamation; but this not availing, a party of the guards were ordered to march to the place; and as soon as they appeared, the mob dispersed, but five of the rioters were taken, tried, and found guilty, and hanged at the end of Salisbury court, in Fleet-street. In November 1717, after the christening of a prince, of which the princess of Wales was brought to bed, his royal highness, by some circumstance or other, fell under his majesty's displeasure, and was ordered to leave St. James's, which he did, and went to reside at Leicester-house. After this, whenever the king went abroad, he committed the administration of the government to lords justices; and all in the king's service were forbid to visit the prince's court at Leicester-house. Toward the end of this year a proclamation was published for lowering the gold-coin; whereby guineas, that before went for 1£ 1s. 6d. were ordered for the future to go for 1£ 1s. On July 31, Sir George Byng entirely defeated the Spanish fleet in the Mediterranean, the Spaniards having attacked the citadel of Messina in Sicily, which was agreed to be given up to the emperor. War was declared against Spain in December following, both by Great Britain and France. On March 10, his majesty acquainted the parliament that he had received intelligence from the French king of an invasion, intended from Spain, in favour of the pretender. The Spanish fleet of about 50 transports, convoyed by four men of war, having on board the late duke of Ormond, about 5000 men, and arms for twice their number, sailed from Cadiz; but was entirely dispersed by a storm, which lasted 48 hours. However, the late earls of Seaford and Mareschal, and the marquis of Tullibardine, landed at Kintailine, in Scotland, with about 400 men, mostly Spaniards, and were joined by about 1600 Highlanders; but major-general Wightman dispersed them, the Spaniards surrendering at discretion. Seaford, Mareschal, and Tullibardine, found means to get back to Spain. Lord Cobham took Vigo, and several incursions were made on the Spanish coast this year. The year 1720 was remarkable for the South-sea scheme, when the greatest part of the nation turned stock-jobbers; South-sea stock rose and fell till it came to above 1000; but it fell faster than it rose, and many families were ruined by it, while a few got vast riches. The directors' estates were sold for the benefit of the sufferers; and they were incapacitated from sitting in either house of parliament, or holding any office or place of trust, for ever. Sir Robert Walpole, who had resigned, was again made chancellor of the exchequer and first lord of the treasury; which posts he held to the end of this reign, and 15 years after. In April, 1720, a reconcilation of the royal family was brought about, and the prince of Wales attended his majesty at St. James's. At his return he was attended by a party of the yeomen of the guards, as also of the horse-guards; and immediately the foot-guards began likewise to mount guard at Leicester-house. April 15, 1721, the princess of Wales was delivered of William Augustus, duke of Cumberland. On June 22, 1722, died the great duke of Marlborough, whose obsequies were performed on August 9, with the utmost solemnity and magnificence. A new parliament met on October 9, 1722, when the king acquainted them with a conspiracy for overturning the established government, and setting up the pretender. Christopher Layer, a counsellor of the temple, was executed at Tyburn, May 17, 1723, and his head fixed upon Temple-bar, for being concerned in it. The parliament passed bills for inflicting pains and penalties on bishop Atterbury, Kelly, and Plunket, on the same account; whereby the first was banished, and the two last imprisoned for life. In 1725, the earl of Macclesfield, lord high chancellor, resigned the seals, and was fined 30,000£, and committed to the tower till he paid it. He was succeeded by Sir Peter King, lord chief justice of the Common Pleas. The same session, Henry St. John, lord viscount Bolingbroke, was restored to his estates, and an act passed for that purpose, though he was not restored to his title. The same year, 1725, the order of the Bath was revived, and 37 new knights were installed; about which time several of the Scotch Highland clans were disarmed by general Wade. Toward the end of this year died, in the castle of Athlen, where she had lived many years, Dorothy Sophia, who was married to his majesty 1682, and by whom he had issue, his late majesty, born October 30, 1683, and Dorothy Sophia, queen dowager of Prussia, who was born 1687. On September 3, 1725, a treaty was concluded between Great Britain, France, and Prussia; though the last, in effect, soon deserted this alliance; but the States-General afterwards acceded to it. This treaty was designed as a balance to one which had been concluded between the courts of Vienna and Madrid. These counter-alliances put Europe again in a flame, and three British squadrons were fitted out; one sent to the West Indies, another to the coast of Spain, and the third to the Baltic. In the beginning of the year 1727, the Spaniards laid siege to Gibraltar, which, though it was suspended upon preliminary articles for a general pacification being signed, was not ratified till some time after the king's death. The parliament, which met on January 17, was prorogued on May 15. On June 3, his majesty embarked on board the Carolina yacht, and landed the 7th at Vaert in Holland, where he lay that night; on the 9th he arrived at Delden, between 11 and 12 at night, seemingly in good health. He set out next morning about 3 o'clock, was taken ill on the road, and died at his brother the duke of York's palace at Osnaburgh, June 11, 1727, in the 68th year of his age, the 13th of his reign. George I. was plain and simple in his person and address; grave and composed in his deportment, though easy, familiar, and facetious in his hours of relaxation. Before he ascended the throne of Great Britain, he had acquired the character of a circumspect general, a just and merciful prince, and a wise politician, who perfectly understood, and steadily pursued, his own interest. With these qualities, it cannot be doubted but that he came to England extremely well disposed to govern his new subjects according to the maxims of the British constitution, and the genius of the people; and, if ever he seemed to deviate from these principles, we may take it for granted that he was misled by the venal suggestions of a ministry whose power and influence were founded on corruption. From the death of Charles II. to this period, England made a considerable figure in every branch of literature. Dr. Atterbury and Dr. Clarke distinguished themselves in divinity; Mr. Whiston wrote in defence of Arianism; John Locke shone forth the great restorer of human reason; Cudworth traced the whole labyrinth of metaphysical argumentation; the earl of Shaftsbury raised an elegant though feeble system of moral philosophy; Berkeley, afterwards bishop of Cloyne in Ireland, surpassed all his contemporaries in subtlety, and variety of metaphysical arguments, as well as in the art of deduction. Lord Bolingbroke's talents as a metaphysician have been questioned since his posthumous works appeared; great progress was made in mathematics and astronomy by Wallis, Halley, and Flamstead; the art of medicine owed some valuable improvements to the classical Dr. Freind and the elegant Dr. Mead. Among the poets of this æra we number John Philips, author of a didactic poem called Cyder, a performance of real merit, he

lived and died in obscurity; William Congreve, celebrated for his comedies, which are famous for wit, elegance, and regularity; Vanburgh, who wrote with more nature and fire, though with less art and precision; Steele, who in his comedies successfully ingrafted modern characters on the antient drama; Farquhar, who drew his pictures from fancy, rather than from nature, and whose chief merit consists in the agreeable pertness and vivacity of his dialogue; Addison, whose fame as a poet greatly exceeded his genius, which was cold and enervate; though he yielded to none in the character of an essayist, either for style or matter; Swift, whose muse seems to have been mere misanthropy; he was a cynic rather than a poet, and his natural dryness and sarcastic severity would have been unpleasing, had not he qualified them by adopting the extravagant humour of Lucian and Rabelais; Prior, lively, familiar, and amusing; Rowe, solemn, florid, and declamatory; Pope, the prince of lyric poetry, unrivalled in satire, ethics, and polished versification; the agreeable Parnel; the wild, the witty, and the whimsical Garth; Gay, whose fables may vie with those of La Fontaine, in native humour, ease, and simplicity; and whose genius for pastoral was truly original. Dr. Bentley stood foremost in the list of critics and commentators. Sir Christopher Wren raised some noble monuments of architecture. The most remarkable political writers were Davenant, Hare, Swift, Steele, Addison, Bolingbroke, and Trenchard.

GEORGE II. (then in the forty-fourth year of his age) was proclaimed king of Great Britain on the 15th of June, 1727, being the day after the express arrived with the account of the death of his father. All the great officers of state continued in their places; Sir Robert Walpole kept possession of the treasury; and the system of politics established by the late king underwent no alteration. The parliament meeting on the 27th, both houses presented addresses of condolence and congratulation. The 29th, the commons resolved unanimously to grant to his majesty the same civil list, viz. 700,000£ per annum, as had been enjoyed by his father. On the 7th of August this parliament was dissolved, and a new one summoned. On the 11th of October the coronation of the king and queen was performed at Westminster Abbey with the usual solemnity. The 23d of January, 1728, the new parliament met, when warm disputes passed on the increase of the national debt; the debates, however, terminated in favour of the ministry. On the 27th of May his majesty put an end to the session. In the beginning of December his majesty's eldest son prince Frederic arrived in England from Hanover, where he had hitherto resided; was introduced into the privy council, and created prince of Wales. The congress opened at Soisions, for determining all disputes among the powers of Europe, proved ineffectual. The Spaniards still continued their depredations with impunity on the commerce of Great Britain. The court of Spain, indeed, at this juncture, seemed cold and indifferent with regard to a pacification with England. It had renewed a good understanding with France, and now strengthened its interest by a double alliance of marriage with the royal family of Portugal. The infanta of this house was betrothed to the prince of Asturias; while the Spanish infanta, formerly affianced to the French king, was now matched with the prince of Brazil, eldest son of his Portuguese majesty. The parliament meeting, according to their prorogation, on the 21st of January, 1729, in consequence of petitions delivered from the merchants of London, Liverpool, and Bristol, complaining of the Spanish depredations; the commons addressed his majesty to use his utmost endeavours to check such depredations; in answer to which the king assured them that he would use the best endeavours to answer the desires of his people. An inquiry was made into the state of the public gaols; and it appearing that great cruelties had been practised in them, particularly on Sir William Rich, baronet, who was found in the Fleet prison loaded with irons, by order of the warden; Thomas Bambridge, the then warden, and John Huggins, the late, &c. were committed close prisoners to Newgate. The 14th of May the king put an end to the session; and, having appointed the queen regent, went to Germany in order to settle some differences between the regency of Hanover and the king of Prussia. The parliament assembling on the 13th of January, his majesty 1730
congratulated them on his having concluded a peace with Spain. His speech, however, produced warm debates in both houses, in which the treaty of Seville did not pass inquiry without severe animadversion. The emperor was so greatly offended at this treaty, that he prepared for war. Being in want of money, he set on foot a negociation for a loan in England, of 400,000£ which alarmed the ministry, who imagined that it would be made use of to disturb the repose of Great Britain; and therefore a bill was brought in, to prevent the subjects of England from lending money to foreign powers, without the king's licence for that purpose, and was carried into a law. An endeavour was now made to lay open the East India trade, the charter of that company being then very near expiring. April the 9th, petitions were presented to the house of commons for that purpose; but notwithstanding their being warmly recommended by Sir John Barnard, and other eminent merchants, they were rejected, and the exclusive privilege vested in the company was protracted, by act of parliament, to the year 1766. Various other bills passed this session: the salt-tax was reduced; and a most excellent act passed for the better regulating of juries, which now prevents their being packed. The parliament was then prorogued to the 14th of July following. During this year every part of the kingdom was infested with robbers, assassins, and incendiaries. The sessions of parliament opened on Jan. 21. The emperor and his mi- 1731
nisters still continued to exclaim against the treaty of Seville. The address of thanks for his majesty's speech gave rise to strong debates in the house of commons. About this time a famous periodical paper, entitled the Craftsman, made its appearance. The late lord Bolingbroke assisted in writing it; but the avowed patron was said to be Mr. William Pulteney, who fought a duel in the Green Park with lord Hervey, on occasion of a remarkable political pamphlet. All law proceedings were ordered to be no more in Latin, but in English. The duke of Parma and Placentia dying in January this year, the imperial troops took possession of those duchies; though by the treaty of Seville they were guaranteed to Don Carlos, son to the king of Spain, and were also bequeathed to that prince by the late duke, in case the child, of which he then supposed his duchess to be pregnant, was still born, or should die after its birth. Though this step seemed to threaten an immediate war, his Britannic majesty and the States General interposed their mediation so effectually with the emperor, that he concluded a treaty with them, consenting to withdraw his troops from Parma and Placentia, on condition that the contracting powers concerned in the treaty of Seville should guaranty the Pragmatic Sanction, or succession of the Austrian hereditary dominions, to the heirs female of the emperor, in case he should die without male issue. A new treaty, confirming this, was afterwards signed at Vienna, on July 22, between the emperor and the kings of Great Britain and Spain; and the States General, after many difficulties, at last acceded to it, by which the Ostend East India company was abolished. In consequence, Sir Charles Wager sailed with a fleet for Spain; Don Carlos was quietly settled in Italy; and, on the duchess of Parma not proving pregnant, Sir Charles returned to England. The parliament met on the 13th of Ja- 1732
nuary, when the dispute for and against a standing army was carried on, on both sides, with equal warmth, and sometimes acrimony. A bill passed both houses for reviving the salt duties. The affair of the charitable corporation being brought in, it appeared that some of its managers had been guilty of the most iniquitous proceedings; upon which Sir Rober Sutton and Sir Archibald Grant, were expelled the house. On this occasion, a letter from Belloni, the pretender's banker at Rome, relative to the charitable corporation, was burnt by the common hangman at the Roya-

Exchange. A most infamous fraud was discovered by lord Gage in the sale of the forfeited estate of the late earl of Derwentwater; for which serjeant Birch and Dennis Bond esq. were expelled the house. The session was closed the 1st of June. This summer his majesty visited his German dominions; the queen being left as regent. The colony of Georgia was planted now by general Oglethorpe. The following remarkable instance of suicide happened in England this year. Richard Smith, a book-binder, and prisoner for debt within the liberties of the King's-bench, persuaded his wife to follow his example, in making away with herself, after they had murdered their little infant. This wretched pair were in the month of April found hanging in their bed-chamber at about a yard's distance from each other; and in
1733 a separate apartment the child lay dead in a cradle. The session of parliament, which opened on Jan. 16, besides the usual debates on the pension bill, standing army, and the Spanish depredations, was distinguished by the famous *Excise Scheme*, which had almost produced a rebellion among the people, who clamoured so loudly against it, through all parts of the kingdom, that the ministry thought proper to drop the design. The commons voted 80,000£ as a marriage-dower for the princess royal, who was married to the prince of Orange (who came to England in November) on the 14th of March in the following year. They also voted 10,000£ for the purpose of transporting a great number of protestant Saltburghers, (who had fled their native country on account of a persecution raised against them on the score of their religion) to the infant colony of Georgia. The session ended on the 4th of June. On the first of February this year died Augustus II. king of Poland, which gave rise to a dreadful war in Europe. Three parties were formed on this occasion; one in favour of Stanislaus, another for the elector of Saxony, and a third for a native of Poland, exclusive of Stanislaus, who was then in France, and was at last proclaimed king of Poland. Being his most Christian majesty's father-in-law, he was greatly assisted by that monarch, and arrived by land at Warsaw. Immediately the French king's troops under the duke of Berwick marched to the Rhine, and were very successful. Their arms were equally triumphant in Italy. An alliance had been projected between France, Spain, and Sardinia, in order to raise Don Carlos to the thrones of Naples and Sicily. Duke de Villars commanded under the king of Sardinia in Italy, where their arms made a very rapid progress against the imperialists, from whom they took many towns. About this time the earl of Chesterfield resigned his post of lord high steward; the duke of Bolton and lord Cobham were deprived of their regiments; and lord King resigning the office of chancellor, it was conferred on Mr. Talbot, together with the title of a
1734 baron. The parliament was opened on the 17th of January. In this session, which was no less fertile in disputes between the ministry and opposition than any of the preceding, a bill to prevent the infamous practice of stock-jobbing was carried through both houses, and passed into a law for three years. On the 16th of April the session ended, soon after which the parliament was dissolved. About this time lord Stair was deprived of his regiment of dragoons for his conduct in parliament. On the continent, king Stanislaus was obliged to fly secretly from Dantzic, and leave the crown of Poland to Augustus, elector of Saxony. The French were very successful in Germany. Prince Eugene commanded the imperial army; and the duke of Berwick, who headed that of France, was killed before Philipsburgh. There was a very bloody campaign in Italy. Don Carlos took possession of Naples, of which his Catholic majesty had declared him king. Count de Mercy, who commanded the imperialists, was slain in the battle of Parma. Marshal Broglio, a French general, was routed, and lost about 2000 men. The great success of the French was owing chiefly to the bravery and conduct of the king of Sardinia. England, during these transactions, preserved a neutrality; and kept up a great naval force under the command of Sir John Norris, an able, though not a successful commander. Negociations were entered into at the Hague for peace. Considerable armaments were carrying on in England, in order to preserve its tranquillity. The pretender's eldest son served with peculiar marks of distinction in the army of Don Carlos. The new parliament was opened on Jan. 14.
1735 The election of the 16 Scotch peers engrossed the attention of the public and the parliament for some time. Great alterations were made in the mutiny bill; the officers who enlisted men were required to carry every person who entered, before a magistrate, in order for such person to declare his assent or dissent. His majesty was addressed on the Spanish depredations; but the session breaking up on May 15, nothing was done in that matter. Soon after the king visited his German dominions, leaving the queen regent. The conferences still continued at the Hague; where at last a suspension of arms was agreed on, during which the negociations for a general peace in Germany and Italy were continued. A quarrel breaking out between the courts of Madrid and Lisbon, the latter applied for assistance to the king of Great Britain, who sent Sir John Norris, with a powerful squadron, to Lisbon. The parliament met on
1736 Jan. 15, and repealed the old statutes of England and Scotland against conjuration, witchcraft, and dealing with evil spirits; and passed an act for restraining the retail of spirituous liquors, the mortmain act, another for the prevention of smuggling, and another for building a bridge at Westminster. The session closed on May 20, soon after which the king paid a visit to his German dominions. On the 27th of April the prince of Wales was married to the princess of Saxe Gotha. The other remarkable incidents of this year were these; the king erected a new post of honour, entitled field-marshal of the armies of Great Britain. A great disturbance happened at Edinburgh, occasioned by the execution of one Wilson, a smuggler. Porteous, captain of the city-guard, having commanded the soldiers to fire among the populace, several innocent persons were killed; Porteous, being tried for his life, was found guilty; but being respited by the queen (then regent,) the mob forced open the prison doors, dragged forth Porteous, and hung him upon a dyer's pole; at which outrage her majesty and the administration were greatly offended. There now started up a new state phenomenon, Theodore Baron Stein, born near Cologn, in Germany. He had landed in Corsica, subject to the Genoese, who had treated the Corsicans with great rigour. The baron, being received with open arms by the insurgents, was elected, and crowned their king; upon which he headed their troops. Failing afterwards in his promises of men, money, &c. the Corsicans grew weary of him; whereupon he left their island. He had the air of a great man, but his parts were not shining, his principal talent being a little cunning; besides which, he was insolent and cruel. By this time all the belligerent powers in Italy had agreed to the preliminaries of peace concluded between the emperor and France. Don Carlos was crowned king of Sicily; Stanislaus abdicated the crown of Poland; and Augustus was universally acknowledged sovereign of that kingdom. The preliminaries were approved and accepted by the diet of the empire; the king of Spain sent orders for his troops to evacuate Tuscany; and the provinces in Italy yielded to the house of Austria. Prince Eugene, who had managed the interests of the emperor on this occasion, did not live to see the happy fruits of his negociation. He died at Vienna, in April, at the age of seventy-three, leaving behind him the character of an invincible hero, and consummate politician. The beginning of this year was distinguished by a rupture in the royal family, occasioned by the prince of Wales
1737 carrying away the princess of Wales, then near her time, from Hampton court, where their majesties resided, to St. James's, where she was that night delivered of the princess Augusta, now princess of Brunswick. This breach was greatly widened by a motion being made in parliament (which was opened by commission Feb. 1.) to settle 100,000£ per annum on the prince of Wales, in the same manner his

majesty enjoyed it before his accession to the throne. This motion, however, was carried in the negative. The most remarkable bills passed this session were, a bill for punishing the magistrates in the city of Edinburgh on account of the murder of captain Porteous; and another for limiting the number of play houses, and subjecting all dramatic pieces to the inspection of the lord-chamberlain, commonly called the *playhouse bill.* In February died lord chancellor Talbot, universally lamented, who was succeeded on the bench by lord Hardwicke; and on November 20 died queen Caroline, in the 55th year of her age. The affair of one Jenkins, 1738 who was said to have had his ears cut off by the crew of a Spanish guarda costa, and who appeared at the bar of the house of commons, excited great indignation both in that assembly and in the whole nation. Petitions, complaining of the Spanish depredations, were presented to the house from various quarters. An address was presented to his majesty, who soon after sent a strong squadron to the Mediterranean. The effect of this vigorous disposition was, that in September, preliminaries were signed for an accommodation between the courts of England and Spain. On the 24th of May (O. S.) his present majesty was born. 1739 On the 14th of Jan. the famous CONVENTION treaty was concluded between the courts of Great Britain and Madrid, which occasioned very warm debates in both houses of parliament, and against which petitions were presented from all parts of the kingdom. Disputes were carried so high in the house of commons, that many eminent members of the minority retired from parliament, and 40 peers entered their protest against the address for thanking his majesty for laying the convention before them. Notwithstanding the convention so recently concluded, the behaviour of the Spaniards was so insolent, that a rupture with them became inevitable. War was accordingly declared against Spain, and admiral Vernon sent in July with a squadron of ships to annoy their commerce and settlements in America, where in November, he took the town of Porto Bello. Mr. Whitfield's followers first appeared under the name of Methodists; and the close of this year and the beginning of the next were distinguished by as great a frost as ever was known in England. A strong armament being sent against the Spa- 1740 nish West Indies under lord Cathcart, occasioned the French to lay aside the neutrality they had before professed, and to declare in favour of the Spaniards, by sending a fleet of 12 large ships to their assistance. On the 8th of May, the princess Mary was married by proxy to the prince of Hesse Cassel. In June advice was received from admiral Vernon, that he had bombarded Carthagena and taken fort Chagre. On the 20th of October, Charles VI. emperor of Germany, the last prince of the house of Austria, died at Vienna, and was succeeded in his hereditary dominions by his eldest daughter the archduchess Maria Theresa, married to the grand duke of Tuscany. Though she succeeded as queen of Hungary, by virtue of the pragmatic sanction guaranteed by all the powers in Europe, her succession produced such contests as kindled a cruel war in the empire. The young king of Prussia was no sooner informed of the emperor's death, than he entered Silesia at the head of 20,000 men, seized certain fiefs to which his family laid claim, and published a manifesto, declaring that he had no intention to contravene the pragmatic sanction. The elector of Bavaria refused to acknowledge the archduchess as queen of Hungary and Bohemia. His majesty, in his speech to the parliament, declared strongly in this princess's favour; and 300,000£ were granted to enable him to support her. Debates ran very high this session against the minister and his measures. A strong protest was entered by 21 peers, warmly reflecting on Sir Robert Walpole's management during the course of the war; and a variety of motions were made in both houses, tending to shew the necessity of removing him from his majesty's presence and councils. The year 1741 was remarkable for general Wentworth and admiral Vernon's unsuccessful expedition against Carthagena, in which it is computed 20,000 British subjects lost their lives. The affairs of the continent were now more than ever embroiled. The queen of Hungary refusing to comply with the king of Prussia's demand of part of Silesia, that monarch prosecuted his conquests with great apidity. France resolved to seize this opportunity of crushing the house of Austria. In order to prevent the queen of Hungary from receiving the promised succours from his Britannic majesty, she poured a numerous army into Westphalia, which produced a neutrality for Hanover; and the king of Great Britain promised to vote, at the ensuing election of an emperor, for the elector of Bavaria. The design of the French court was to raise this prince to the imperial dignity, and furnish him with such succours as should enable him to deprive the queen of Hungary of her hereditary dominions. With this view she sent two large bodies of troops into Germany; and the elector of Bavaria, seeing himself at the head of 70,000 men, declared war against her Hungarian majesty, and made so rapid a progress, that Vienna itself was threatened. Being joined by the elector of Saxony, he took Prague, and was crowned king of Bohemia. But by turning aside to Bohemia, instead of marching to Vienna, he entirely ruined his affairs. In the new parliament the minister was attacked with such spirit and violence, that he resolved to resign. He still attended the house, till the decision of the Chippenham election, 1742 which was carried the 2d February against him, by one vote only. He had been treated with so little ceremony during the course of the debate, that he protested in the lobby he would never enter the house again; and prince Frederic declaring, that he thought Sir Robert Walpole so great a bar between his majesty and his people, that he could agree to no terms of reconciliation till he should be removed, Sir Robert resolved to retire from power, and give up all his places. This he did accordingly the 11th of February, after having been created by his majesty baron of Houghton, viscount Walpole, and earl of Orford. The day after his resignation, the opposition had a grand meeting; the purport of which was, to bring him to justice, and to execute their constitutional points. The heads of the opposition all met at court, when a reconciliation was made between his majesty and the prince of Wales. Sir Robert Walpole's removal did not alter the measures; but there were many changes in the higher employments. Mr. Sandys was appointed chancellor of the exchequer, lord Wilmington first lord of the treasury, lord Harrington lord president, lord Carteret secretary of state, the marquis of Tweedale secretary of state for Scotland, the duke of Argyle master of the ordnance, and Mr. Pulteney was restored to the dignity of a privy-counsellor. A considerable promotion was made of general officers, and great changes in the inferior departments. An inquiry was made into the conduct of Sir Robert Walpole, in the course of which it appeared that he had been guilty of many mal-practices; but before the report of the committee, who sat for that purpose, was finished, the parliament was prorogued, and thus the inquiry dropped. On the 12th of February the elector of Bavaria was chosen emperor of Germany. However, the queen of Hungary's affairs had taken a very auspicious turn. A bloody battle was fought at Czaslau, between the king of Prussia and prince Charles, in which the former had the advantage. By the happy influence of his Britannic majesty, a treaty was concluded between Austria and Prussia, whereby Silesia was given up to the latter; to which treaty Saxony also acceeded; and peace was proclaimed at Dresden Sept. 17. This obliged the French to retire with great precipitation and loss to Prague, which prince Charles besieged with 60,000 men, there being 26,000 men in that city. Negociations were carried on between the generals on the respective sides. During the siege of Prague, the French made many desperate sallies; but being at last pressed by famine, Maillebois marched with 42,000 men to its relief. Count de Saxe then made his appearance at the head of a French army. Prince Charles turned the siege of Prague into a blockade. The Austrians finding themselves too weak to

continue the blockade before Prague, raised it; upon which the marshals Belleisle and Broglio marched out of that city, but were afterwards forced to return into it. Maillebois proved himself an able general during all this expedition. At last marshal Belleisle, with great skill and judgment, marched his army out of Prague, and reached Egra in 12 days without losing a man (according to his own account) except by the severity of the weather. In order to make a diversion in favour of the queen of Hungary, 16,000 British troops were embarked for the Netherlands, under the command of the earl of Stair, where they were joined by another body of Hanoverians and Hessians. A body of Austrians had also been before assembled in that country; but all these troops went into winter-quarters without executing any enterprise. Nov. 17, 1743, princess Louisa, his majesty's youngest daughter, was married by proxy to the prince royal of Denmark. The British fleet under Sir Chaloner Ogle was no ways fortunate in America. Commodore Knowles was sent out with a squadron of ships to attack La Guirie and Porto Cavallo, on the coasts of the Caraccas; but this attempt miscarried. He afterwards attacked Porto Cavallo, but without success. A revolution in the ministry took place this year. Mr. Pelham being placed at the head of the ministry. In the Netherlands, the English and French armies came to an engagement at the village of Dettingen. The order of battle, as directed by his Britannic majesty, was very masterly. The king advancing to the front of his army, gave fresh spirits to the soldiers. The British troops fired too soon, upon the marching up of the enemy; when the French black musquetaires, detaching themselves from their lines, and galloping between the allied foot, were all cut to pieces. The firing now became general; when the presence of his Britannic majesty, who was in the posts of the greatest danger, and behaved with the noblest intrepidity, fixed the fate of the day. Marshal Noailles shewed great bravery in this battle. The duke of Cumberland, being in the hottest of the engagement, was wounded in the calf of the leg. Hereupon marshal Noailles, after losing the flower of his army, ordered a retreat. In this battle the French lost 6000 men, and a multitude of officers, with some trophies; and the English 2500 men. France was now deprived of her ablest minister by the death of cardinal Fleury, who was succeeded by cardinal Tencin, a man of a proud, turbulent, and enterprising disposition. The former was always a friend to pacific measures, and has been accused of having neglected the military glory of France, and permitted her naval power to be almost annihilated. In 1744, commodore Anson returned from his expedition round the world. In September, 1740, he had sailed with a small squadron to the South Sea, in order to annoy the Spanish settlements of Chili and Peru. Two of his large ships, having been separated from him in a storm before he weathered Cape Horn, had put in at Rio de Janeiro, on the coast of Brazil, from whence they returned to Europe. Mr. Anson having undergone a dreadful tempest, which dispersed his fleet, arrived at the island of Juan Fernandez, where he was joined by the Gloucester, a ship of the line, a sloop, and a pink loaded with provisions. These were the remains of his squadron. He made prize of several vessels; took and burned the little town of Payta; set sail from the coast of Mexico for the Philippine isles; and in this passage the Gloucester was abandoned and sunk: the other vessels had been destroyed for want of men to navigate them; so that nothing now remained but the commodore's own ship, the Centurion, and that but very indifferently manned, for the crews had been horribly thinned by sickness. Incredible were the hardships and misery they sustained from the shattered condition of the ships, and the scorbutic disorder, when they reached the plentiful island of Tinian, where they were supplied with the necessary refreshments. Thence they prosecuted their voyage to the river of Canton in China, where the commodore ordered the ship to be sheathed, and found means to procure a reinforcement of sailors. The chief object of his attention was the rich annual ship that sails between Acapulco and Mexico and Manila, one of the Philippine islands. In hope of intercepting her, he set sail from Canton, and steered his course back to the straits of Manila, where she actually fell into his hands after a short but vigorous engagement. The prize was called Nuestra Signora de Cabadonga, mounted with 40 guns, manned with 600 sailors, and loaded with treasure and effects to the value of 313,000 pounds sterling; with this windfall he returned to Canton; from whence he proceeded to the Cape of Good Hope, and prosecuted his voyage to England, where he arrived in safety. Meanwhile the French went on with vigour in every quarter; they opposed prince Charles of Lorrain; they interrupted his progress in his attempts to pass the Rhine, and gained some successes in Italy; but their chief expectations were placed in a projected invasion of England. An invasion therefore was actually projected. Charles, son of the old Chevalier St. George departed from Rome in the disguise of a Spanish courier, prosecuting his journey to Paris, and had an audience of the French king. The troops designed for this expedition amounted to 15,000; preparations were made for embarking them at Dunkirk, and some other of the nearest ports to England, under the eye of the young pretender, and 7000 of the number actually went on board. The duke de Roquefeuille, with 20 ships of the line, was to see them landed safely in England; and count Saxe was to command them, when put ashore. The whole project, however, was disconcerted by the appearance of Sir John Norris with a superior fleet making up against them; the French fleet was obliged to put back, and a very hard gale of wind damaged their transports beyond redress. All hopes of invasion were now frustrated; and, at length, the French thought fit openly to declare war. But though fortune seemed to favour England on this occasion, yet on others she was not equally propitious. The combined fleets of France and Spain for some time fought the British armament, under admirals Matthews and Lestock, though with inferior force, and came off nearly upon equal terms. Such a parity of success in England was regarded as a defeat. Both the English admirals were tried by a court-martial; Matthews, who had fought the enemy with intrepidity, was declared incapable of serving for the future in his majesty's navy; Lestock, who had kept aloof, was acquitted with honour; for he had entrenched himself within the punctilios of discipline; he barely did his duty; a man of honour, when his country is at stake, should do more. The proceedings in the Netherlands were still more unfavourable. The French besieged and took Fribourg, before they went into winter quarters; and early the next campaign invested the city of Tournay. The allies were resolved to prevent the loss of this city by a battle. Their army was inferior, and they were commanded by the duke of Cumberland. Notwithstanding these disadvantages, they marched towards the enemy, and took post in sight of the French, who were encamped on an eminence; the village of Antoine on the right, a wood on their left, and the town of Fontenoy before them. This advantageous disposition did not repress the ardour of the English; on the 30th day of April, the duke of Cumberland marched to the attack at two o'clock in the morning. The British infantry pressed forward, bore down all opposition, and for near an hour were victorious. Marshal Saxe was at that time sick of the same disorder of which he afterwards died. He visited all the posts in a litter; and saw, notwithstanding all appearances, that the day was his own. The English column, without command, by a mere mechanical courage, had advanced upon the enemy's lines, which formed an avenue on each side to receive them. The French artillery began to play upon this forlorn body; and though they continued a long time unshaken, they were obliged to retreat about three o'clock in the afternoon. This was one of the most bloody battles that had been fought this age; the allies sustained a loss of near 12,000 men, among whom were lieutenant-general Sir James Campbell, major-general Pon-

sonby, the colonels Carpenter and Douglas, lieutenant colonel Gee, and a great number of other officers. The victory cost the French an equal, if not a greater number of lives. The duke de Gramont and three other lieutenant-generals, four major-generals, and three brigadiers, were slain. Among the wounded were two lieutenant generals, three major-generals, and thirty-six brigadiers and colonels; and but few of these long survived. This blow, by which Tournay was taken, gave the French a manifest superiority all the rest of the campaign, which they did not forego during the continuance of the war. The intended French invasion had roused all the attention of the English ministry, and nothing but loyalty breathed throughout the whole kingdom. The admirals Rowley and Warren had retrieved the honour of the British flag, and made several rich captures. Louisburg, in the island of Cape Breton, in North America, a place of great consequence to the British commerce, surrendered to general Pepperel; while, a short time after, two French East-India ships, and another from Peru laden with treasure, supposing the place still in possession of the French, sailed into the harbour, and their capture added to the English success. It was in this period of universal satisfaction, that the son of the old pretender resolved to make an effort at gaining the British crown. Being furnished with some money, and still larger promises, from France, he embarked for Scotland on board a small frigate, accompanied by the marquis of Tullibardine, Sir Thomas Sheridan, and a few other desperate adventurers. For the conquest of the whole British empire, he brought with him seven officers, and arms for 2100 men. Fortune, which ever persecuted his family, seemed no way more favourable to him: his convoy, a ship of 60 guns, was so disabled in an engagement with an English man of war, called the Lion, that it returned to Brest, while he was obliged to continue his course to the western parts of Scotland; and, landing on the coast of Lochabar, July 27, was in a little time joined by some chiefs of the Highland clans and their vassals. By means of these chiefs, therefore, he soon saw himself at the head of 1500 men; and invited others to join him by his manifestos, which were dispersed throughout all the Highlands. The ministry was no sooner confirmed of the truth of his arrival, which at first they could scarcely be induced to believe, than Sir John Cope was ordered to oppose his progress. In the mean time, the young adventurer marched to Perth, where the unnecessary ceremony was performed of proclaiming the Chevalier de St. George, his father, king of Great Britain. The rebel army descending from the mountains, seemed to gather as it went. They advanced towards Edinburgh, which they entered without opposition. Here too, the pageantry of proclamation was performed, August 17, in which he promised to dissolve the Union, and redress the grievances of the country. But, though he was master of the capital, yet the citadel, which goes by the name of the Castle, a strong fortress built upon a rock, and commanded by general Guest, braved all his attempts. In the mean time Sir John Cope, who had pursued them to the Highlands, but declined meeting them in their descent, now reinforced by two regiments of dragoons, resolved to march towards Edinburgh, and give them battle. The young adventurer, unwilling to give him time to retreat, attacked him near Preston-Pans, about twelve miles from the capital, and, in a few minutes, put him and his troops totally to the rout. This victory, in which the king lost about 500 men, gave the rebels great influence; and had the pretender taken advantage of the general consternation, and marched towards England, the consequence might have been dangerous to the safety of the state; but he spent the time at Edinburgh, seeming to enjoy the useless parade of royalty, pleased at being addressed and treated as a king. By this time he was joined by the earl of Kilmarnock, the lords Elcho, Balmerino, Ogilvy, Pitsligo, and the eldest son of the lord Lovat. While the young pretender thus trifled away the time at Edinburgh, (for all delays in dangerous enterprises are even worse than defeats) the ministry of Great Britain took every possible measure to defeat his intentions. Six thousand Dutch troops, that had come over to the assistance of the crown, were sent northward, under the command of general Wade; but, as it was then said, these could lend no assistance, as they were, properly speaking, prisoners of France, and upon their parole not to oppose that power for the space of one year. However this be, the duke of Cumberland soon after arrived from Flanders, and was followed by another detachment of dragoons and infantry; volunteers in different parts of the kingdom employed themselves in the exercise of arms; and every county exerted a generous spirit of indignation, both against the ambition, the religion, and the allies, of the young adventurer. In the mean time, Charles went forward with vigour; and, resolving to make an irruption into England, he entered it by the western border. On the 6th day of November Carlisle was invested, and in less than three days it surrendered. Here he found a considerable quantity of arms, and was declared king of Great Britain. General Wade, being apprised of his progress, advanced across the country from the opposite shore; but receiving intelligence that the enemy were two days' march before him, he retired to his former station. The young pretender now resolved to proceed, having received assurances from France, that a considerable body of troops would be landed on the southern coast of Britain, to make a diversion in his favour, and flattered with the hopes of being joined by a large body of English malecontents, as soon as he should make his appearance among them. Leaving therefore a small garrison in Carlisle, which he should rather have left defenceless, he advanced to Penrith, marching on foot in an Highland garb, and continued his irruption till he came to Manchester, where he established his head-quarters. He was here joined by about 200 Englishmen, who were formed into a regiment, under the command of colonel Townley. From thence he prosecuted his route to Derby, intending to go by the way of Chester into Wales, where he hoped for a great number of adherents. He was by this time advanced within 100 miles of the capital, which was filled with terror and confusion. The king resolved to take the field in person. The volunteers of the city were incorporated into a regiment. The practitioners of the law agreed to take the field, with the judges at their head. Even the managers of the theatres offered to raise a body of their dependants for the service of their country. Yet these combinations only served as instances of the national terror; for the trading part of the city, and those concerned in the money corporations, were overwhelmed with dejection. They could hope for little safety in the courage or discipline of a militia; especially as they every hour dreaded an invasion from France, and an insurrection of the Roman Catholics, and other friends to the expelled family. This therefore was the moment for the advancement of the adventurer's enterprise. Had he marched up to the capital, he would undoubtedly have been joined by several secretly attached to his cause. But he determined once more to retreat to Scotland; and thus his scheme was defeated. In fact, he was but nominally the leader of his forces. His generals, the chiefs of Highland clans, were, from their education, ignorant, and, from their independency, obstinate. They each embraced peculiar systems, and began to contend with each other for the preeminence; so that after violent disputes, they resolved to march back. They effected their retreat to Carlisle without any loss; and from thence crossed the rivers Eden and Solway into Scotland. In this irruption, however, they preserved all the rules of war; they desisted, in a great measure, from rapine; levied contributions; and, in the usual form, left a garrison at Carlisle at their retreat; which, a short time after, to the number of 400, surrendered to the duke of Cumberland prisoners at discretion. The pretender being returned to Scotland, proceeded to Glasgow; from which city he exacted severe contributions. Advancing to Stirling, he was joined by lord Lewis Gordon, at the head of some forces which had been assembled in his absence

Other clans, to the number of two thousand, came in likewise; Spain sent him some supplies of money; and, in one or two skirmishes with the royalists, his generals came off with victory; so that his affairs once more seemed to wear an aspect of success. Being joined by lord John Drummond, he invested the castle of Stirling, commanded by general Blakeney; but his forces, being unused to sieges, consumed much time to no purpose. General Hawley, who commanded a considerable body of forces near Edinburgh, undertook to raise the siege. He advanced towards the rebel army, and rendezvoused his whole forces at Falkirk, while the rebels lay encamped at no great distance. After two days mutually examining each other's strength, the rebels, on the 17th day of January, came on in full spirits to attack the king's army. The pretender, who stood in the front line, gave the signal to fire; and the first volley served to put Hawley's forces into confusion. The horse retreated with precipitation, and fell in upon their own infantry; the rebels followed their blow; and the greatest part of the royal army fled with the utmost precipitation. They retired in confusion to Edinburgh, leaving the field of battle, with part of their tents and artillery, to the rebels. This was the end of all their triumphs. But a new scene of conduct was now going to open; for the duke of Cumberland, at that time the favourite of the English army, had put himself at the head of the troops at Edinburgh, which consisted of about fourteen thousand men. He resolved therefore to come to a battle as soon as possible; and marched forward, while the young adventurer retired at his approach. The duke advanced to Aberdeen, where he was joined by the duke of Gordon, and some other lords, attached to his family and cause. After having refreshed his troops there for some time, he renewed his march; and in twelve days came upon
1746 the banks of the deep and rapid river Spey. This was a place where the rebels might have disputed his passage; but they seemed now totally void of all counsel and subordination, without conduct, and without expectation. The duke still proceeded in his pursuit; and, at length, had advice that the enemy had advanced from Inverness to the plain of Culloden, which was about nine miles distant, and there intended to give him battle. On
April 5 this plain the Highlanders were drawn up in order of battle, to the number of eight thousand men, in thirteen divisions, supplied with pieces of artillery. The battle began about one o'clock in the afternoon; the cannon of the king's army did dreadful execution among the enemy; while theirs, being but ill served, was ineffectual. One of the great errors in all the pretender's warlike measures, was his subjecting undisciplined troops to the forms of artful war, and thus repressing their native ferocity, from which alone he could hope for success. After they had stood the English fire for some time, they at length became impatient for closer engagement; and about five hundred of them attacked the English left wing with their accustomed fierceness. The first line being disordered by this onset, two battalions advanced to support it, and galled the enemy by a terrible and close discharge. At the same time the dragoons, under Hawley, and the Argyleshire militia, pulling down a park-wall that guarded the enemy's flank, and which the rebels had left but feebly defended, fell in among them sword in hand, with great slaughter. In less than thirty minutes they were totally routed, and the field covered with their wounded and slain, to the number of about three thousand men. The duke, immediately after the decisive action at Culloden, ordered six and thirty deserters to be executed; the conquerors spread terror wherever they came; and, after a short time, the whole country round was one scene of slaughter, desolation, and plunder; justice seemed forgotten, and vengeance assumed the name. In the mean time, the unhappy fugitive adventurer wandered from mountain to mountain, a wretched spectator of all these horrors, the result of his ill-guided ambition. He now underwent a similarity of adventures with Charles II. after the defeat at Worcester. He sometimes found refuge in caves and cottages, without attendants, and exposed to the mercy of peasants, who could pity but not support him. Sometimes he lay in forests, with one or two companions of his distress, continually pursued by the troops of the conqueror, as there were thirty thousand pounds bid for his head. Sheridan, an Irish adventurer, was he who kept most faithfully by him, and inspired him with courage to support such incredible hardships. He was obliged to trust his life to the fidelity of above fifty individuals. One day, having walked from morning till night, pressed by hunger, and worn by fatigue, he ventured to enter a house, the owner of which he well knew was attached to the opposite party: "The son of your king," said he, entering, "comes to beg a bit of bread and clothes. I know your present attachment to my adversaries, but I believe you have sufficient honour not to abuse my confidence, or to take the advantage of my misfortunes. Take these rags, that have for some time been my only covering, and keep them. You may, probably, restore them to me one day, when seated on the throne of the kings of Great Britain." His host was touched with his distress, assisted him as far as he was able, and never divulged his secret. In this manner he wandered among the frightful wilds of Glengary, for near six months, often hemmed round by his pursuers, but still finding some expedient to save him from captivity and death. At length, a privateer of St Malo, hired by his adherents, arrived in Lochnanach, in which he embarked, and arrived at France in safety. While the prince thus led a wandering and solitary life, the scaffolds and the gibbets were bathed with the blood of his adherents; seventeen officers of the rebel army were executed at Kennington common, in the neighbourhood of London, whose constancy in death gained more proselytes to their cause than perhaps their victories could have done. Nine were executed at Carlisle; six at Brumpton; seven at Penrith; and eleven at York. A few obtained pardons; and a considerable number were transported to the plantations. The earls of Kilmarnock and Cromartie, with the lord Balmerino, were tried by their peers, and found guilty. Cromartie was pardoned; the other two were beheaded on Tower-hill. Kilmarnock, either from conviction, or from the hope of pardon, owned his crime, and declared his repentance of it. On the other hand, Balmerino, who had from his youth up been bred to arms, died in a more daring manner. When his fellow-sufferer, as commanded, bid God bless king George, Balmerino still held fast to his principles, and cried out, God bless king James, and suffered with the utmost intrepidity. Lord Lovat, and Mr. Radcliff, the titular earl of Derwentwater, suffered the same fate with equal resolution. The flames of war still continued to rage upon the continent with their accustomed violence. The French went forward with rapid success, having reduced almost the whole Netherlands to their obedience. In vain the Dutch negociated, supplicated, and evaded war; they saw themselves stripped of all those strong towns which defended their dominions from invasion; and they now lay almost defenceless, ready to receive terms from their conquerors. The people, in several towns, inflamed almost to tumult and sedition, compelled their magistrates to declare for the prince of Orange as Stadtholder, captain-general, and admiral of the United Provinces. The vigorous consequences of this resolution immediately appeared; all commerce with the French was prohibited; the Dutch army was augmented; and orders were issued to commence hostilities against the French by sea and
1747 land. About this time the English made an unsuccessful expedition into France, in order to attack Port l'Orient, in which they came off without any honour. The French gained a considerable victory at Rouceroux, in Flanders, over the allies, although it procured them no real advantage; and it cost them a greater number of lives than those whom they obliged to retire. The Dutch, in this general conflict, seemed the greatest losers. A victory gained over the allies at La Feldt served to reduce them to a still greater degree of distrust of their generals, than they had hitherto shewn; but the taking of Bergen-op-Zoom, the strongest

fortification of Dutch Brabant, and which put the French in possession of the whole navigation of the Scheldt, threw them almost into despair. But these victories in favour of France were counterbalanced with almost equal disappointments. In Italy, the French general, marshal Belleisle's brother, at the head of thirty-four thousand men, attempted to penetrate into Piedmont; but his troops were put to the rout, and he himself slain. The French king equipped an unsuccessful armament for the recovery of Cape Breton; and, not discouraged by this failure, fitted out two squadrons, one to make a descent upon the British colonies in America, and
1747 the other to assist the operations in the East Indies. These, however, were attacked by Anson and Warren, and nine of their ships were taken. Soon after this, commodore Fox, with six ships of war, took above forty French ships laden from St. Domingo; and this loss was soon after followed by another defeat, which the French fleet sustained from admiral Hawke, in which seven ships of the line and several frigates were taken. This variety of success served to make all the powers at war heartily desirous of peace. An accommodation was therefore resolved upon; and the contending powers agreed to come to a congress at Aix la-Chapelle, where the earl of Sandwich and Sir Thomas Robinson assisted as plenipotentiaries from the king of Great Britain. This treaty, which takes its name from that city, was concluded on the 7th day of October, a lasting instance of precipitate counsels and English humility. In 1749 a misunderstanding began to break out afresh between his majesty and the prince of Wales, whose servants, with a few independent country gentlemen, now began to form a new opposition in the house of commons. When the parliament met, they objected to and disputed the address, as well as every other measure proposed by the ministry. The colony of Nova Scotia was now planted; which, however, neither answered the expectations of the public or its projectors, and which in some measure proved the origin of the war that broke out in 1755. There were great party-riots at this time, particularly at Litchfield races, where the duke of Bedford was grossly assaulted. In 1750, Mr. Pelham planned and executed a scheme for lightening the immense load of the national debt. This year the attention of the public was very much engrossed by the Westminster election, in which lord Trentham and Sir George Vandeput were competitors. The month of February was rendered remarkable by two shocks of an earthquake that were very sensibly felt in the cities of London and Westminster, and their environs. The month of May was distinguished by a pestilential fever that arose from a contagion among the prisoners tried at the Old Bailey, and which proved fatal to the lord mayor of London, one alderman, two judges, several lawyers, and a considerable number of spectators that attended the sessions. Disputes first began to arise this year between the courts of England and France respecting the limits of Nova Scotia. On the 20th of March, 1751, Frederic prince of Wales died of a pleuretic disorder, in the 45th year of his age. He was possessed of every amiable quality which could engage the affection of the people; a tender and obliging husband, a fond parent, a kind master, liberal, generous, candid, and humane; a munificent patron of the arts; an unwearied friend to merit; well disposed to assert the rights of mankind in general, and warmly attached to the interest of Great Britain. His royal highness left issue, 1. Augusta, born August 11, 1737, married to the hereditary prince of Brunswick, January 16, 1764. 2. His present majesty, born May 24, 1738, old style. 3. Edward, duke of York, born March 14, 1739; died on September 17, 1767. 4. Elizabeth Caroline, born in December, 1740; died Sept. 4, 1759. 5. William Henry, duke of Gloucester, born Nov. 25, 1743; married to the countess of Waldegrave, natural daughter of Sir E. Walpole, K. B; died Aug. 25, 1805. 6. Henry Frederic, duke of Cumberland, born Nov. 7, 1745, married in Nov. 1771, to the widow Horton, a daughter of lord Irnham; died Sept 1790. 7. Louisa Anne, born March 8, 1749; since dead. 8. Frederic William, born May 13, 1750; and died Dec. 31, 1765. 9. Caroline Matilda, born July 11, 1751, old style; married, Oct. 1, 1766, to Christian VII. king of Denmark, from whom she was repudiated in 1772, and died in 1775. The prince of Orange also died in October, in the 41st year of his age. In May an act passed for regulating the commencement of the year, by which the old style was abolished, and the new style established. This was done by sinking eleven days in Sept. 1752, and thereafter beginning the year on the first of January. The scrutiny relative to lord Trentham and Sir George Vandeput had been carried on with infinite acrimony, when, at last, the former took his seat in parliament. Mr. Crosle, one of Sir George's counsel, was forced to ask pardon on his knees of the house of commons; which Mr. Murray, brother to lord Elibank, refusing to do, was committed close prisoner to Newgate. This year, Miss Blandy, for poisoning her father, and Miss Jefferies, with one Swan, for murdering her uncle, were executed. In 1753 passed the two famous bills for naturalizing the Jews, and for preventing clandestine marriages; the former, however, was afterwards repealed. This year too was rendered remarkable by the romantic affair of Elizabeth Canning, a wench who pretended that on new-year's day she had been seized by two men, under Bedlam-Wall, who tore off her clothes, gagged her, and carried her to Enfield Wash; where (twas wildly affirmed) she had subsisted almost a month on only a quartern loaf. On this occasion one Mary Squires, a gipsey, was tried, and sentenced to die, but afterwards reprieved, to the great joy of all persons of sense and humanity; and Canning being tried for perjury, was transported for life in 1754. The society for the encouragement of arts, manufactures, and commerce, was founded about this time. In 1754, the public of England sustained a great loss in the death of Mr. Pelham, who was succeeded as prime minister by his brother the duke of Newcastle. About this time intelligence arrived which excited the most vivid emotions of grief and compassion amongst all ranks throughout the nation. On the first of November, 1755, two tremendous shocks of an earthquake almost destroyed the city of Lisbon; they continued for near a quarter of an hour, and were immediately followed by a most extraordinary rise and inundation of the Tagus. In the space of a few minutes, a vast number of churches, monasteries, and many thousand private houses, were thrown to the ground. It was computed that ten thousand of the inhabitants were killed by the fall of the buildings, or swallowed up in the chasms formed by the numerous and horrid partings of the earth. The parliament of Great Britain generously voted the sum of one hundred thousand pounds for the use of the distressed inhabitants of that metropolis. "Amidst the millions expended for the purposes of devastation and destruction," says a modern writer, "a vote of this description seems as a paradise blooming in the wild." The barefaced encroachments of the French, who had built forts on our back settlements in America, and the dispositions they made for sending over vast bodies of veteran troops to support those encroachments, produced a wonderful spirit in England, especially after admiral Boscawen was ordered with 11 ships of the line, besides a frigate and two regiments, to sail to the banks of Newfoundland, where he came up with and took two French men of war, the rest of their fleet escaping up the river St. Lawrence, by the straits of Belleisle. No sooner was it known that hostilities were begun, than the public of England poured their money into the government's loan; and orders were issued for making general reprisals in Europe as well as in America, and that all the French ships, whether outward or homeward bound, should be stopped and brought into British ports. These orders were so effectual, that, before the end of the year 1755, above 300 of the richest French merchant ships, and above 8000 of their best sailors, were brought into British ports. This well-timed measure had such an effect, that the French had neither hands to navigate their merchantmen, nor to man their ships of war; for about two years after near 30,000 French

seamen were found to be prisoners in England. In July, general Braddock, who had been injudiciously sent from England to attack the French and reduce the forts on the Ohio, was defeated and killed by falling into an ambuscade of the French and Indians near Fort du Quesne; but major general Johnson defeated a body of French near Crown Point, of whom he killed about 1000. On the 18th of May, 1756, Great Britain declared war solemnly against France. The English at this time could not be said to have any first minister; some great men agreed in nothing but in opposing the measures of the cabinet. The English navy in 1755 consisted of one ship of 110 guns, five of 100 guns each, thirteen of 90, eight of 80, five of 74, twenty-nine of 70, four of 66, one of 64, thirty-three of 60, three of 54, twenty-eight of 50, four of 44, thirty-five of 40, and forty-two of 20, four sloops of war of 18 guns each, two of 16, eleven of 14, thirteen of 12, and one of ten, besides a great number of bombketches, fire-ships, and tenders; a force sufficient to oppose the united maritime strength of all the powers of Europe; whilst that of the French, even at the end of this year, and including the ships then upon the stocks, amounted to no more than six ships of 80 guns, twenty-one of 74, one of 72, four of 70, thirty-one of 64, two of 60, six of 50, and thirty-two frigates. In proportion as the spirits of the public were elevated by those invincible armaments, they were sunk with an account that the French had landed 11,000 men in Minorca, to attack Fort St. Philip there; that admiral Byng, who had been sent out with a squadron, at least equal to that of the French, had been baffled if not defeated by their admiral Galissioniere; and that at last Minorca was surrendered by general Blakeney. The English were far more alarmed than they ought to have been at those events. The loss of Minorca was more shameful than detrimental to the kingdom; but the public outcry was such, that the king gave up Byng to public justice, and he was shot to death at Portsmouth for cowardice. It was about this time that Mr. Pitt was placed, as secretary of state, at the head of the administration. He had been long known to be a bold speaker, and he soon proved himself to be as spirited a minister. The miscarriages in the Mediterranean had no consequence but the loss of Fort St. Philip, which was more than repaired by the vast success of the English privateers both in Europe and America. The successes of the English in the East Indies, under colonel Clive, are almost incredible. He defeated Suraja Dowla, nabob of Bengal, Bahar, and Orixa, and placed Jaffier Ally Cawn in the antient seat of the new nabobs of those provinces. Suraja Dowla, who was in the French interest, was, a few days after his being defeated, taken by the new nabob, Jaffier Ally Cawn's son, and put to death. This event laid the foundation of the present amazing extent of riches and territory which the English now possess in the East Indies. Mr. Pitt introduced into the cabinet a new system of operations against France, than which nothing could be better calculated to restore the spirits of his countrymen, and alarm their enemies. Far from dreading an invasion, he planned an expedition for carrying the arms of England into France itself, and the descent was to be made at Rochfort, under general Sir John Mordannt, who was to command the land troops. Nothing could be more promising than the dispositions for this expedition. It sailed on the 8th of September, 1757, and admiral Hawke brought both the sea and land forces back on the 6th of October to St. Helen's, without the general making an attempt to land on the coast of France. He was tried and acquitted without the public murmuring, so great an opinion had the people of the minister, who, to do him justice, did not suffer a man or ship belonging to the English army or navy to lie idle. Jan. 6, 1757, the French king was stabbed in his side, as he was getting into his coach, by one Damien, whose impious attempt was punished with the most cruel and exquisite tortures. The French having attacked the electorate of Hanover with a most powerful army, merely because his Britannic majesty refused to wink at their encroachments in America, the English parliament, in gratitude, voted large supplies of men and money in defence of the electoral dominions. The duke of Cumberland had been sent thither to command an army of observation; but he had been so powerfully pressed by a superior army, that he found himself obliged to lay down his arms; and the French, under the duke of Richlieu, took possession of that electorate, and its capital. At this time a scarcity next to a famine raged in England; and the Hessian troops, who, with the Hanoverians, had been sent to defend the kingdom from an invasion intended by the French, remained still in England. So many difficulties concurring, in 1758 a treaty of mutual defence was agreed to between his majesty and the king of Prussia: in consequence of which the parliament voted 670,000*l.* to his Prussian majesty; and also voted large sums, amounting in the whole to near two millions a year, for the payment of 50,000 of the troops of Hanover, Hesse-Cassel, Saxe-Gotha, Wolfenbuttel, and Buckeburg. This treaty, which proved afterwards so burdensome to England, was intended to unite the protestant interest in Germany. George II. with the consent of his Prussian majesty, pretenting that the French had violated the convention concluded between them and the duke of Cumberland at Closterseven, ordered his Hanoverian subjects to resume their arms under Prince Ferdinand of Brunswick, a Prussian general, who instantly drove them out of Hanover; and the duke of Marlborough, after the English had repeatedly insulted the French coasts, by destroying their stores and shipping at St. Maloes and Cherburg, marched into Germany, and joined prince Ferdinand with 12,000 British troops, which were afterwards increased to 25,000. A sharp war ensued. The English every where performed wonders, and, according to the accounts in the London Gazette, they were every where victorious; but nothing decisive followed, and the enemy opened every campaign with advantage. Even the battle of Minden, the most glorious, perhaps, in the English annals, in which about 7000 English defeated 80,000 French regular troops in fair battle, contributed nothing to the conclusion of the war, or towards weakening the French in Germany. The English bore the expence of the war with cheerfulness, and applauded Mr Pitt's administration, because their glorious successes in every other part of the globe demonstrated that he was in earnest. Admiral Boscawen and general Amherst, in August 1758, reduced and demolished Louisbourg, in N. America, which had been restored to the French by the treaty of Aix-la-Chapelle, and took 5 or 6 French ships of the line. Frontenac and Fort du Quesne, in the same quarter, fell also into the hands of the English; acquisitions that far overbalanced a check which the English received at Ticonderago, and the loss of about 300 of the English guards at St. Cas, as they were returning under general Bligh from the coast of France. The English affairs in the East Indies this year proved equally fortunate. The lords of the admiralty received letters from thence, with an account of admiral Pocock engaging the French fleet near Fort St. David's, March 29, in which engagement a French man of war, called the Bien Aimé, of 74 guns, was so much damaged, that they run her on shore; the French had 600 killed and wounded on this occasion, and the English only 29 killed and 89 wounded; that on August 3d following, he engaged the French fleet a second time, near Pondicherry; when, after a brisk firing of ten minutes, the French bore away with all the sail they could make, and got safe into the road of Pondicherry; the loss of the French in this engagement was 540 killed and wounded, and that of the English only 147; and that, on December 14th following, general Lally, commande of the French army in those parts, marched to besiege Madras, which was defended by the English colonels Laurence and Draper; and after a brisk cannonade, which lasted till February 16th following, the English having received a reinforcement of 600 men, general Lally thought proper to raise the siege, and retire with precipitation, leaving behind him 40 pieces of cannon. The year 1759 was introduced by the

taking of the island of Goree, on the coast of Africa, by commodore Keppel. Three capital expeditions had been planned for this year in America, and all of them proved successful. One of them was against the French islands in the West Indies, where Guadalope was reduced. The second expedition was against Quebec, the capital of French Canada. The command was given, by the minister's advice, to general Wolfe, a young officer of a truly military genius. Wolfe was opposed with far superior forces by Montcalm, the best and most successful general the French had. Though the situation of the country which Wolfe was to attack, and the works the French threw up to prevent a descent of the English, were deemed impregnable, yet Montcalm never relaxed in vigilance. Wolfe's courage and perseverance, however, surmounting incredible difficulties, he gained the heights of Abraham, near Quebec, where he fought and defeated the French army, but was himself killed; and general Monckton, who was next in command, being wounded, the completion of the French defeat, and the glory of reducing Quebec, was reserved for brigadier-general (now lord viscount) Townshend. General Amherst, who was the first English general on command in America, conducted the third expedition. His orders were to reduce all Canada, and to join the army under general Wolfe on the banks of the river St. Lawrence. It is to the honour of the minister, that Mr. Amherst in this expedition was so well provided with every thing that could make it succesful, that there scarcely appeared any chance for its miscarriage; and thus the French empire in North America became subject to Great Britain. The affairs of the French being now desperate, and their credit ruined, they resolved upon an attempt to retrieve all by an invasion of Great Britain; but on the 18th of August, 1759, admiral Boscawen attacked the Toulon squadron, commanded by M. de la Clue, near the straits of Gibraltar, took Le Centaur of 74, Le Temeraire of 74, and Le Modeste of 74 guns, and burnt L'Ocean of 80, and Le Redoubtable of 74 guns. The rest of the fleet, consisting of seven ships of the line, and three frigates, made their escape in the night. And on November 20, Sir Edward Hawke defeated the Brest fleet, commanded by admiral Conflans, off the island of Dumet, in the Bay of Biscay. The Formidable, a French man of war of 80 guns, was taken; the Thesée of 74, and the Superbe of 70 guns, were sunk; and the Soleil Royal of 80, and the Heros of 74 guns, were burnt. Seven or eight French men of war of the line got up the river Villaine, by throwing their guns overboard; and the rest of the fleet, consisting of five ships of the line and three frigates, escaped in the night. The English lost on this occasion, upon the shoals of the coasts the Essex of 64, and the Resolution of 74 guns. After this engagement the French gave over all thoughts of their intended invasion of Great Britain. In Feb. 1760, captain Thurot, a French marine adventurer, who had, with three sloops of war, alarmed the coasts of Scotland, and actually made a descent at Carrickfergus, in Ireland, was, on his return, met, defeated, and killed, by captain Elliot, who was the commodore of three ships, inferior in force to the Frenchman's squadron. Every day's gazette added to the accounts of the successes of the English, and the utter ruin of the French finances, which that government did not blush publicly to avow. In short, Great Britain now reigned as the sole mistress of the main, and had succeeded in every measure that had been projected for her own safety and advantage. The war in Germany, however, continued still as undecisive as it was expensive, and many in England began to consider it now as foreign to the internal interests of Great Britain. The French again and again shewed dispositions for treating, and the charges of the war, which now amounted to little less than 18,000,000£ sterling yearly, inclined the British ministry to listen to their proposals. A negociation was accordingly entered upon, which proved abortive, as did many other projects for accommodation. On May 5, earl Ferrers was executed at Tyburn for the murder of Mr. Johnson his steward; and on the 25th of October, 1760, George II. died suddenly, full of years and glory, in the 77th year of his age, and 33d of his reign. By his consort Wilhelmina Caroline, (daughter of John Frederick, marquis of Brandenburgh-Anspach,) to whom he was married on Sept. 2, 1705, he had the following issue; 1 Frederick Lewis prince of Wales, &c. &c. born at Hanover, January 20, 1706-7, and died March 20, 1750-1. 2. Anne, late princess of Orange, mother of the present princess of Nassau-Weilburgh, who was married to his most serene highness Charles William, prince of Orange, March 14, 1734, and died January 12, 1759. 3. Amelia Sophia Eleonora, born May 30, 1711, and died October 31, 1786. 4. Elizabeth Caroline, born May 30, 1713, and died December 18, 1728. 5. William Augustus, duke of Cumberland, born April 15, 1721, and died October 31, 1765. 6. Mary, born February 22, 1722-3, married May 8, 1740, to Charles, prince of Hesse-Cassel, by whom she had issue, William, the hereditary prince, married to his cousin, the princess Sophia Magdalena, princess of Denmark; Charles and Frederick. She died Jan. 12, 1759. 7. Louisa, born Dec. 27, 1724, and in Nov. 1743, married to the prince royal, afterwards king of Denmark, by whom she was the mother of the late king, Christian VII. and the princesses Sophia Magdelena (abovementioned) Wilhelmina Caroline, and Louisa. She died December 8, 1751. The powers of the human mind were freely and fully exercised in this reign. Considerable progress was made in the mathematics and astronomy by Saunderson, Bradley, Maclaurin, Smith, and the two Simsons; among the clergy, Sherlock, Hoadley, Secker, Conybeare, and Warburton, Foster, and Leland, were equally distinguished for their genius and erudition. Some curious discoveries in anatomy were made by the ingenuity and dexterity of Hunter and Munro; and surgery was brought to great perfection under the auspices of Cheselden and Sharpe. Among the literati, Young still survived, a venerable monument of poetical talent. Thomson, the poet of the Seasons, displayed a luxuriancy of genius in describing the beauties of nature. Akenside and Armstrong excelled in didactic poetry. Even the Epopœa did not disdain an English dress, but appeared to advantage in the Leonidas of Glover, and the Epigoniad of Wilkie. The public acknowledged a considerable share of dramatic merit in the tragedies of Young, Mallet. Home, and some other less distinguished authors. The exhibitions of the stage were improved to the most exquisite entertainment by the talents and management of Garrick, who greatly surpassed all his predecessors of this and perhaps every other nation, in his genius for acting; in the sweetness and variety of his tones; the irresistible magic of his eye; the fire and vivacity of his action; the elegance of attitude; and the whole pathos of expression. That Great Britain was not barren of poets at this period, appears from detached performances of Johnson, Mason, Gray, the two Whiteheads, and the two Wartons, besides a great number of other bards, who have sported in lyric poetry, and acquired the applause of their fellow-citizens. Even the female sex distinguished themselves by their taste and ingenuity. Miss Carter rivalled the celebrated Dacier in learning and critical knowledge; and Mrs. Lennox signalized herself by many successful efforts of genius, both in poetry and prose. Johnson, inferior to none in philosophy, philology, poetry, and classical learning, stands foremost as an essayist, justly admired for the dignity, strength, and variety of his style, as well as for the agreeable manner in which he investigates the human heart, tracing every interesting emotion, and opening all the sources of morality. England was not defective in other arts that embellish and amuse. Music became a fashionable study, and its professors generally caressed by the public. Among the few natives of England who distinguished themselves by their talents in this art, Green, Howard, Arne, and Boyce, were the most remarkable. The British soil, which had hitherto been barren in the article of painting, now produced some artists of extraordinary merit. Hogarth excelled all the world in exhibiting the scenes of ordinary life in humorous historical de-

signs. Hudson, Reynolds, and Ramsay, distinguished themselves by their superior merit in portraits; a branch that was successfully cultivated by many other English painters. The art of engraving was brought to perfection by Strange, and laudably practised by several other masters; and great improvements were made in mezzotinto, miniature, and enamel. Many fair monuments of sculpture or statuary were raised by Rysbrack, Roubilliac, and Wilton. Architecture, which had been cherished by the elegant taste of Burlington, soon became a favourite study, and many magnificent edifices were reared in different parts of the kingdom.

GEORGE III. eldest son of Frederic, prince of Wales, was proclaimed king of Great Britain, October 26, 1760. The brighter the national glory was at the time of George II's death, the more arduous was the province of his successor, George III. Born and bred in England, he had no prepossessions but for his native country, and an excellent education gave him true notions of its interests; therefore he was not to be imposed upon by flattering appearances. He knew that neither the finances nor the population of England could furnish men and money for supplying the necessity of the war, successful as it was; and yet he was obliged to continue it, so as to bring it to a happy period. He chose for his first ministry the earl of Bute, whom he had known ever since he began to know himself; and among the first acts of his reign was to convince the public, that the death of his predecessor should not relax the operations of the war. Accordingly, in 1761, the island of Belleisle, on the coast of France, surrendered to his majesty's ships and forces under commodore Keppel and general Hodgson; as did the important fortress of Pondicherry in the East Indies to colonel Coote and admiral Stevens. The operations against the French West Indies still continued under general Monckton, lord Rollo, and Sir James Douglass; and in 1762, the island of Martinico, hitherto deemed impregnable, with the islands of Grenada, Grenadillas, St. Vincent, and others of less note, were subdued by the British arms with inconceivable rapidity. By this time the famous family compact, among all the branches of the Bourbon family, had been concluded, and it was soon found necessary to declare war against Spain, who, having been hitherto no principals in the quarrel had scandalously abused their neutrality in favour of the French. A respectable armament was fitted out under admiral Pocock, having the earl of Albemarle on board to command the land forces; and the vitals of the Spanish monarchy were struck at by the reduction of the Havannah, the strongest and most important fort which his Catholic majesty held in the West Indies. The capture of the Hermione, a large Spanish register-ship, bound from Lima to Cadiz, the cargo of which was valued at a million sterling, preceded the birth of the prince of Wales, and the treasure passed in triumph through Westminster to the bank the very hour he was born. The loss of the Havannah, with the ships and treasures there taken from the Spaniards, was succeeded by the reduction of Manilla, in the East Indies, by general Draper and admiral Cornish, with the capture of the Trinidad, reckoned worth three millions of dollars. To counteract those dreadful blows given to the family compact, the French and Spaniards opened their last resource, which was to quarrel with and invade Portugal, which had been always under the peculiar protection of the British arms. Whether this quarrel was real or pretended, is not for me to decide. It certainly embarrassed his Britannic majesty, who was obliged to send thither armaments both by sea and land; but these found no great difficulty in checking the progress of the Spaniards. The negociations for peace were now resumed, and the necessity of concluding one was acknowledged by all his majesty's ministers and privy counsellors, excepting two. Many difficulties were surmounted; but the equally useless and expensive war in Germany was continued between the French and English with greater fury than ever. The enemy, however, at last granted such terms as the British ministry thought admissible and adequate to the occasion. A cessation of arms took place in Germany, and in all other quarters; and on the 10th of February, 1763, the definitive treaty of peace between his Britannic majesty, the king of France, and the king of Spain, was concluded at Paris, and acceded to by the king of Portugal. March 10, the ratifications were exchanged at Paris. The 22d, the peace was solemnly proclaimed at the usual places in Westminster and London; and the treaty having on the 18th been laid before the parliament, it met with the approbation of a majority of both houses. Never was the fortune of any nation higher than that of the English at this period. Besides our rich possessions in the East and West Indies, with those on the coast of Africa, all enlarged by a series of the most extraordinary success, and confirmed by a perpetual treaty, without including Hudson's Bay, Newfoundland, or the other islands of North America, we were masters of all that vast continent, which stretches from the mouth of the river St. Lawrence to that of the Mississippi, and from the Atlantic Ocean to the South Sea; the most extensive empire that ever was formed on the face of the earth. During the administration of Mr. Grenville, 1765, bills passed for laying a stamp-duty on the British colonies in America, which first laid the foundation of those quarrels between the colonies and the mother country, which ended in a total separation. This measure was no sooner known in America, than insurrections commenced there, and great murmurings at home. In consequence of which, the ministry retired, and the act was repealed. In the course of this year, the sovereignty of the Isle of Man was annexed to the crown of England; and this year, on account of the seizure of Mr. Wilkes's papers, general warrants, granted by secretaries of state, except in cases of high treason, were declared to be illegal and oppressive. In 1768, Mr. Wilkes, at the time he was an outlaw, having offered himself as a candidate to represent the city of London in parliament, and failing in that attempt, was immediately chosen for Middlesex. He was afterwards sent to the King's Bench prison, fined, and expelled the house of commons, for publishing No. 45. of the North Briton, &c. Mr. Wilkes's imprisonment expired in 1771, when he was chosen one of the sheriffs for London and Middlesex, made an alderman, had his debts paid, afterwards elected lord mayor, and lastly chamberlain of London. This year the house of commons committed the lord-mayor and alderman Oliver to the Tower, for attempting to send one of their messengers to prison. The English parliament, having laid new duties on paper, glass, tea, and other articles, in America, the colonies revolted and flew to arms. On the 19th of April, 1775, general Gage detached a party to seize some military stores at Concord, in New England. Several skirmishes ensued, many were killed on both sides, and the British troops would probably have been all cut off, had not a fresh body arrived to support them. Arms were now taken up in every quarter. The Americans assumed the title of *The United and Independent Colonies of North America.* Soon after the affair at Concord, the battle at Bunker's Hill took place, in which near 300 of the British officers and soldiers were killed. In 1776, Boston was bombarded and evacuated, when general Washington took possession of it, and general Howe removed his troops to Halifax. In 1778, the French entered into an alliance with the thirteen United Colonies. The year 1780 was remarkable for one of the most dreadful riots that ever happened in the city and suburbs of London. An association of protestant dissenters, with lord George Gordon at their head, while the nation was involved in real danger, alarmed themselves with fancied apprehensions of popery, and presented a petition, signed by 100,000 persons, to repeal an act they had just passed in favour of the Catholics. They proceeded to the house in great order, on the 2d of June, and the president gave in their petition; but, in the course of the day, several lords and commoners were insulted by the mob. In the evening, the mob pulled down the Sardinian, and another Romish chapel. On the evening of the 5th, Lord Mansfield's and several other houses were sacked; and the next day the King's Bench prison, the New Bridewell, the Fleet

prison, some popish chapels, and several papists' houses, were destroyed. Fires were seen blazing in every part of the capital, and the lawless mob were exacting contributions from the citizens, while the magistrates, and even the ministry, viewed these scenes of desolation with an inactivity that was astonishing. At length, however, their courage seemed roused, troops were called into London from all quarters, and were stationed in every part of the town. This step effectually checked the progress of the rioters; a great number of them were shot by the military, and others were taken, tried, and executed. Lord George Gordon was also tried, but acquitted. In 1782, our affairs in America began to appear desperate, and every one seemed desirous of bringing it to a conclusion, except those whose tyranny, ambition, and ignorance, had been the cause of it. In the mean time, admiral Rodney had a partial engagement with Count de Grasse, who retired to Guadaloupe to refit; but not long after, the two fleets met, and a general engagement commenced, which lasted twelve hours, when four French ships were taken, and one sunk; a fifth was taken, but blew up. Admiral Hood captured four, and admiral Barrington two ships of war, and ten sail under their convoy. The Count de Grasse was taken and brought to England; but most of the prizes, with some of our own ships, were lost, in their passage to England, in a violent storm. The Spaniards took from us the Bahama islands, and continued the siege of Gibraltar with vigorous perseverance; but all their efforts were rendered ineffectual by the bravery and conduct of general Elliot. He permitted them almost to complete their works on the land side, when he began such a heavy fire of carcasses, hot shot, and shells, that all their batteries were either damaged or destroyed. Soon after, another attack was made by ten floating batteries, built by the Spaniards at an enormous expence; but, by an incessant fire of red-hot balls from the besieged, most of them were set in flames, and great numbers of the men killed and blown up. However, all parties being now tired of the war, in 1783, the provisional articles between England and America were made public; by which it appeared that his Britannic majesty acknowledged the independence of the thirteen United States of North America. He also relinquished all claims to the government of them; and consented to treat with these people as free and independent states, who, but a little time before, were despised as unpardonable rebels. From this period to the year 1788, the time passed in political and party contentions, without producing any thing very material; but towards the close of this year, the political horizon of Great Britain was obscured by a dreadful and unexpected event. His majesty was seized with a violent disorder, which was at first thought to be a fever, from which little hopes were given of his recovery. His physicians, however, at last pronounced him out of danger, but gave the public the melancholy information of his being disordered in his senses; and public prayers were sent up to heaven for his recovery. On Sunday the 13th of July, 1788, about nine in the morning, without any eclipse, a dreadful darkness suddenly overspread several parts of France. It was the prelude of such a tempest as is unexampled in the temperate climates of Europe. Wind, rain, hail, and thunder, seemed to contend in impetuosity; but the hail was the great instrument of ruin. Instead of the rich prospects of an early autumn, the face of nature, in the space of an hour, presented the dreary aspect of universal winter. The soil was converted into a morass, the standing corn beaten into the quagmire, the vines broken to pieces, the fruit trees demolished, and unmelted hail lying in heaps like rocks of solid ice. Even the robust forest-trees were unable to withstand the fury of the tempest. The hail was composed of enormous, solid, and angular pieces of ice, some of them weighing from eight to ten ounces. The country people, beaten down in the fields on their way to church, amidst this concussion of the elements, concluded that the last day was arrived; and scarcely attempting to extricate themselves, lay despairing and half suffocated amidst the water and the mud, expecting the immediate dissolution of all things. The storm was irregular in its devastations. While several rich districts were laid entirely waste, some intermediate portions of country were comparatively little injured. One of 60 square leagues had not a single ear of corn or fruit of any kind left. Of the 65 parishes in the district of Pontoise, 43 were entirely desolated, and of the remaining 23 some lost two thirds, and others half their harvest. The isle of France, and the Orleannois, appear to have suffered chiefly. The scarcity of grain, greatly increased by this event, tended not a little to hasten those scenes of calamity which afterwards afflicted that nation. This year closed with gloomy and desponding prospects, owing to the unhappy state of the king's health, and the rage of party, which seemed ripe to hurl every thing into a state of anarchy and confusion. The year 1789 opened with violent debates in both houses of parliament, on the mode of properly proceeding to business, in order to settle the regency during the unhappy indisposition of the king. This ferment continued till the 3d of February, when certain lords were appointed as commissioners to supply the place of the king, as the third branch of the legislature, till a regent should be appointed. A bill was immediately brought into the house of commons, and afterwards sent to the lords, for appointing the prince of Wales regent under certain restrictions, which met with violent opposition in both houses. The bill, however, was in its last stage, when, on the 10th of March, his majesty sent a message to parliament, acquainting them with his happy recovery. The narrow limits to which we are confined will not permit us to enter into a detail of the universal joy this happy and unexpected event occasioned. We must content ourselves with observing, that the illuminations at night were such as had never been equalled before in this, or perhaps, any city in the world. In 1790, an armament was prepared to act against Spain, on account of certain hostilities committed by the Spaniards upon the north-western coast of America; but a negociation having taken place, the Spanish court agreed to an indemnification, and peace was re-established upon honourable terms. Another rupture had like to have broken out with Russia, in 1791, which was successfully terminated by negociation. In the year 1792 the king thought proper to enter into a war with France; the dangerous principles propagated in that country, together with the murder of the king, were held out as the motives. The events were numerous and astonishing; but our limits confine us to a brief mention of some of the most important occurrences. On the 21st June, 1793, his majesty went to the house of peers, and delivered a speech, in which he mentions having concerted with other powers for the effectual prosecution of hostilities: war against Great Britain and Holland had been decreed, Feb. 1st, in the French national convention; soon after which the duke of York set out for Holland to take the command of the British forces destined to act with the allies, and after several hazardous enterprises commenced the siege of Valenciennes, on the 14th June 1793, which surrendered on the 28th July following. The island of Tobago, in the West Indies, was reduced by the British under major-general Cuyler in April of this year, and on the 14th May the small islands of St. Pierre and Miquelon were taken from the French by Ogilvy and Affleck. On the 19th of June the Nymph frigate, captain Pellew, of 36 guns, captured the Cleopatra French frigate of equal force, after a desperate action. In the beginning of September the British troops were unfortunate before Dunkirk, and compelled to retreat precipitately with a great loss of men, cannon, and stores. On the 28th of August, advices were received from admiral Hood, of his having, in conjunction with the Spaniards, taken possession, by treaty, of the port of Toulon, with the men of war, &c. but in the latter end of Nov. 1793, the allies were compelled to evacuate it, after burning ten of the French ships of the line, and doing them other very great damage. On the evening of the 3d of Feb. 1794, a melancholy accident was occasioned at the Haymarket theatre by the great pressure of the crowd, by which 8 or 9 persons lost their

lives, and 20 or 30 were severely bruised. March 23d, the island of Martinico surrendered to the English under Sir Charles Grey, and shortly after the islands of St. Lucie and Guadaloupe to Sir John Jervis; but the glorious first of June rivetted the laurels on the brow of admiral earl Howe. The French force consisted of 26 ships of the line, and the British of 25; the ships captured from the French in this bloody engagement consisted of 2 of 80 guns, and 5 of 74; and during the joy of the English for this victory, advices were received from lord Hood of the capture of the island of Corsica To damp these signal victories, however, news was soon after received of the success of the French in the retaking of Guadaloupe and other islands, and of their depredations on the coast of Africa. In the latter end of this year several persons were tried for high treason. Thomas Hardy, standing foremost on the list, was tried and acquitted on the 5th of November, as were also the other persons. At this time the allies on the continent were defeated in every quarter, and the duke of York returned to England. On the 14th of March 1795, an action took place between the English fleet under admiral Hotham, consisting of 14 ships of the line, and the French fleet of about the same number; but the advantage on the part of the English, owing to the stormy state of the weather, was but trifling. A large force, chiefly emigrants, was landed at Quiberon, to aid the royalists; but were defeated with immense slaughter. On the 16th Sept. the Cape of Good Hope was taken by admiral Elphinstone and general Clarke; but on the 7th of October the English had the mortification to have a number of the homeward-bound Mediterranean fleet, richly laden, taken by a French squadron, with the Censeur, of 74 guns, one of the convoy. On the 29th of this month, as his majesty proceeded to open the session of parliament, he was grossly insulted by the populace with the cry of "Peace—Give us bread—No war—Down with George." &c. Several suspected persons were taken into custody, among whom was Kidd Wake, a journeyman printer, who was convicted of hissing, hooting, &c. and sentenced to five years' imprisonment in Gloucester gaol, and to stand in the pillory. Soon after this an act was passed for the preservation of his majesty's person, which was followed by another for preventing seditious meetings and assemblies. On the 22d of October, 1796, a negociation was attempted, and lord Malmesbury sent to Paris, but proved ineffectual; and on the 31st intelligence was received of an attempt to invade Ireland by a fleet of 17 ships of war, which anchored in Bantry Bay; but did not make the threatened descent. In the beginning of the year 1797 the British arms under general Abercrombie and admiral Hervey were very successful in the West Indies; and on the 14th of February, a most signal victory was gained by Sir John Jervis, (now lord St. Vincent,) over the Spaniards, who captured two ships of 112 guns, one of 84, and one of 74. Equal honour was done to the British flag by admiral Duncan on the 11th of October, who gained a complete victory over the Dutch fleet under admiral de Winter, and took eleven of their ships, while othe s that had struck, taking advantage of the night, escaped into the Texel. Previous to this latter victory our naval achievements were tarnished by a mutiny in the fleet, which had continued for some time, to the great distress of the nation and government; but was quelled at last, and Parker, the ringleader, and many others were executed. This year 1200 Frenchmen were landed on the Welsh coast, but were soon compelled by the loyal inhabitants to surrender at discretion. Another attempt at negociation with the French was made, but proved, like the former, unsuccessful. In the month of August, great disturbances took place in Scotland, particularly at Tranent, in opposition to the balloting for the militia; in quelling which, many lives were lost. On the 19th of December, his majesty, attended by both houses of parliament, went in state to St. Paul's, to return thanks for the naval victories obtained over the French, Dutch, and Spanish fleets. Affairs in Ireland were now deplorable; faction had long torn that unhappy country; but in the month of May, 1798, a rebellion broke out, which continued to rage for several months; but at last was suppressed by the king's troops, after many thousands of infatuated creatures had perished. In the month of September, about 1000 French troops landed in Ireland, and took possession of the town of Killala; but, after some successes over the king's troops, were compelled to surrender to general Lake. Another and more powerful attempt was made, by a formidable armament from Brest; but, being attacked and defeated off the coast of Ireland, by his majesty's fleet under Sir J. B. Warren, all the hopes of the rebels were completely crushed. This year an expedition of about 1000 men was sent by the English to Ostend, to destroy the gates and sluices of the canal of Bruges; which, after effecting its object, were attacked by superior numbers, and compelled to surrender. This misfortune, however, was amply compensated by the success of our naval commanders in every quarter; but especially by the ever-memorable victory of lord Nelson (Aug. 2) over the French fleet, in the bay of Aboukir, having sailed from Toulon in May, with an army of 36,000 men under general Buonaparte, which it had landed at Alexandria a few days before. The result of this brilliant action was seven ships of 74 guns taken; one of 80, and one of 74, burnt; besides two frigates of 36 guns sunk. Only four of the French fleet escaped. In the beginning of this year, a number of persons were arrested at Margate, on suspicion of treasonable intentions and practices; among whom were Mr. Authur O'Conner, John Binns, John Alley, James Favey, (alias Morris, alias Coigly) and Patrick Leary. After undergoing a trial at Maidstone, they were all acquitted, except Favey, who was found guilty, and executed on the 6th of June. In the year 1799, the English power in India was greatly extended by the defeat of Tippoo Saib, who was slain in battle, and his capital taken. In the latter end of the summer, an invasion of Holland was effected, by the combined English and Russian troops, under the duke of York; which, though at first successful, found it afterwards expedient to evacuate the country. In the mean time the Dutch fleet fell into the hands of the English, under admiral Mitchell. In the month of October, general Buonaparte returned from Egypt, and effected a great revolution at Paris, placing himself at the head of the government; and soon after made proposals of peace in a letter to the king; which, however, was rejected by the British ministry, who incurred the general displeasure of the country for their conduct. On the 15th of December, that great and virtuous man, general Washington, the first president of the United States of America, departed this life, in the 68th year of his age, after a short illness of only three days. In the year 1800, a legislative union of Great Britain and Ireland was effected, after strong parliamentary opposition, and was decreed to take effect on the 1st day of January, 1801, with the title of the United Kingdoms of Great Britain and Ireland. On the 15th of May, as his majesty entered his box at Drury-lane Theatre, a pistol was fired at him from the pit, by one James Hadfield, who had served under the duke of York; but, after a trial for high-treason, on the 26th of June, he was acquitted on proof of his insanity. On the 14th of June the French gained a memorable victory over the Austrians, at the battle of Marengo, in Italy, and on the Rhine were equally successful; which compelled the Austrians to make peace. About this time an expedition, under Sir James Pulteney, landed a body of troops near Ferrol; and, having gained complete possession of the heights which command the place, and nothing was expected but a speedy possession of the town and shipping, a re-embarkation was ordered, to the great mortification of the troops, and to the great surprise of the public. In the beginning of the year, 1801, a British force, under general Abercrombie and admiral Keith, sailed to the Mediterranean; and, on the 8th of March, effected a landing at Aboukir, in Egypt, in order to dispossess the French of that country; which was ultimately accomplished, after several sharp engagements, particularly that on the 21st of that month, in which the

brave Abercrombie received a mortal wound, of which he died about a week after, the command devolving on general Hutchinson. In the beginning of this year a confederacy was formed against England, by the Russians, Swedes, and Danes; and an embargo was laid upon all the ships of those nations in British ports. The object of the confederacy was to dictate a new maritime national law, to the prejudice of England. However, on the 12th of March, a fleet sailed from Yarmouth, under Sir Hyde Parker and lord Nelson, for the Baltic; but failing in an attempt to settle the business by negociation, the latter admiral attacked the Danish fleet in the harbour of Copenhagen, defended by their batteries; and, after destroying nearly the whole of their ships, compelled them to recede from the confederacy; which Sweden also shortly after agreed to do, without resistance: and the emperor Paul dying about this time, an end was put to this once alarming business. In the spring of this year a change of ministry took place, when Mr. Addington succeeded Mr. Pitt as chancellor of the exchequer. Three French ships of the line, in Algeziras Bay, near Gibraltar, were attacked in the beginning of July, by Sir James Saumarez; but the Hannibal of 74 guns getting aground, was obliged to be abandoned to the enemy; this loss, however, was more than overbalanced in a subsequent attack on the French and Spanish fleets, attempting to return to Cadiz; when two of the largest ships in the Spanish navy were burnt, and a French 74 gun ship taken. After this, several attacks were made by a light squadron, under lord Nelson, on the flat-bottomed boats, &c. collected at Boulogne, for the purpose of invading England; but these petty enterprises, totally failed in their object, though attended with the loss of many valuable lives. Towards the close of the year, hostilities were suddenly terminated by the treaty of Amiens, an event which excited universal joy, but produced a calm of very limited duration. During the short interval of peace, in February 1803, colonel Marcus Despard was executed on the charge of having formed a treasonable conspiracy with certain associates, for the purpose of destroying his majesty's life, a charge which he solemnly denied on the scaffold. In the spring of the same year, the war with France was renewed, Great Britain and France not having been able to make satisfactory arrangements as to the future condition of Malta. On July 23d, an insurrection burst forth at Dublin, which was easily suppressed, but not till after colonel Brown and lord Kilwarden had been murdered by the multitude. Great apprehensions were now entertained of a French invasion, in consequence of which all parties became in a degree united, and vast numbers of persons of every condition of life, enrolled themselves in volunteer corps, for the defence of their country. The French seized upon Hanover, but were on the other side obliged to give up St. Domingo, the islands of St. Lucia, and Tobago, in the West Indies. Surinam was also reduced by the British. A war with the Mahrattas was speedily and successfully terminated by lord Wellesley. The events of 1804 were neither many nor great. A French squadron was defeated by the homeward bound East India fleet, under commodore Dance. On the continent, Napoleon was proclaimed emperor of France, and Francis having laid aside his former title of emperor of Germany, assumed that of emperor of Austria, which is to be hereditary in his family. Following such great examples, Dessalines, the black chief of St. Domingo, caused himself to be proclaimed emperor of Hayti, the native appellation for that island. In 1805 the war was renewed on the continent of Europe, Russia and Austria having declared themselves the enemies of France. On the part of the French, a series of victories advanced their power to the highest eminence; the campaign, which opened in September, was terminated before the end of the year, by the treaty of Presburgh, which was a consequence of the battle of Austerlitz, in which the Austrians had been totally defeated on the 2d of December. In the mean time, the battle of Trafalgar, annihilated the fleet of the enemy, while the joy which it occasioned, was mingled with grief, on account of the death of lord Nelson. On the 23d of January, 1806, died the right honourable William Pitt, to whose talents all parties have united to do justice, while the most various opinions have been entertained as to the wisdom and justice of his measures. His illustrious rival, Charles James Fox, did not long survive him his death took place towards the close of the same year, and excited general regret. The same year added to the successes of the French on the continent, and to that of the British in other parts of the world. The king of Naples having afforded some countenance to the operations of the Anglo Russian army, brought upon himself the vengeance of the French emperor, by whose forces he was expelled from the continent of Italy, though the English had obtained in his favour, the brilliant victory of Maida. A war, which broke out with Prussia, was terminated in the July of the succeeding year, by the treaty of Tilsit, by which Prussia was deprived of about half her dominions; peace was concluded with Russia, and a new kingdom was created, called the kingdom of Westphalia. Intelligence was received of the capture of the Cape of Good Hope, and its depending territories, in Africa, and of Buenos Ayres, in South America. The latter acquisition excited the highest hopes of our merchants and manufacturers, who expected to obtain, in the Spanish settlements, an abundant market for their commodities. They soon, however, experienced a cruel disappointment, the British being compelled to abandon that part of the world, in July 1806. The African slave-trade, which had long been regarded by good men, as a deep stain in our national character, was abolished on the 25th of March, 1807, after the question had been keenly agitated for 20 years. After the gigantic successes of the French against the Austrians, Russians, and Prussians, it was believed to be impossible that Denmark should maintain a neutrality, and her politics were regarded as more favourable to the interests of France than of Britain. It was therefore determined, either by negociation or force, to secure the Danish navy, and every proposition on the subject having been rejected by the crown prince with disdain, Copenhagen was bombarded, and on the 7th of September compelled to surrender, after a large part of that city had been burned. On the 9th of November the orders of council were published, which regulated the commerce of neutrals, with the belligerent powers; and about the same time, the Portuguese government abandoned Europe, and removed to the Brasils. The most important events of the year 1808, were those which took place in Spain and Portugal, of which countries the French had treacherously obtained possession the preceding year. In May and June, the spirit of resistance became generally manifest, the inhabitants of the different provinces, as well as of the capital, endeavouring to vindicate their liberties by arms. On the 20th of July, the French general Dupont, was obliged to surrender with his whole army, to the patriots at Baylen. On the 27th, Madrid was evacuated by the French. August 21st, general Junot was defeated by the British at the battle of Vimiera, but in the course of a few days, was extricated from his perilous situation, by the convention of Cintra. Towards the close of the year, however, the French were decidedly victorious, and the Spaniards were defeated in every quarter, and on the 5th of December, the enemy obtained possession of Madrid. In 1809, the attention of the public was deeply engaged by the investigation of the conduct of the duke of York, which terminated in his acquittal, by the house of commons, March 20th, and his resignation of his office as commander-in chief, on the 25th of the same month. On the 17th of January, Sir John Moore was slain at the battle of Corunna, in which, though the British were victorious, they were obliged the next day to evacuate the country. July 28th, Sir Arthur Wellesley, (now the marquis of Wellington) defeated the French at the battle of Talavera. In the mean time, a war broke forth between the Austrians and the French, which terminated, as usual, to the advantage of the latter. On the 6th of April

war was proclaimed by the Austrians; before the middle of May, Vienna was taken by the French; after this some severe battles were fought, in several of which the Austrians were victorious, but on the 12th of July the emperor was obliged to agree to an armistice, which was followed on the 14th of October, by a disadvantageous peace. On the 28th of July, and the succeeding day, the British forces embarked on the disastrous expedition to Walcheren, on the 15th of August Flushing was taken, but on the 23d of December the island was abandoned by our countrymen, after having sustained great injury from disease, and having lost vast numbers of their fellow soldiers. In 1810, nothing excited more general attention than the arrest of Sir Francis Burdett, who was committed to the tower on the 8th of April, being charged with violating the privileges of the house of commons. The affray which took place on this occasion, the public meetings which followed, the legal contests which Sir Francis has unsuccessfully sustained, and various other interesting circumstances connected with his arrest, are fresh on the recollection of the reader, and it would exceed our limits to detail them particularly. This year Guadaloupe was taken by the British, in the West Indies; and Amboyna and the isle of Bourbon in the East. On the side of Spain and Portugal, no very great events took place, but lord Wellington displayed great courage and prudence in defending the lines of Torras Vedras, against the French general Massena. The long illness of the princess Amelia, which terminated in her death, towards the close of 1810, preyed so deeply on his majesty's mind, that he, at length, sunk under a similar malady with that which affected him in 1789. The consequences are well known. The parliament having met on the 29th of November, adjourned for a fortnight. Several other adjournments followed; the royal physicians were examined, and after much spirited discussion, it was at length resolved, that the prince of Wales should be declared regent, who entered on his high office in February 1811. The merits and results of his government, it will be the province of future historians to record. George III. was married Sept. 8, 1761, to the princess Sophia Charlotte, of Mecklenburgh Strelitz, born May 19, 1744, crowned Sept. 22, 1761, and now has issue; 1. George Frederic Augustus, prince of Wales, born Aug. 12, 1762, married April 8, 1795, to the princess Caroline Amelia Elizabeth, daughter of the late Charles, duke of Brunswick, his cousin-german, born May 17, 1768; issue, princess Charlotte Augusta; born Jan. 7, 1796; 2. Frederic, duke of York, born August 16, 1763, elected bishop of Osnaburg, Feb. 27, 1764, married Sept. 29, 1791, to Frederique C. Ul. Catharine, eldest daughter of the king of Prussia, born May 7, 1767; 3. William Henry, duke of Clarence, born Aug. 21, 1765, 4. princess Charlotte Augusta Matilda, queen of Wirtemberg, born Sept. 29, 1766, lady of the imperial Russian order of St. Catharine, married May 18, 1797, to his serene highness Frederic Charles William, then hereditary prince, afterwards reigning duke, and now king of Wirtemberg Stutgardt; 5. prince Edward, duke of Kent, born Nov. 2, 1767; 6. princess Augusta Sophia, born Nov. 8, 1768; 7. princess Elizabeth, born May, 22, 1770; 8. prince Ernest Augustus, duke of Cumberland, born June 5, 1771; 9. prince Augustus Frederic, duke of Sussex, born Jan. 27, 1773, married in Nov. 1693, at Rome, to lady Augusta Murray, daughter of the earl of Dunmore, which was declared void in Aug. 1794; 10. prince Adolphus Frederic, duke of Cambridge, born Feb. 25, 1774; 11. princess Mary, born April 25, 1776; 12. princess Sophia, born Nov. 3, 1777.

GEO'RGIA, a fertile country of Asia, called by the Persians Gurgistan, and by the Turks Gurtshi, is situated between the Black and Caspian Seas, and comprehends the antient Iberia, and part of Colchis. The hills are covered with forests of beech, oak, ash, chesnuts, walnuts, and elms, encircled with vines, growing spontaneously, and producing vast quantities of grapes. Cotton also grows spontaneously, as well as the finest fruit trees. Rice, wheat, millet, hemp, and flax, are raised on the plains, almost without culture. The valleys afford fine pasturage, the rivers are full of fish, the mountains abound with minerals, and the climate is delicious. The rivers, however, being fed by mountain torrents, are always too rapid or too shallow for the purposes of navigation. Georgia was formerly one kingdom, the inhabitants of which were Christians; but, since 1639, when it was conquered by the Persians, the country is divided between two native princes, by themselves called kings, but by the sophi styled governors. Each of these has a guard of Mahometan horse in his pay. The Georgians are skilled in the use of the bow, and are thought to be the best soldiers in Asia. Their dress resembles that of the Cossacks; but those that are wealthy affect the habit of the Persians. They usually dye their hair, beards, and nails red. The women who are celebrated for their beauty, stain the palms of their hands of the same colour, and paint their eye-brows black, in such a manner as to form one entire line, while the rest of the face is coated with white and red. Being generally educated in convents, they can read and write, qualifications uncommon with the men, even of the highest rank. The inhabitants are Christians, partly of the Greek, and partly of the Armenian church. Here are also Tartars Ossi, Armenians, and a considerable number of Jews. Of these last, some have villages of their own, others are mixed with the Georgian, Armenian, and Tartarian inhabitants, but never with the Ossi. They pay a small tribute above that of the natives. There are only four considerable towns, Tefflis, Gori, Suram and Ali.

GEO'RGIA, the most southern of the United States of North America, is bounded on the E. by the Atlantic Ocean; on the S. by East and West Florida; on the W. by that part of Louisiana which lies on the E. of the river Mississippi; and on the N. by S. Carolina and the Tennassee government. It extends about 420 miles from E. to W. and from 140 to 240 from N. to S. It contains nearly 90,000 souls, and is divided into 11 counties, namely, Chatham, Effingham, Burke, Richmond, Wilkes, Liberty, Glynn, Camden, Washington, Greene, and Franklin. The whole coast is bordered with islands, which, as well as the continent, being well wooded, the channel between them is extremely pleasant. The principal towns are Augusta, Savannah, Brunswick, Sunbury, Frederica, Washington, and Louisville. The principal rivers are the Savannah, Ogeechee, Alatamaha, St. Mary, &c. The winters in Georgia are mild and pleasant, ice and snow being seldom seen. The soil varies according to situation, and different degrees of improvement. By culture are produced rice, indigo, cotton, silk, Indian corn, potatoes, oranges, figs, pomegranates, &c. Rice, at present, is the staple commodity; but great attention begins to be paid to the raising of tobacco. Augusta is the capital.

GEO'RGIA, SOUTH, the principal of a cluster of islands in the South Atlantic Ocean, discovered by Captain Cook, in 1775, and so named by him. It is 31 leagues long, and its greatest breadth is about 10. It abounds in bays and harbours, which the vast quantities of ice render inaccessible the greatest part of the year. Two rocky islands are situated at the N. end, one of which was a craggy cliff, nearly perpendicular, containing the nests of many thousand shags; the other was called Bird Island, from the innumerable flocks of birds seen near it, from the largest albatrosses down to the least petrels. Several porpoises and seals were also observed. Here are perpendicular ice cliffs of considerable height, like those of Spitsbergen. From these, pieces were continually breaking off, and floating out to sea; the valleys were covered with snow, and the only vegetation observed, was a bladed grass growing in tufts, wild burnet, and a plant like moss. Not a stream of fresh water was to be seen on the whole coast. A great number of sea calves and sea-bears were found, and flocks of penguins, some of which weighed 38 pounds, and measured 3 feet 3 inches, in length. The only bird here appeared to be a species of the lark: no

quadruped was found. These islands lie between 53. 57 and 54. 57. S. lat. and between 35. 34. and 38. 13. W. lon.

GEO'RGIC, (*jór'jik*) *s.* [*georgikos*, from *ge*, the earth, and *ergon*, work, Gr.] some part of the science of husbandry put into a pleasing dress, and set off with all the beauties and embellishments of poetry.

GEO'RGIUM SIDUS, probably the most remote planet from the sun, was discovered by Dr. Herschel in 1781. It moves round its orbit in about 30,445 days 18 hours, at the immense distance of about 1800 millions of miles from the sun. On account of his distance from the earth, his rotation round his axis (and consequently the length of his days and nights) is unknown to us. Six satellites, as hath hitherto been discovered, revolve round this globe, which is about 90 times bigger than the earth. As seen from the earth, he appears under an angle of only 4 seconds of a degree, and it cannot be readily distinguished from a fixed star by a less magnifying power than 200 times.

GERA'NIUM, *s.* a plant of great variety, beauty, and exquisite flavour; the most valuable species are brought from Africa, but are raised with difficulty in this country.

GERFA'LCON, *s.* a bird of prey, in size between a vulture and a hawk, and of the greatest strength next to the eagle.

GERMA'IN, St. a town of Cornwall, with a small market on Friday. It was once the largest town in the county, but is at present a small place, though it sends two members to parliament. It was formerly a bishop's see, had a cathedral, and what is left of it is used as the parish church, and near it is the priory yet standing. It is 8 miles W. of Plymouth, and 224 W. by S. of London.

GERMAN, *s.* [*germanus*, from *germen*, a branch or shoot, Lat.] a brother; one approaching to a brother in nearness of blood; generally applied to the children of brothers and sisters, who are called *cousins german*.

GERMAN, *a.* [from *germen*, a branch or shoot, Lat.] related. Obsolete.

GERMA'NDER, *s.* [*germandrie*, Fr.] a plant with yellow blossoms, called also the ground-pine; likewise a kind of speedwell.

GE'RMANY, a country of Europe, bounded on the W. by Swisserland, France, the Belgic Provinces, and the German Ocean; on the N. by Sleswick and the Baltic Sea; on the E. by Prussia, Poland, and Hungary; on the S. by Hungary, the Adriatic, Italy, and Swisserland; being about 640 miles in length, and 550 in breadth. The air is temperate and wholesome, and the productions are various. Germany contains many princes, secular and ecclesiastic, who are independent of each other; and there are great numbers of free, imperial cities, which are so many little republics, governed by their own laws, and united by a head, who has the title of emperor. The prerogatives of the imperial dignity were formerly much more extensive than in latter years. At the close of the Saxon race, in 1024, the emperors exercised the right of conferring all ecclesiastical benefices in Germany; of receiving their revenues during a vacancy; of succeeding to the effects of intestate ecclesiastics; of confirming or annulling the election of the popes; of assembling councils, and of appointing them to decide on the affairs of the church; of conferring the title of king on their vassals; of granting vacant fiefs; of receiving the revenues of the empire; of governing Italy as its proper sovereigns; of erecting free cities, and establishing fairs; of assembling the diets of the empire, and fixing the time of their duration; of coining money, and conferring the same privilege on the states of the empire; and of administering justice within the territories of the different states. About the year 1437, however, the emperors were reduced to the power of conferring all dignities and titles, except the privilege of being a state of the empire; of appointing once, during their reign, a dignitary in each chapter or religious house; of granting dispensations with respect to the age of majority; of erecting cities, and conferring the privilege of coining money, and of calling the meetings of the diet, and presiding in them. The electors of the empire are 3 ecclesiastical, namely, the archbishops of Treves, Cologne, and Mentz; and 5 secular, namely, the king of Prussia, as elector of Brandenburgh; the king of Great Britain, as elector of Hanover; the present emperor, as king of Bohemia; the elector of Saxony; and the elector palatine of the Rhine. Each elector bears the title of one of the principal officers of the empire; the elector of Hanover, for instance, being "archtreasurer and elector of the holy Roman empire." To prevent the calamities of a contested election, a king of the Romans has often been chosen in the life-time of the emperor, on whose death he succeeds to the imperial dignity as a circumstance of course. Although chief of the empire, the supreme authority resides in the diets, which are composed of 3 colleges; that of the electors, that of the princes, and that of the imperial towns. When that of the electors and that of the princes disagree, that of the towns cannot decide the difference; but they are obliged to give their consent, when they are of the same opinion. The diets have the power of making peace or war, of settling general impositions, and of regulating all the important affairs of the empire. But their decisions have not the force of law till the emperor gives his consent. All the sovereigns of Germany have an absolute authority in their own dominions, and can lay taxes, levy troops, make alliances, &c. provided they do not prejudice the empire. They determine all causes definitively, unless in some particular cases, in which an appeal may be made. These appeals are to two courts, called the Imperial Chamber and the Aulic Council. Germany is divided into 9 circles, each of which comprehends several other states; the princes, prelates, and counts of which, with the deputies of the imperial towns, meet together about their common affairs. Each circle has one or two directors and a colonel; the directors have a power of convoking the assembly of the states of their circle, and the colonel commands the army. The 9 circles are those of Austria, Bavaria, Suabia, Franconia, Upper and Lower Rhine, Westphalia, and Upper and Lower Saxony. The principal rivers are the Danube, Rhine, Elbe, Weser, Maine, and Oder. The language of Germany is a dialect of the Teutonic, which succeeded that called the Celtic. The 3 principal religious professions are the Romish, Lutheran, and Calvinistic. The first prevails in the dominions of the emperor, in the ecclesiastical electorates and in Bavaria; the second in the circles of Upper and Lower Saxony, great part of Westphalia, Franconia, Suabia, the Upper Rhine, and in most of the imperial towns; the third in the dominions of the landgrave of Hesse-Cassel, and of some other princes. At present, however, the above constitution and form of government appears wholly or in part annihilated, inasmuch as Francis II. formerly resigned the empire of Germany, with its title, crown, and regalia, on the 6th of August, 1806; and he now bears only the title of Francis I. emperor of Austria, which he holds in his own right, it being hereditary in his family. This abdication was occasioned by the *Confederation of the Rhine*, which drew many of the Germanic states from their allegiance; and because of the advancement of the electors of Bavaria and Wirtemburg to the dignity of kings; over whom, and the elector of Baden, Francis was restrained from exercising any species of authority, as well as over their respective dominions, or the circles of Bavaria, Franconia, and Suabia. So that at present there is no supreme government over the empire of Germany; but every separate state appears at present to be governed by its own laws, without being amenable to any superior, though the emperor Napoleon must be considered as lord paramount of those states which compose the Confederation of the Rhine.

GERME, *s.* [*germen*, Lat.] a sprout or shoot; that part which grows and spreads. In botany, that part of a flower or plant which contains the seed.

GE'RMEN, *s.* [Lat.] a young sprout or shoot; a shooting or sprouting seed.

GHENT, a considerable city of the ci-devant Austrian Flanders, containing 6 parish churches besides the cathedral, a great many religious houses, and about 70,000 inhabitants, but not populous in proportion to its extent, which is so great, that Charles V. is reported to have said to the French king, Francis I. "I have a glove," (the French name for Ghent being *Gant*, a glove,) "in which I can put your whole city of Paris." The city is divided by canals into 26 islands, and over the canals there are 300 bridges. The streets are large, and the market-place is spacious. They have flourishing manufactures of silk, woollen, linen, and a great trade in corn. There is a large canal which passes from Ghent to Bruges, and thence to Ostend; and another which passes to Sas de Ghent. Ghent is seated on the confluence of the rivers Scheldt, Lis, Moeze, and Lieve, 26 miles N. W. of Brussels. Lat. 51. 3. N. lon. 3. 49. E.

GHERGONG, a city of Indostan, capital of the kingdom of Assam, seated on a river which runs a little below into the Burrampooter, about 400 miles N. E. of Calcutta. Lat. 26. 25. N. lon. 93. 40. E.

GHILAN, a beautiful province of Persia Proper, extending along the S. W. coast of the Caspian Sea, and supposed to be the Hyrcania of the antients. It has Schirvan to the N. Aderbeitzan, and part of Irac-Agemi to the W. and Mezanderan to the SE. and is about 200 miles long, and 150 broad. The sea forms its boundary on one side, and on the other are high mountains covered with various sorts of fruit-trees. In the highest part of them are deer, bears, wolves, leopards, and tigers, which last the Persians have, it is said, a method of taming, and hunt with them as with dogs. It is extremely fertile, producing silk, oil, wine, rice, tobacco, mulberry, box, walnut trees, and excellent fruits in abundance. This province was ceded to Russia in 1723, but not formally annexed to the Russian dominions till 1780. Reshd is the capital.

GHOST, (*gōst*) *s.* [*gast*, Sax.] the soul of a man; a spirit or spectre seen after the death of a person. When joined with *Holy*, it implies the third Person of the Holy Trinity, otherwise termed the *Spirit*, as this word likewise signifies. To *give up the ghost*, is to expire; to die; or to yield our soul into the hands of him that gave it.

GIBRALTAR, a town of Andalusia, in Spain, near a mountain of the same name, formerly called Calpe, which, with Mount Abyla, on the opposite shore of Africa, were called the Pillars of Hercules. It was formerly thought to be

impregnable; but, in 1704, it was taken by the confederate fleet, commanded by Sir George Rook. The French and Spaniards attempted to retake it the same year, and 4 or 500 of them crept up the rock which covers the town, in the night time, but were driven down headlong the next morning. In 1727, the Spaniards besieged it again, and they attempted to blow up the rock which they found impracticable, and were at length obliged to raise the siege. In the course of the American war, the Spaniards again besieged it; but their ever memorable attack, on September 13, 1782, with floating batteries of 212 brass cannon, &c. in ships, from 1400 to 600 tons burden, ended in a disappointment, in the destruction of all the ships, and most of the assailants in them. General Elliot at this time commanded the garrison. The garrison here are cooped up in a very narrow compass, and have no provisions but what are brought from Barbary and England. The town is now so strong by art and nature, as probably to bid defiance to the utmost efforts of an enemy. Here are upwards of 300 pieces of cannon mounted on the works. Gibraltar contains several streets, one of which is pretty spacious and well paved; the others are narrow and dirty. It has also 3 gates. It is built at the foot of a barren rock, or craggy hill, which rises about 1400 feet above the level of the sea, in a peninsula, which can be approached only by a narrow passage, between the mountain and the sea. Across this isthmus the Spaniards have drawn a fortified line, to prevent the garrison from having any communication with the country. The English here, exclusive of the garrison, amount to about 2000, and the Spaniards, Portuguese, Genoese, and Jews, to as many more. Here is one English and one Spanish church, and a Jews' synagogue. The road is not safe against storms, nor convenient for refitting vessels, though they may be laid on their sides for careening; the harbour is formed by two moles, one of which is 300 feet in length. On the summit of the rock is a plain, whence there is a fine prospect of the sea on each side the Strait, of Barbary, Fez, and Morocco, and of Seville and Granada in Spain. The Strait of Gibraltar is about 24 miles in length, and 15 in breadth, and a strong current always runs through it from the ocean to the Mediterranean. Gibraltar is 25 miles N. of Ceuta, and 49 S. E. of Cadiz. Lat. 36. 6. N. lon. 5. 22. W.

GLA'CIAL, *a.* [from *glacies*, ice, Lat.] icy; made of ice; frozen.

GLACIA'TION, *s.* [from *glacies*, ice, Lat.] the act of turning into ice; ice.

GLA'CIERS, a name given to some extensive fields of ice in Swisserland. The Glaciers may be divided into two sorts; the Lower, occupying the deep valleys situated in the bottom of the Alps, and termed, by the natives, Valley of Ice; and the Upper, which clothe the summits and sides of the mountains. The Lower Glaciers are the most considerable in extent and depth, some stretching several leagues in length. At the higher extremity, they are bordered by inaccessible rocks, and on the other extend into cultivated valleys. The thickness of the ice varies from 80 to 100 feet, and in some parts extend to upwards of 600 feet. These immense fields of ice usually rest on an inclined plain; being pushed forward by the pressure of their own weight, and but weakly supported by the rugged rocks beneath, they are intersected

by large transverse chasms, and present the appearance of walls pyramids, and other fantastic shapes, observed at all heights and at all situations, wherever the declivity exceeds 30 or 40 degrees. But in those parts, where the plain on which they rest is nearly horizontal, the surface of the ice is passable, being not so slippery as that of the frozen ponds, or rivers; it is rough and granulated, and is only dangerous in deep descents. The following is a simple and natural theory relative to the formation of the Glaciers. An immense quantity of snow is continually accumulating in the elevated valleys inclosed within the Alps, as well from that which falls from the clouds, during nine months in the year, as from the masses which are incessantly rolling from the steep sides of the circumjacent mountains. Part of this snow, which is not dissolved during summer, impregnated with rain and snow-water, is frozen during winter, and forms that opaque and porous ice of which the Lower Glaciers are composed. The Upper Glaciers may be subdivided into those which cover the summits, and those which extend along the sides of the Alps. Those which cover the summits owe their origin to the snow that falls at all seasons of the year, and which remains nearly in its original state, being congealed into a hard substance, and not converted into ice; for in so cold a region there cannot be melted a quantity of snow sufficient to impregnate with water the whole mass, which remains undissolved. The substance which clothes the sides of the Alps is neither pure snow, like that of the summits, nor ice which forms the Lower Glaciers, but is an assemblage of both. It contains less snow than the summits, because the summer heat has more power to dissolve it, and because the liquefied snow descending from above, the mass is penetrated with a large quantity of water. It contains more snow than the Lower Glaciers, because the dissolution of the snow is comparatively less. Hence the ice is even more porous, opaque, and less compact, than the ice of the Lower Glaciers; and is of so doubtful a texture, as renders it, in many parts, difficult to decide whether it may be called ice or frozen snow. Thus there is a regular gradation from the snow on the summits, to the ice of the Lower Glaciers, formed by the intermediate mixture of snow and ice, which becomes more compact, and less porous, in proportion as it approaches the Lower Glaciers, until it unites and assimilates with them.

GLAMORGANSHIRE, a county of S. Wales, bounded on the N. by Carmarthenshire and Brecknockshire, on the E. by Monmouthshire, and on the S. and W. by the Bristol Channel. It extends from E. to W. 48 miles, and 26 from N. to S. It is divided into 10 hundreds, which contain 1 city, 8 market towns, 118 parishes, about 10,000 houses, and 58,000 inhabitants. On the N. side of this county, where it is mountainous, the long continuance of the snow renders the air sharp; but the country being more level on the S. side, it is there milder, more pleasant, more populous, and bears large crops of corn, with remarkably sweet grass; whence it has been called the Garden of Wales. Cattle abound in all parts, there being fruitful valleys among the mountains, that yield very good pasture. Here are also lead, coal, iron, and limestone. Its principal rivers are the Rumney, which separates it from Monmouthshire, the Teafe, Elwy, Neath, Ogmore, Avon, Cledaugh, and Tawy. Cardiff is the principal town, and Swansea the most commercial one; but the assizes for the county are held at Cowbridge.

GLANCE, *s.* [*glantz*, Teut.] a sudden shoot or beam of light or splendour; a stroke or dart of light.

To GLANCE, *v. n.* [*glantzen*, Teut.] to shoot a sudden ray of light or splendour; to fly off, or to strike in a sloping manner. Used with *at*, to hint at, or censure a person's faults by some oblique hints. Used with *eye*, to take a quick, slight, or transient view; to view obliquely.

GLA'NCINGLY, *ad.* in an oblique manner; transiently.

GLAND, *s.* [*glans*, Lat.] in anatomy, a soft spungy substance, which serves to separate a particular humour from the blood.

GLA'NDERS, *s.* in farriery, a running of corrupt matter from the nose, differing in colour, according to the degree of malignity, being white, yellow, green, or black.

GLA'NDFORD BRIDGE, a town of Lincolnshire, with a large manufacture of skins, and a considerable trade in corn, coals, and timber. It is seated on a river or navigable canal, called Ancholme, or Ancam, 23 miles N. of Lincoln, and 156 N. by W. of London. Market on Thursday.

GLANDI'FEROUS, *a.* [from *glans*, a nut or acorn, and *fero*, to bear, Lat.] bearing acorns, mast, or fruit like acorns.

GLA'NDULE, *s.* [from *glandula*, a little nut, Lat.] in anatomy, a small gland; sometimes applied, in the plural, to signify what are vulgarly called the *almonds of the ear*

GLANDULO'SITY, *s.* a collection of glands.

GLA'NDULOUS, *a.* [from *glans*, a gland, Lat.] pertaining to, situate in, or having the nature of, the glands.

To GLARE, *v. n.* [*glaren*, Belg.] to shine so bright as to dazzle the eyes.

GLARE, *s.* an overpowering or dazzling lustre; a fierce, piercing look.

GLA'REOUS, *a.* [*glareosus*, Lat.] consisting of a viscous and transparent matter like the white of an egg.

GLA'RING, *part.* of *glare*; flagrant; enormous, applied to any very great crime.

GLA'RIS, or GLARUS, one of the thirteen cantons in Switzerland, entirely surrounded by the Alps, except towards the N. It has the canton of Schweits on the W. and the Grisons on the E. It is a cold, mountainous country, yet affording cattle, cheese, butter, and a prodigious variety of uncommon plants, minerals, metals, crystals, medicinal springs, petrifactions, and large slates. The government is, or lately was, perfectly democratic; every person, at the age of sixteen has a vote in the landsgemeind, or general assembly, which is held annually in the month of May, in an open plain, according to the custom of the antient Gauls and Germans. This assembly ratifies new laws, raises contributions, enters into alliances, declares war, and makes peace. The executive power, however, is vested in a landrath, or council, composed of 48 protestant members, and 15 Roman catholics. The landamman, or chief of the

republic, is chosen alternately from among the protestants and Romanists, who live together here in great harmony, amicably fill together the chief offices of state, and successively make use of the same house for their assemblies for public worship. The population amounts to about 16 or 17,000 souls.

GLA'SGOW, a city of Scotland, in the county of Lanerk, which, from its extent, and from the beauty and regularity of its buildings, may justly be esteemed the second city in the kingdom. The streets are clean and well paved; and several of them, intersecting each other at right angles, produce a very agreeable effect. The four principal streets thus divide the city nearly into four equal parts; and the different views of them, from the cross, or centre of intersection, have an air of magnificence. Here are a few magnificent public buildings, and several charitable establishments, particularly the Merchants' Hospital, and that of the town. Here is a celebrated university; the single college belonging to which is an elegant and commodious building. The number of inhabited houses in it is upwards of 10,000, and it contains near 62,000 inhabitants. A considerable trade was formerly carried on here in tobacco and rum, but it has been lately on the decline. Their cotton manufactures rival those of Manchester in cheapness and elegance; and, before the late universal check to that branch of business in both kingdoms, it is said that cotton goods were manufactured in Glasgow and its vicinity to the annual amount of 2,000,000*l.* sterling. A pottery is likewise carried on here, that emulates, in beauty and elegance, the Staffordshire ware. Printing-types are well executed here, and the glass manufactory has been very successful. Here are also manufactures of coarse earthenware, hats, stockings, gloves, ropes, cordage, &c. Glasgow has the advantage of two canals, besides the great canal that joins the Clyde to the Forth. Its proper river, the Clyde, has, at a great expence, been made navigable, within the last 30 years, for vessels drawing 7 feet 6 inches water. It is seated on the N. bank of the above river, over which it has two stone bridges, (one of them an elegant new one, of 7 arches, 500 feet long, and 32 wide; it was completed in 1772) 10 miles S. W. of Dumbarton, and 35 W. of Edinburgh. Lat. 55. 52. N. lon. 4. 2. W.

GLASS, *s.* [*glæs*, Sax.] an artificial substance, made by fusing or melting fixed salts, flint, and sand together with a vehement fire, transparent to the sight, ductile when hot, but not malleable. The manufacture of glass was known very early; but glass perfectly transparent was reckoned so valuable, that Nero is said to have given 50,000*l.* for two cups with handles. When the excavations were made in the antient city of Pompeii, which was buried by an eruption of Vesuvius A.D. 79, the windows of some of the houses were found glazed with a thick kind of glass, not transparent. In others isinglass was substituted, split into thin plates. Glass windows were first used in England about the year 1180. A glass vessel of any kind, particularly a cup with a foot, to drink out of; hence figuratively, it is used for that quantity of liquor which such a vessel contains, as *a glass of wine*. A glass to view one's face in; a perspective or glass to view distant or near objects with; a glass made use of for measuring time, by means of sand, which runs through a small aperture, and called an *hour-glass*.

GLA'SSFURNACE, *s.* a furnace in which glass is made by liquefaction.

GLA'SSGAZING, *a.* finical.

GLA'SSGRINDER, *s.* one whose trade is to grind and polish glasses.

GLA'SSHOUSE, *s.* a house where glass is manufactured.

GLA'SSMETAL, *s.* glass in fusion.

GLA'SSWORK, *s.* manufacture in glass.

GLA'SSWORT, *s.* a plant, with spreading, jointed, herbaceous stems and flowers, without blossoms, placed in the clefts of the joints. It is also called saltwort and marsh samphire.

GLA'SSY, *a.* resembling glass in smoothness, lustre, or brightness.

GLA'STONBURY, a pretty large and well built town of Somersetshire, principally consisting of two streets, in both of which are many houses, either entirely built, or patched up, with stones from its abbey; formerly the most magnificent in the world, the domains and revenue of which were immense. It was antiently called Ava'lonia, or the Isle of Avalon, into which no person whatever, not even a bishop or prince, was allowed to enter, without leave from the abbot, to whom this power was granted by Canute the Dane. There were 61 abbots, who sat among the barons in parliament, and governed it successively for near 600 years. Richard Withing, the last, for refusing to surrender his abbey to Henry VIII. and acknowledge his supremacy, was condemned at Wells, and carried with two of his monks, on a hurdle, to the Tor, or St. Michael's Tower, a high hill in the neighbourhood, where he was hanged in his robes. His head was stuck up over the gate of his abbey, and his body, quartered, was exposed in like manner at Bath, Wells, Bridgewater, and Ilchester. Extensive ruins of this immense range of buildings are still remaining; but they have been much diminished for the sake of the stones, as every cottage hereabouts has part of a pillar, door, or window of this fabric; however, the curious structure, called the abbot's kitchen, is yet entire, and is of a very unusual contrivance, being built of stone, without any combustible material; as are also some fragments of the church and St. Joseph's chapel. The walls that remain are overgrown with ivy; and the aspect of the whole is, at once, melancholy and venerable. The principal manufacture here is stockings. Nearly adjoining, on a high steep hill, is placed the tower of a church, the Tor above-mentioned, which lifts its head into the clouds, and is an object of admiration to travellers, and even serves as a landmark to seamen in the Bristol Channel. It is situated in a low, marshy country, nearly encompassed with rivers, 6 miles S. W. of Wells, and 129 W. by S. of London. Market on Tuesday.

GLAUCO'MA, *s.* [from *glaukos*, greenish blue, Gr.] in medicine, a disorder of the eye.

GLAVE, *s.* [*glaive*, Fr.] a broad sword.

To GLAZE, *v. a.* to furnish windows with glass; to cover with a substance resembling glass, like that with which potters cover their earthenware, porcelain, &c. To cover or overlay with something shining.

GLO'SSY, *a.* having a shining and smoothly polished surface.

GLO'TTIS, *s.* [Lat.] the mouth or aperture of the larynx, through which the air ascends and descends in respiring, serving for the formation of the voice, and giving that wonderful variety of notes of which the voice is capable in speaking and singing.

GLOU'CESTER, (*Glóster*) a large, populous, and considerable city of Gloucestershire, containing 5 parish churches, besides its antient and magnificent cathedral. It is well built, and has been lately much improved; its four principal streets are greatly admired for the regularity of their junction in the centre of the town; besides which there are several smaller ones, all well paved. Here is a good stone bridge over the Severn, the lowest down that river, with a quay, wharf, and custom-house. Gloucester has a flourishing manufacture of pins, and is seated on the E. side of the Severn, where, by its two streams, it forms the Isle of Alney, 35 miles N. E. by N. of Bristol, and 106 W. by N. of London. Market on Wednesday. Fairs on April 5, July 5, Sept. 28, and Nov. 28, the latter chiefly for fat hogs.

GLOU'CESTERSHIRE, a county of England, bounded on the W. by Monmouthshire and Herefordshire; on the N. by Worcestershire; on the E. by Warwickshire and Oxfordshire; and on the S. by Wiltshire and Somersetshire. It extends from N. E. to S. W. more than 60 miles, but is not more than 26 in breadth. It is divided into 13 hundreds, which contain 1 city, 27 market-towns, 280 parishes, 1229 villages, about 26,760 houses, and 162,560 inhabitants. The soil and appearance of this county vary in different parts, but the air is healthy throughout; sharp on the E. or hilly part, which contains the Coteswold Hills, but mild in the rich vale of Severn, which occupies the centre. The W. part, which is the smallest district, is varied by hill and dale, and chiefly occupied by the Forest of Dean, which was once full of oak trees, but the iron works have consumed a great part of them. The staple commodities are cheese, cyder, perry, bacon, grain, and fish, besides its manufactories of woollen cloths, hats, leather, paper, bar iron, edge tools, nails, brass, &c. Its rivers are the Severn, the Warwickshire Avon, the Lower Avon, the Wye, Thames, Coln, Lech, Windrush, Evenlode, Churn, Leden, Swiliate, Caron, and Stour.

To GNAR, or GNARL, (*nar* or *narl*) *v. n.* [*gnyrran*, Sax.] to growl, murmur, snarl, or grind the teeth.

GNA'RLED, (*nárled*) *a.* knotty.

To GNASH, (*nash*) *v. n.* [*knaschen*, Belg.] to strike or clash together, applied to the teeth, either on account of rage, or from a sensation of excessive cold or agony.

GNAT, (*nat*) *s.* [*gnat*, Sax.] a small winged insect, or fly, of which there are, according to Derham, at least 40 distinct species. In its vermicular state, it is a red maggot, and has a mouth and other parts accommodated to food; in its aurelia state, it has no such parts, because it subsists without food: but in its mature (gnat) state, its mouth is furnished with a curious well-made spear, to suck out the blood of other animals.

GNA'TFLOWER, *s.* a flower otherwise called the bee-flower.

GNA'TSNAPPER, *s.* a bird so called because he lives by catching gnats.

To GNAW, (*naw*) *v. a.* [*gnagan*, Sax.] to bite and tear off by means of the teeth: to eat or chew by degrees; to bite in agony and rage. To fret, waste, or corrode.

GNA'WER, (*náwer*) *s.* one who bites or tears to pieces with the teeth.

GNO'MES, (*nōmes*) *s.* certain invisible people, who, according to the Cabalists, inhabit the inner parts of the earth. They are supposed small in stature, and the guardians of quarries, mines, &c.

GNO'MON, (*nōmon*) *s.* [*gnomon*, from *ginosko*, to know, Gr. because the gnomon serves to direct or make known] the hand, index, or pin of a dial.

GNOMO'NICS, (*nómoniks*) *s.* [from *gnomon*, the index of a dial, Gr.] dialing; or a science which teaches to find the just proportions of shadows for the construction of all sorts of sun-dials.

GNO'STICS, (*Nostiks*) [*gnostikoi*, from *ginosko*, to know, Gr.] in church history, a name which almost all the antient heretics affected to take to express that new knowledge and extraordinary light to which they made pretensions; the word Gnostic, signifies a learned and enlightened person.

GNU, *s.* in natural history, a very large species of antelope, found in the South of Africa.

To GO, *v. a.* preter. *I went*, *I have gone*, participle *gone*; [*gan*, Sax.] to move step by step; to walk; to move slowly, opposed to *running*. To proceed from one to another. To depart from a place. To move, or pass in any manner, or to any end. To intend, or be near undertaking a thing. To march in a hostile or warlike manner. To change state or opinion for better or worse. To have recourse to. To tend towards death or ruin. "He is far *gone*." To tend to any act. To be in a state of compact or partnership. "*Go* your halves." To be regulated by any method. To be pregnant. "*Gone* with young." To reach, or be extended to any degree. "No man's knowledge can *go* beyond his experience." To contribute; to conduce; to concur; to fall out, or terminate; to proceed in train or consequence; to succeed. To *go about*, to attempt, to endeavour. To *go aside*, to err, to deviate from the right. To *go between*, to interpose. To *go by*, to pass unnoticed. To find, or get in the conclusion; to observe as a rule. GRAVESEND, a town of Kent, consisting chiefly of one paved and lighted street. It is a place of considerable resort, being a common landing-place for seamen and strangers in their passage to London. It is commonly called the corporation of Gravesend and Milton, these two places having been incorporated by queen Elizabeth. In the reign of Richard II. the French and Spaniards came up the Thames, burnt and plundered it, and carried away most of the people; and, by way of compensation for this loss, he granted the remaining inhabitants the exclusive privilege of carrying passengers between this place and London, in large and commodious boats, at two pence a-head, or a whole boat's fare at four shillings. They still enjoy this privilege; but the fare is now nine-pence a-head, and the boats are much improved. For its better security, Henry VIII. raised a blockhouse, with a platform of guns, to the E. of the town. The gardens round the town are so rich, that they not only supply the shipping, and all the towns for several miles round, with every article of that kind, but great quantities, and particularly of asparagus, remarkably fine, are sent to London. The chief employment of the labouring people is the spinning of hemp, to make nets for fishing, and ropes. It is situated on the Thames, directly opposite to Tilbury Fort, 9 miles W. N. W. of Rochester, and 22 S. by E. of London. Markets on Wednesday and Saturday; and a fish-market on Sunday morning.

GRE'CE, a country of Turkey, called by them at present Romelia. It is bounded on the N. by Bulgaria, Servia, and Dalmatia; on the W. by the gulph of Venice; on the S. by the Mediterranean; and on the E. by the Archipelago, the sea of Marmora, the Black sea, the straits of the Dardanelles and of Constantinople. It comprehends six parts, namely, Macedonia, Albania, Livadia, the Morea, the island of Candia, and the isles of the Archipelago. It enjoys a temperate air, is healthy, and has a fruitful soil. It was greatly celebrated by antient historians, and produced a vast number of famous men, who performed very great actions as soldiers, as well as others, who were eminent for their parts and learning; particularly Alexander the Great and Homer, who were natives of this country. But it now groans under the tyranny of the Turks, and is but the shadow of what it was formerly, being over-run with ignorance and barbarism, and almost all the fine towns quite destroyed. It is inhabited both by Mahometans and Christians.

GRE'ENLAND, a country including some islands, situated between the straits of Davis and Frobisher, and Iceland. The northern limits are as yet unknown. West Greenland seems to be the most N. easterly part of America. East Greenland lies in a high latitude. N. of the continent of Europe, as does also Spitzbergen, which is sometimes comprehended under the general name of Greenland. The seas on the coast are annually visited by a great number of ships of the English and other European nations, for the purpose of fishing for whales. The most southerly point of land in West Greenland, is Cape Farewell, at the entrance of Davis's Straits, in lat. 59. 38 N. and in lon. 42. 45. W. The Greenlanders are strangers to trade, arts, and sciences. They are generally short, or under the common size, but well-proportioned, fat, and plump. Their clothing is made of the skins of the rein-deer, the dog-fish, and of certain birds, sewed together with the small guts of the *canis marinus*. It is very seldom that they are afflicted with epidemical diseases, but the scurvy is the reigning distemper in this country; their common remedy on this occasion, besides other simples, is scurvy-grass. Both sexes live together in a very sordid, filthy manner, in two sorts of habitations, one of which serves for the winter, and the other for the summer season. Their winter dwellings are large huts, seldom more than two ells above the surface of the ground; the roof is covered with turf, and the entrance is dug narrow and winding under ground. These wintry mansions are extremely warm, but stink intolerably, from the number of persons generally confined in them. Their summer habitations are light tents, made of the smooth skins of the dog-fish. The occupation of the men is chiefly fishing and hunting, for which they have very curious tackle and instruments. The boats, in which

the men only row out to sea, are made of very thin, narrow boards, fastened together with whalebone, and covered with seal-skins. Only one man goes out in one of these boats, who is half covered, and so securely laced in, that the water cannot penetrate into the boat; thus equipped, he will row 60 or 70 miles in a day, though he has but one oar, which is 6 or 7 feet long, and flat at both ends. Their chief commodities are blubber and whalebone, the horn of the sea-unicorn, and the skins of deer, foxes, and the dog-fish. They neither use nor have any knowledge of money, but they fix a certain value on iron. The original inhabitants, on the first arrival of the Norwegians, in 1023, were savages, apparently of American extraction. Since the middle of the last century, the Danes have settled several colonies along the coast, and at present claim the sovereignty of the country. There is a company established at Copenhagen, which sends 3 or 4 ships every year to Greenland. The animals are deer, bears, foxes, wild fowls; and, in the water, whales and seals.

GRE'ENLY, *ad.* with a greenish colour; newly; freshly; immaturely; wanly.

GRE'ENNESS, *s.* the quality of being green; viridity; immaturity; unripeness; freshness; vigour; newness; also rawness, unskilfulness, and imperfection in trade, art, science, &c.

GRE'ENOCK, a sea-port town in the county of Renfrew, situated at the mouth of the Clyde, 18 miles W. of Glasgow. It has a considerable foreign trade, and a share in the herring-fishery. The town has increased prodigiously within the last 30 years, and is still rapidly improving. Here is a sugar-house, and a rope and sail manufactory. Lat. 55. 54. N. lon. 4. 29. W.

GUADALOUPE, one of the Leeward Islands in the West Indies, lying between Antigua and Dominica, in lat. 16. 20. N. lon. 62. 0. W. and subject to the French. It is about 250 miles in circumference, and is divided into two parts by a channel, in one place 4 miles over, and navigable only for canoes, called Riviére Sale. By this strait, the sea on the N. W. communicates with that on the S. E. The N. W. part is divided into Basseterre and Cabesterre. The S. E. part is named Grandeterre; it does not, however, contain more land than the former, but its shape is more irregular. The soil is exceedingly good, and every where well watered, especially in the district of Cabesterre. On the top of a very lofty mountain, is a volcano, called La Souffriere, the two mouths of which open into a pit of sulphur. The negroes get brimstone here, which they afterwards purify and sell. The vegetables, fruits, and trees, are much the same as in the other islands, except the cinnamon-tree, balsam of the capivi, and the milk shrub, which yields a balsamic liquor like milk. The bees here are without stings; their honey never hardens, but is always of the consistence of oil. In 1775, the exports were 188,886 quintals of sugar, 63,029 of coffee, 1438 of indigo, 1024 of cacao, and 5,193 of cotton; besides hides, and other articles, and without including the barter with Martinico, and other islands.

To GUIDE, (the *u* in this word and its derivatives is usually dropt in pronunciation, and the *g* before *i* pron. hard, as *gīde, gīder*, &c.) *v. a.* [*guider*, Fr.] to direct or shew a person a way; to govern, direct, instruct, regulate, or superintend by counsel, or exertion of authority.

GUIDE, *s.* [*guide*, Fr.] one who directs another in his way; a director.

GUIDELESS, *a.* without a guide.

GUIDER, *s.* a director; a guide.

GUIENNE, a ci-devant province of France, very fruitful, and producing great quantities of wine. It was about 160 miles in length, and 85 in breadth, having Bourdeaux for its capital. The word *Guienne* is a corruption of *Aquitaine*, an antient country of great extent, said by Cæsar to be separated from the rest of Gaul by the river Garonne.

GUILD, (sometimes pronounced *gĭld*, and sometimes *gīld*, with the *g* hard) *s.* [*gildscip*, Sax.] a society, corporation, fraternity, or company, united together by orders and laws made among themselves by their prince's licence. Hence *Guildhall*, a place or hall belonging to a corporation, wherein affairs relating to the members in their united capacity are transacted.

GUILE, (usually pronounced, as well as its derivatives, *gīle*, with the *g* hard) *s.* [*guille*, old Fr.] low cunning or craft, whereby a person tricks or cheats another; deceit.

GUILEFUL, *a.* full of deceit; wily; fraudulent; treacherous; secretly mischievous; imposing, or over-reaching a person in a crafty or fraudulent manner.

GUILER, *s.* one that betrays another into danger by deceitful means. Not in use.

GUILFORD, an antient town of Surry, noted formerly for its manufactory of cloth, of which there are still some small remains. It has a number of good inns, with excellent accommodations, being a great throroughfare on the road from London to Portsmouth. The summer assizes are held alternately here and at Croydon. It is seated on the declivity of a hill, on the river Wey, which is navigable to the Thames, and by which a great quantity of timber is carried to London, not only from the neighbourhood, but from Sussex and Hampshire woods, above 30 miles off, 17 miles S. W. of Kingston, and 30 S. W. of London. Market (chiefly for corn) on Saturday.

GUILLOTINE, *s.* an instrument for beheading, introduced into France soon after the revolution. Innumerable multitudes have suffered death by it in that country. A similar machine once existed in England, and in Scotland, called the Maiden. The name Guillotine is derived from Guillot, the name of the person who brought it into use in Paris.

GUILT, (pronounced, with its derivatives, *gĭlt*, with the *g* hard) *s.* [*gilt*, Sax.] the state of a person justly charged with a crime; a consciousness of having done amiss. Figuratively, a crime or offence.

GUINEA, (pronounced *gĭnny*, with the *g* hard; so called from Guinea, in Africa, from whence the gold was brought of which they were at first formed; on which account they likewise bore the impression of an elephant) *s.* a gold coin struck and current in England. When it was first struck, it was valued at twenty shillings; but gold growing scarce, it was advanced to twenty-one shillings and sixpence; but is now sunk to twenty-one shillings. The pound troy is cut into twenty-four parts and a half, each part making a guinea.

GUINEA, a country of Africa, of which little is known except the coast, thence called the Coast of Guinea. It is divided into the Lower and the Upper. The lower part is commonly called Congo. The Upper comprehends the districts of Sierra Leone; the Grain Coast, or Malagnetta; the Tooth Coast; the Gold Coast; the Slave Coast; and Benin. It is unhealthy for Europeans, though the natives live to a considerable age. The latter in general go almost naked; and are said to be an innocent, inoffensive, and hospitable people, except such as have been corrupted by the Europeans. These have factories on the coast, and promote feuds, frauds, and civil wars among the natives, by every means of seduction, kidnapping, and coercion, that they may get the prisoners to carry off as slaves. Two or three European settlements are at length formed in Guinea, under the governments of Great Britain and Denmark, for the purpose of carrying on an honest and advantageous trade with the natives, and for promoting their civilization. The productions of this country are the variety of rich tropical fruits, gums, hard woods, grain, gold, ivory, wax, &c.

GUINEA, NEW, a long, narrow island, of the South Pacific Ocean, N. of New Holland, from which it is separated by Endeavour Strait. This strait is about 10 leagues long and 5 broad, except at the N. E. entrance, where it is contracted by a group of islands, called the Prince of Wales's Islands. New Guinea extends from near the equator to 12 deg. S. lat. and from 131 to 153 deg. E. lon. The land is in general low, and covered with an astonishing luxuriance of wood and herbage. Most of the trees, shrubs, and plants, that are common in the South Sea Islands, are found here in the greatest perfection. The inhabitants resemble the New Hollanders.

GUINEAHEN, *s.* a fowl, supposed to be of Guinea.

GUINEAPEPPER, *s.* the capsicum, a plant.

GUINEAPIG, (*gĭnny-pig*, with the *g* hard) *s.* a small variegated animal, with a pig's snout, rat's ears, and without a tail.

To GYVE, *v. a.* to fetter or shackle; to ensnare.

H.

HIS the eighth letter, and sixth consonant, in our alphabet. Some grammarians indeed will have it to be only an aspiration or breathing; but it is most certainly a distinct sound, and formed in a peculiar manner by the organs of speech, at least in our language. It is pronounced by a strong expiration of the breath between the lips, closing, as it were, by a gentle motion of the lower jaw to the upper, and the tongue nearly approaching the palate. That it is a distinct letter, appears from the words *eat* and *heat*, *arm* and *harm*, *ear* and *hear*, *ell* and *hell*, as pronounced with or without the *h*. In English, it is scarcely ever mute in the beginning of a word, especially where it precedes a vowel; when it is followed by a consonant, it has no sound, as in *sight*; when it has *e* before it, it is sometimes dropped, the *c* being pronounced hard, like a *k*, as in *Christ*, which the Saxons wrote *Crist*, and in *echo*; but this does not hold good always, for it is pronounced in *charity*, *church*, &c. Whenever it follows *p*, it is sounded together with it like an *f*; as *Philip*, &c. Among the antients it was a numeral letter, signifying 200; and when with a mark over it thus h̄, 2000. In abreviatures, it it used for *homo*, as *J. H. S. Jesus Hominum Salvator*, i. e. Jesus the Saviour of mankind.

HA, *interject.* [Lat.] an expression of wonder or surprise. When repeated, an expression of laughter or joy.

HABAKKUK, the propheey of, is one of the canonical books of the Old Testament. There is no mention made in scripture, either of the time when this prophet lived, or of the parents from whom he descended; but according to the authors of the lives of the prophets, he was of the tribe of Simeon, and a native of Bethzair.

HABEAS CO'RPUS, *s.* [Lat.] in law, a writ which a man may have out of the King's Bench, to remove himself thither at his own expense, to answer at the bar there, when indicted or imprisoned for a crime before justices of the peace, or a franchise court, after having offered sufficient bail, which is refused, though the case be bailable.

HAGIO'GRAPHER, (*hagiógrafer*) *s.* [from *agios*, holy, and *grapho*, to write, Gr.] an inspired writer.

HAGUE, (*Hāg*) a town of the United Provinces, in Holland, which geographers pretend is but a village, and yet it may compare with the handsomest towns or cities in Europe, with regard to its extent, the number and beauty of its palaces, its streets, its agreeable walks, and its great trade, especially in books. The greatest part of the houses have the appearance of palaces, and there are at least 4000 gardens. It is seated 4 miles from the sea, and there is a pavement across the Downs, with trees on each side. The stadtholder, or governor of the country, generally resided here. It is the place where the States of the United Provinces assemble, and here the foreign ministers are admitted to audience; and here also the supreme courts of justice are held. In January 1795, the French army entering the United States, the stadtholder and family were obliged to make their escape, and the Dutch having welcomed their conquerors, an entire revolution of government took place. See HOLLAND. The Dutch were induced immediately to join the French in the war against Great Britain. It is 3 miles N. W. of Delft, 8 S. W. of Leyden, 16 N. W. of Rotterdam, and 30 S. W. of Amsterdam. Lon. 4. 10. E. lat. 52. 4. N

HAIL, *s.* [*hagel*, Sax.] a concretion of aqueous particles, or drops of rain congealed into ice. This happens, when, in their passage through the inferior air, they meet with nitrous particles, which are known to contribute greatly to freezing. Their magnitude is owing to a fresh accession of matter as they pass along. Hence we see the reason why hail is so frequent in summer, because at that time greater quantities of nitre are exhaled from the earth, and float up and down the air.

To HAIL, *v. n.* to pour down hail.

HAIL, *interject.* [from *hoel*, Sax.] a term of salutation, wherein we wish health to a person. It is used at present only in poetry.

HA'MBURGH, one of the largest towns in Germany, the births and burials amounting to about 5000 persons every

year. The antient town itself is pretty large; to which they have added the new town, almost as big as the former. Most of the houses are new, built after the manner of the Dutch, and richly furnished within. The principal streets of the antient town have long and broad canals, which are filled twice every 24 hours by the tides. These are not only useful for trade, but serve to keep the houses and the streets clean. Hamburgh is well fortified, and there is always a sufficient garrison to defend it, with a fine train of artillery. On the ramparts are handsome walks, on which they take the air in fine weather. The burghers mount guard themselves, and are divided into several companies. The streets are well lighted every night, and there is a guard which patrols all over the city. It is a place of great trade; which they carry on with Portugal, Spain, France, England, Denmark, Norway, Sweden, Italy, and Russia. The senate of this town, which acknowledges no superior jurisdiction, is composed of thirty-six persons. The town is divided into five parishes, and out of each are formed several colleges, or companies, who take care of public affairs, unless there is any thing too high for their determination, and then it is judged by a sort of general assembly. The inhabitants are all Lutherans, and none but the English have the liberty of performing divine service in a chapel of their own. Other religions are tolerated at Altona, (which is a large town near the harbour of Hamburgh) except the Jews, who have no synagogue. It is advantageously situated on the north bank of the Elbe, 45 miles N. W. of Lunenburg, 60 S. of Sleswick, and 55 N. E. of Bremen. Lon. 9. 53. E. lat. 53. 43. N.

HANS TOWNS, or HANSEATIC UNION, a name given to a confederacy of several sea-ports of Europe, which formed, at the time, the principal part of the commerce of Europe. This association extended from the North Seas and the Baltic, along the whole coast of Europe, to Messina in

the Mediterranean, and included in it cities of Poland, Norway, Germany, Holland, England, France, Spain, Portugal, and the different states of Italy. The design of this association, was, at first, their common defence against the pirates, who were numerous in the North Seas and the Baltic; for a time they were much encouraged by the different governments of Europe, and had considerable privileges granted them. In the year 1200, there were seventy-two cities in the list of Hans Towns; and so powerful was this alliance, that their ships were often hired by different princes to assist them against their enemies; at length, they grew so formidable, particularly from the 14th to the 16th century, as to give umbrage to several princes, who commanded all the different cities within their jurisdiction to withdraw from the union. This immediately separated the cities of England, France, Spain, and Italy, from the Hans. These, on the other hand, excluded several others, and put themselves under the protection of the empire, making a decree that none should be admitted into their society but such cities as stood within the limits of the German empire. For awhile the confederacy was thus continued where it had first begun, but was at length reduced to Bremen, Lubeck, Hamburgh, and Dantzick, each of which cities afterwards carried on a separate trade for herself.

HARDHE'ARTEDNESS, *s.* the quality of being insensible to the cries of misery, and unmoved at the sight of wretchedness.

HA'RDICANUTE, was at Bruges with his mother when Harold died, consulting about measures to recover the crown of Wessex; and, upon the news of his brother's death, he came over into England with 40 Danish ships, and was unanimously acknowledged king of England. Immediately after he was crowned, he caused the body of his brother to be dug up, and flung into the Thames, which being found by some fishermen, they gave it to the Danes, who deposited it in their burial place at London, at this day called St. Clement's Danes. Soon after he laid a heavy tax on the nation for paying his fleet, which he sent back to Denmark. This occasioned great murmuring and discontent among the people. At Worcester the tax was opposed with the utmost

violence, and two of the persons employed to collect it were killed; this so enraged the king, that he sent the dukes of Wessex and Mercia, and the earl of Northumberland, with their forces, against Worcester; who after plundering the city for four days, burnt it to the ground. Hardicanute, who was infamous for gluttony and drunkenness, as well as for cruelty, died suddenly as he was carousing at the wedding of a Danish lord at Lambeth. He died unlamented by all; and the English, we are told, kept the day of his death, June 8, as a holiday for some centuries after, by the name of Hoc-tide, or Hog's-tide. He died in 1041, and in the third year of his reign. With him ended the monarchy of the Danes in England, after it had lasted about 26 years, but after they had harassed the kingdom 240 years. In these times we are told that a Dane would often stab an Englishman as he was drinking, so that, at length, no one would drink in the presence of a Dane, without having somebody to be his pledge or security; whence, it is said, our custom of pledging one another took its rise.

HA'RDIMENT, *s.* [*hardiment*, Fr.] courage; bravery. Not in use.

HA'RDINESS, *s.* [*hardiesse*, Fr.] hardship, or fatigue; courage, or a disposition of mind insensible to danger; effrontery; impudence.

HARK! *interject.* list, or listen; be attentive to hear; used on a sudden apprehension of danger, &c.

HARL, *s.* [*heorda*, Sax.] the filaments or threads of flax; any substance consisting of threads or filaments.

HA'RLECH, a mean town of Merionethshire, but naturally strong, being seated on a rock, on the sea shore. It is chiefly remarkable for its castle, built by Edward I. which is still almost entire. Near it is a cataract of the Rhais Du, which rushes down a mountain, for above 100 yards, and then forms a cascade, part of an elliptical curve, to a pool 40 feet below. Harlech is the county town, and is 24 miles S. of Carnarvon, and 223 W. N. W. of London. Market on Saturday.

HA'RLEM, a large, rich, and handsome town, of the United Provinces, in Holland, containing about 40,000 inhabitants. It is noted for its church, which is the largest in Holland, and in which is a remarkable fine organ, that consists of 8000 pipes; the largest is 38 feet long, and 16 inches in diameter, and there are 68 stops, of which the most wonderful is the *vox humana*. To the S. of the town is a wood, cut out into delightful walks and vistas. Here are considerable manufactures in linen, ribands, and tapes; and they export great quantities of beer. It is situated on the river Sparen, about a league from the sea, and 10 miles W. of Amsterdam.

HA'RLEQUIN, *s.* a person dressed in a motley-coloured jacket and trowsers; the hero in pantomime entertainments, who diverts the populace by his activity, artifices to extricate himself from danger, and his seeming power in enchantments and metamorphoses.

HA'RLESTON, a town of Norfolk, seated near the river Waveny, 18 miles S. of Norwich, and 100 N. E. of London. It has a good market on Wednesday.

HA'RLING, EAST, a pretty, neat, genteel town of Norfolk, seated on a rivulet between Thetford and Buckenham, 21 miles S. W. of Norwich, and 88 N. E. of London. Its market on Thursday, is chiefly for linen-yarn and linen cloth.

HA'RLOT, *s.* [*herlodes*, B. lit.] a female that is unchaste.

HA'RLOTRY, *s.* an habitual practice of unchasteness, applied to a woman. Used as a term of contempt for a woman.

HA'RLOW, a town of Essex, chiefly noted for its annual fair, on a common, about 2 miles from the town, much frequented for horses, hogs, and cows, on Sept. 9. It is called Harlow Bush Fair. It has another fair on Nov. 8. Harlow is situated on the W. side of the Rodings, about 17 miles W. of Chelmsford, and 23 N. E. of London.

HARM, *s.* [*hearm*, Sax.] an action by which another person may receive damage in his goods, or hurt in his person; mischief; hurt; or injury. SYNON. *Harm* particularly relates to any ill done a man's person or character, and is inferior in degree to *hurt*, which includes a great degree of harm. *Mischief* implies ill done either to person or property with an evil intent; *injury*, a degree of hurt without justice, and refers either to character or property. *Detriment* includes an idea of loss, and is seldom used but when speaking of property.

To HARM, *v. a.* to damage the goods or fortune of another, or to hurt his person.

HARMA'TTAN, *s.* the name of a remarkable periodical wind, which blows from the interior parts of Africa towards the Atlantic ocean. It is attended with fog, extreme dryness, and yet great salubrity.

HA'RMFUL, *a.* hurtful; injurious; detrimental; mischievous.

HA'RMFULLY, *ad.* in such a manner as to produce mischief, hurt, or damage.

HA'RMFULNESS, *s.* the quality which renders a thing or person detrimental to the interest, hurtful to the person, or injurious to the character, of another.

HA'RMLESS, *a.* without hurt; without intending or causing any mischief; without being damaged; innocent.

HA'RMLESSLY, *ad.* innocently; without malice or crime.

HA'RMLESSNESS, *s.* the quality of a thing or person which can affect another with no damage or hurt.

HARMO'NIC, or HARMO'NICAL, *a.* [*harmonikos*, from *harmozo*, to agree, Gr.] proportioned, or adapted to each other; musical.

HARMO'NICA, *s.* a musical instrument invented by Dr. Franklin, in which the music is performed by glasses, filled with water according to the tone to be produced; but machinery has since been added, to produce the effect in the manner of an organ.

HARMO'NICS, *s.* that part of music which considers the differences and proportions of sounds with respect to acute and grave; in contradistinction to rythmica and metrica.

HARMO'NIOUS, *a.* [*harmonieux*, Fr.] adapted to, or having the parts proportioned to, each other. In music, having sounds that are concords to each other; musical, or affecting the ear with an agreeable sensation.

HARMO'NIOUSLY, *ad.* with a just proportion of parts to each other; in such a manner as to delight the ear.

HARMO'NIOUSNESS, *s.* that quality which renders sounds agreeable and delightful; proportion of parts.

To HA'RMONIZE, *v. a.* to agree with respect to proportion. To make musical, or convey delight to the ear, applied to sound.

HA'RMONY, *s.* [*harmonia*, from *harmozo*, to agree, Gr.] in music, is the agreeable result or union of several musical sounds heard at one and the same time; or the mixture of divers sounds, which together have an effect agreeable to the ear. *Harmony* likewise denotes an agreement, suitableness, union, conformity, &c. Thus, in music, we sometimes apply it to a single voice, when sonorous, clear, and soft; to a single instrument, when it yields a very agreeable sound. In matters of literature, we use it for a certain agreement between the several parts of a discourse. In architecture, it denotes an agreeable relation between the parts of a building. In painting, they speak of it both in the ordonnance and composition, and in the colours of a picture; in the ordonnance, it signifies the union or connection between the figures, with respect to the subject of the piece; in the colours, it denotes the union, or agreeable mixture of different colours.

HA'RNESS, *s.* [*harnois*, Fr.] in its primary sense, armour for a horse; the traces by which horses are fastened to carriages of pleasure or state; that of other horses is called *geer*.

To HA'RNESS, *v. a.* to dress in armour; to fix horses in their traces; or to put traces on a horse.

HA'ROLD, surnamed Harefoot, the son of Canute, king of England, ascended the throne upon the death of his father, being supported by the Danes, who were resolved to stand by Canute's will, by which he had left the kingdom of England to Harold. He immediately seized upon the treasure which his father had laid up at Winchester. This enabled him to gain over several of his opposers; and, at a general assembly of the whole nation, held in Mercia, viz. at Oxford, having got a majority of voices, he was proclaimed king of England, Hardicanute being then in Denmark. In the mean time the West Saxons returning home, dissatisfied with his choice, Hardicanute was, by the management of earl Goodwin, proclaimed king of Wessex, without any further interfering with what had been done in Mercia. By Wessex we are to understand all the country south of the Thames, and by Mercia, all north of it. In Hardicanute's absence, Goodwin managed all in Wessex. Harold, seeing he could not obtain his end by force of arms, endeavoured to bring him over by fair means, and so managed his matters, that Goodwin on a sudden became his friend; and, under pretence that Hardicanute neglected to come into England, got Harold to be acknowledged king of Wessex with all the ease imaginable, and now he was in reality king of all England. He died without issue, 1039, in the 4th year of his reign. He laid a tax of 8 marks on every port, towards fitting out 16 ships; and made a law, that if any Welshman, coming into England without leave, should be taken on this side Offa's ditch, his right hand should be cut off.

HA'ROLD II. son of earl Goodwin, succeeded Edward the Confessor, 1065, and had all the qualifications requisite to the forming a great prince. He lessened the taxes, and caused justice to be impartially administered. The duke of Normandy having long entertained thoughts of succeeding to the crown of England upon Edward's death, being moved thereto either by the verbal promise or will of that prince, but much more by his own ambition, was enraged that Harold, had, contrary to his oath, set himself up for king. But Harold now met with great uneasiness from his brother Toston, who was endeavouring to dethrone him, and, being assisted by the earl of Flanders, greatly infested the English coasts. However, an army being sent against him, he was obliged to return to his ships, and was driven on the coasts of Norway, and there met with what he desired. He persuaded Harfagar, king of Norway, to join with him, and they entered the Tyne with 500 ships, landed and ravaged the country, and took York. Harold came up with them at Stamford bridge on the Derwent. They were posted on the other side of the bridge, so that Harold could not come at them without first making himself master of the bridge, which the Norwayans bravely defended, being encouraged by one man, who alone defended the bridge for no small time against the whole English army; but at last, he being slain, after he had, as it is said, killed 40 men with his own hands, Harold became master of the bridge, and led his army over; and now a very obstinate and bloody battle was fought between two numerous armies, no less than 60,000 of a side, which lasted from seven in the morning to three in the afternoon; and at length Harold gained a complete victory, Harfagar and Toston being both slain. But Harold, whether to ease the people of expence, or for whatever reason it was, kept the spoils to himself, which raised such discontents in the army, as proved detrimental to his affairs afterwards. William, duke of Normandy, had, soon after Edward's death, sent ambassadors to Harold, requiring him to deliver up the crown, and, in case of refusal, to charge him with a breach of his oath, and to declare war against him. Harold returned for answer, that the duke had no right to the crown, that the oath was extorted from him, was therefore null and void, and that he would defend his own right against all opposers. The duke of Normandy got the pope's approbation of his design, who sent him a consecrated banner, with a golden Agnus Dei, and one of St. Peter's hairs. Harold had equipped a large fleet, and raised a numerous army, which, after waiting a great while for the duke, he had given orders for the disbanding, just before he heard of Harfagar and Toston's invasion. The duke landed at Pevensey, in Sussex, Sept. 29, 1066, and built a fort there; and then marched along the shore as far as Hastings, where he built another strong fort, and waited for the coming of the enemy. Harold was still in the north, not expecting their coming till the spring: but as soon as he was informed of their arrival, he marched with the utmost expedition to London, where the nobility came in to him, promising their assistance; but he found his army much diminished by the losses at Stamford bridge, and multitudes deserting through discontent. However, having drawn all his forces together, he marched, and encamped about seven miles from the Norman army, resolving to give them battle. The English spent the night in singing and carousing, as if sure of the victory; and the Normans, in preparing for the fight, and praying to God for success. On Oct. 17, the two armies engaged; the battle began with great fury, and equal bravery on both sides. The English were at first very much annoyed by the long bows of the Normans, a way of fighting they had not been used to, which put them in some disorder; but recovering themselves, they so warmly engaged the Normans, that they

were forced to give back a little, who, renewing the attack, met with as vigorous a resistance as before, the English having much the advantage of them with their bills, which were their antient weapons; nor was it in the power of the Normans to break their ranks, which remained impenetrable, till the duke thought of a stratagem, which was, for his men to retreat as they were fighting, as if they were about to fly. This emboldened the English to press upon their retiring enemy, and in their eagerness they broke their ranks; and then the Normans fell on the disordered English, and made a terrible slaughter of them. However, Harold rallied his troops, and the English killed great numbers of the Normans, and preserved their ranks. The battle had lasted from seven in the morning, and night now drew on, whilst victory yet seemed to remain in suspense. But the duke had a mind to make one push more before it was dark, to drive the English from their station. In this fatal attack Harold was slain by an arrow shot into his brain; at which the English being quite dismayed, betook themselves to flight, and the Normans obtained a complete victory. Thus fell the brave Harold in his country's cause, after a turbulent reign of 9 months and 9 days; and with him totally ended the empire of the Anglo-Saxons in England, which had begun in the person of Hengist, above 600 years before.

HARP, *s.* [*hearp*, Sax.] a musical instrument strung with wire and struck with the finger. In astronomy, the name of a constellation.

To HARP, *v. n.* [*harper*, Fr.] to play on the harp. Figuratively, to touch any particular passion; to dwell on a subject.

HART, *s.* [*heort*, Sax.] a male of the deer kind, the female of which is a hind or roe.

HA'RTCLOVER, *s.* a kind of trefoil.

HA'RTFORD, and not HERTFORD, (if its origin be derived from a hart, the arms of the place, deer being formerly very numerous in this part of the country,) is the shire-town of the county, and hundred of the same name, in England. It has a market on Saturday, is seated on the river Lea, and has been much more considerable than it is at present; for it is much decayed since the great road was turned through Ware. However, it is still the place where the assizes are held, and has the title of an earldom; sends two members to parliament; and is 21 miles N. of London.

HA'RTFORDSHIRE, an English county, 31 miles in length, and 28 in breadth; it is bounded on the E. by Essex, on the W. by Buckinghamshire, on the N. by Cambridgeshire and Bedfordshire, and on the S. by Middlesex. It contains eight market-towns, whereof only two send members to parliament, namely, Hartford and St. Alban's. It abounds in corn, river-fish, sheep, and fat cattle; and the air is good all over the county. The principal rivers are, the Lea, the Coln, and the Hunton. Hartford is the capital town.

HA'RTLAND, a town in Devonshire, partly concerned in the herring fishery on this coast. It is seated on the Bristol Channel, near a promontory called Hartland Point, 28 miles W. of Barnstaple, and 218 W. by S. of London. Market on Saturday.

HA'RTLEPOOL, a pretty large sea-port town of the county of Durham, seated on a promontory, partly surrounded by rocks and hills, and partly by the sea. It has a safe harbour, where the Newcastle and Sunderland colliers generally take shelter in stress of weather. It has a considerable fishery on the coast, and they export a good deal of coals and lime. It is 16 miles S. E. of Durham, and 254 N. by W. of London. Its market, on Saturday, is much decayed.

HA'RTLEY, Northumberland, on the coast N. of Tinmouth. Here are salt, copperas, and glass-works; and here is a pretty haven, or harbour, to which a canal has been cut, through a solid rock, 52 feet deep, 30 broad, and 900 long. The exports from this place, in 1776, were 70,000 dozen of bottles, 3000 tons of salt, 100 tons of copperas manufactured here, and 18,000 chaldrons of coals.

HA'RTROYAL, *s.* a plant; a species of buckthorn plaintain.

HA'RTSHORN, *s.* in medicine, the horn of a hart, called the red deer. Its salt is used as a sudorific; its spirit has all the virtues of volatile alkalis; and they are both used for bringing people out of fits, by being applied to the nose. The raspings are, by boiling in water, formed into jellies for consumptive people; and the bone, being calcined and powdered, is used to absorb acidities in the stomach, and as drink, when boiled, in diarrhœas.

HA'RTWORT, *s.* in botany, an umbelliferous plant, of which there are two kinds; found in hedges and cornfields.

HA'RWICH, a sea-port town of Essex, seated on a tongue or point of land, opposite to the united mouths of the Stour and Orwell, 42 miles E. by N. of Chelmsford, and 72 N. E. of London. It is not very large, but is well inhabited and frequented, and here the packet boats are stationed that sail to Helvoetsluys, regularly every Wednesday and Saturday, if wind and weather do not prevent, in time of peace. It has a very safe, spacious, and convenient harbour, extending from the sea to within 2 miles of Ipswich, and able to receive ships of 100 guns all the way; here is also a very good dock-yard for building ships, with the necessary storehouses, cranes, launches, &c. The washing and undermining of the tides, and the falling off of large pieces of cliff, have made the point a peninsula, and perhaps may in time make it an island. The harbour is defended by Landguard Fort, built on a sandy point on the Suffolk side of the water, and other strong works. It is a place of considerable trade, and many vessels are employed in the North Sea fishery. Lat. 52. 0. N. lon. 1. 25. E. Markets on Tuesday and Friday.

To HASH, *v. n.* [*hacher*, Fr.] to mince, or cut into small pieces. To mingle, used with *up*.

HA'STINESS, *s.* speed or expedition; a performance executed in a hurry; anger; testiness.

HA'STINGS, *s.* [corruptly for *hastive*, a French term sometimes used in English for early, forward.] The hastive fruits are strawberries and cherries; we have also hastive peas, &c.

HA'STINGS, a sea-port town of Sussex, containing 2 churches, about 600 houses, and 3000 inhabitants. It is seated between high clefts or hills, on a small stream called the Bourne, which divides it into two different parishes. The chief employment of the people is fishing. It is one of the cinque-ports, and noted for being the place where William the Conqueror landed. Near this town, in the year 1066, was fought the most memorable battle in the annals of this country, between Harold II. king of England, and William, duke of Normandy, in which the former lost his life and kingdom. Of the Normans there fell near 15,000 men, and a much greater number of the English were killed in the pursuit. Markets on Wednesday and Saturday. It is 14 miles S. W. of Rye, and 61 S. E. of London.

HA'STY, *a.* [*hastif*, Fr.] moving with swiftness; quick, or speedy. Soon provoked, applied to the temper or humour. Rash, precipitate, or undertaking without thought. Early ripe. *Hasty pudding*, a pudding made of milk and flour, or of oatmeal and water, boiled quick together. SYNON. *Hasty* relates more to action or blows: *passionate* goes seldom farther than words.

HAT, *s.* [*hat*, Sax.] a covering for the head. In botany, the upper broad part of funguses.

HA'TBAND, *s.* a string tied round a hat to keep the crown from stretching, or if too large, to make it fit the head better; a piece of silk or crape worn round the crown of a hat in mourning.

HAVANNAH, a sea-port town in the island of Cuba, situated on the N. W. part of it, opposite Florida. The harbour is capable of containing commodiously 1000 vessels, without either cable or anchor. The entrance to it is by a narrow channel, strongly fortified with platforms, works, and artillery, for at least half a mile, the length of the passage. On the E. side of the mouth of the channel is the famous Moro Fort, mounted with 40 pieces of cannon, almost level with the water; and on the opposite side a strong fort, called the Puntal, adjoining to the town. All the ships that come from the Spanish American settlements, rendezvous here on their return to Spain. In 1700 the town was computed to contain 20,000 inhabitants, Spaniards, mulattoes, and negroes; the number of which have been considerably increased since. The houses are elegant, built of stone, and some of them superbly finished; and the churches, and other public buildings, are rich and magnificent. Provisions here are extravagantly dear; neither is their fresh meat of the best kinds, excepting their pork. This inconvenience is not owing to any defect in the soil of the island, but to the indolence of the Spaniards. In 1762, the Havannah was taken by an English squadron and army, under Sir G. Pocock and lord Albemarle. The Moro Fort was taken by storm, after a siege of 29 days. Twelve men of war and three frigates were taken at the same time with the town. It was restored, however, by the peace of 1763. Lat. 23. 12. N. lon. 82. 9. W.

HEART, (the *e* in this word, as well as in all its compounds and derivatives, is dropped in pronunciation; as, *hart*, *hárt-ach*, *hárty*, &c.) *s.* [*heort*, Sax.] a musculous body, situated on the left side of an animal, which by its alternate contraction and dilation, keeps up the circulation of the blood, and is considered as the cause of vital heat or motion. The following description of the heart is copied from Paley's Natural Theology. "There is provided in the central part of the body, a hollow muscle invested with spiral tubes, running in both directions. By the contraction of these fibres, the sides of the muscular cavities are necessarily squeezed together, so as to force out from them any fluid which they may at that time contain; by the relaxation of the same fibres, the cavities are, in their turn, dilated, and, of course, prepared to admit every fluid which may be poured into them. Into these cavities are inserted the great trunks, both of the arteries which carry out the blood, and of the veins which bring it back." This is a general account of the apparatus; and the simplest idea of its action is, that by each contraction, a portion of blood is forced, as by a syringe, into the arteries; and at each dilation, an equal portion is received from the veins. This produces, at each pulse, a motion and change in the mass of blood, to the amount of what the cavity contains, which, in a full-grown human heart, is about an ounce, or two table spoonfulls. Each ventricle will at least contain one ounce of blood. The heart contracts four thousand times in one hour; from which it follows, that there passes through the heart every hour, four thousand ounces, or 350lbs. of blood. Now the whole mass of blood is about 25lbs. so that a quantity of blood, equal to the whole blood within the body, passes through the heart fourteen times in one hour; which is about once every four minutes. In popular and scripture language, it is taken for the seat of courage or affection. Figuratively, the chief or principal part; the inner part of any thing. Passions; anxiety; concern. Disposition of mind. The *heart* is considered as the seat of tenderness; a *hard heart*, therefore, is cruelty. Courage or spirit, opposed to *despair* or dejection. Used with *get*, *deliver*, or *say*, strength of memory. The inward recesses of the heart. The mind or conscience. Strength, or power of producing, applied to soil. *To lose one's heart*, is to be very much enamoured, or to fall so deeply in love, that reason cannot control the affection. *To take to heart*, is to be zealous, earnest, solicitous, or grieved about any thing. *To find in the heart*, is not to be entirely, or much averse to. *Heart* is often used, in composition, for the mind, soul, or affection.

Applied to the mind, dejection; depression; languor; inaptitude to motion or thought; oppression. Deepness or richness of soil; SYNON. *Heaviness* is that quality in a body which we feel and distinguish by itself; *weight* is the measure or degree of that quality, which we cannot ascertain but by comparison.

HEA'VY, (*hévy*) *a.* [*heafig*, Sax.] not easily lifted, or thrown upwards; weighing much, or tending to the centre. Sorrowful; dejected. Grievous, or oppressive. Wanting briskness, or dull, applied to the eyes; lazy; drowsy; slow; sluggish; stupid; foolish. Wanting fire, spirit, or the ornaments of composition, applied to style. Tedious, or oppressing like a burden, applied to time. Causing a sensation of weight, and not easily digested, applied to food. SYNON. *Heavy* is more applicable to that which loads the body; *weighty*, to that which burdens the mind.

HEBDOMA'D, *s.* [*hebdomas*, from *hepta*, seven, Gr.] a week, or space of time consisting of seven days.

HEBDOMADEL, or HEBDOMADARY, [*hebdomas*, from *hepta*, seven, Gr.] weekly; consisting of seven days.

To HE'BETATE, *v. a.* [from *hebes*, dull, Lat.] to dull; to blunt; to stupify; to make dim.

HE'BETUDE, *s.* [from *hebes*, dull, Lat.] dulness; bluntness; obtuseness; want of discernment or sagacity.

HE'BRAISM, *s.* [*hebraismus*, Lat. from *hebrazo*, to conform to the manners of the Hebrews, Gr.] a method of expression, or a phrase borrowed from, or peculiar to, the Hebrew.

HE'BRAIST, or HEBRI'CIAN, *s.* a person skilled in Hebrew.

HE'BREW, *i. e. language*, *s.* the language in which the Old Testament was originally written. There is no other book in pure Hebrew, as the writings of the Rabbins are

interlarded with words of foreign extraction. A Hebrew seems to have been one of the descendants of Terah, so called from a Hebrew word that signifies to pass over, because they came from beyond the Euphrates.

HE'BRIDES, or WESTERN ISLANDS OF SCOTLAND. These islands lie between the 55th and 59th degrees of N. lat. on the W. coast of Scotland, and are supposed to be about 300 in number. The principal of them are Skye, St. Kilda, Lewis, and Harris, N. and S. Uist, Cannay, Staffa, Mull, Jura, Islay, &c.

HE'BRIDES, New, a group of islands in the S. Pacific Ocean, situated between the latitudes of 14. 29. and 20. 4. S. and between the longitudes of 166. 41. and 170. 21. E. The principal islands are Tierra del Espirito, Santo, and Malicollo, besides several others of less note, some of which are from 18 to 25 leagues in circumference. In general they are high and mountainous, abounding with wood and water, and the usual productions of the tropical islands. The bread-fruit, cocoa-nuts, and plantains, are neither so good nor so plentiful here as at Otaheite; but the sugar-canes and yams are not only in greater plenty, but of superior quality and much larger, some of the latter weighing 56 pounds. The inhabitants are generally of a slender make, and dark colour, and most of them have frizzled hair. Their canoes and houses are but small, and poorly constructed; and they have scarcely any manufacture, even for clothing. They generally appear civil and hospitable.

HE'CATOMB, (*hécatōm*) *s.* [from *hekaton*, an hundred, Gr. *hecatombe*, Lat.] a sacrifice of an hundred cattle.

HECTIC, or HE'CTICAL, *a.* [*hektikos*, from *hexos*, a quality which cannot be easily separated from its subject, Gr.] habitual; constitutional. *Hectic fever*, a slow and continual one, ending in a consumption, and opposed to such as arise from a plethora, because attended with a too lax state of the excretory passages, and generally those of the skin. Troubled with a distempered heat.

HE'CTOR, *s.* [from *Hector*, the Trojan hero] a bully; a blustering, noisy, and turbulent person.

To HE'CTOR, *v. n.* to threaten; to treat with insolence; to play the bully.

HEDERA'CEOUS, *a.* [*hederaceus*, from *hedera*, ivy, Lat.] producing ivy.

HEDGE, *s.* [*hegge*, Sax.] a fence of trees or bushes made round any ground, to defend it from encroachments, or between the different parts of a garden, &c. When prefixed to any word, *hedge* denotes something mean, vile, and contemptible. A *quickset hedge* is that which is formed of prickly bushes or trees which take root and grow.

To HEDGE, *v. a.* to inclose with a fence of trees or bushes. Used with *up*, to obstruct or stop up a passage. To force in with difficulty; to make way into a place already full, by that way which requires the least room; but in this sense it seems to be mistaken for *edge*.

HE'DGEHOG, *s.* so called from the bristles which surround it, as it were with a hedge; in natural history, a four-footed animal, having its back, sides, and flanks, set with strong and sharp prickles, which by the help of a muscle can contract itself into a globular form, and withdraw its whole under part, head, belly, and legs, within its thicket of prickles. In botany, a plant. The globe fish.

HE'DGE-NOTE, *s.* a word of contempt for low and mean writing.

HE'DGEPIG, *s.* a young hedgehog.

HE'DGER, *s.* one who makes or repairs hedges.

HE'DGEROW, *s.* several trees planted in a line for an inclosure.

HEE'DLESSLY, *ad.* in an inattentive or careless manner.

HEE'DLESSNESS, *s.* carelessness; negligence; inattention.

HEEL, *s.* [*hele*, Sax.] the hinder part of the foot; any thing which covers, or is shaped like, a heel; hence it is applied in the phrase, *To be out of heel, i. e.* to be very much impaired, or in a declining condition. "A good man's fortune may *grow out at heels*." *Shak. To be at the heels*, is to pursue closely. *To lay by the heels*, is to fetter, shackle, or imprison.

To HEEL, *v. n.* to dance by beating the heels on the ground, as in jigs. To lean on one side, applied to a ship.

HEE'LER, *s.* a cock that strikes well with his heels.

HEE'LPIECE, (*heelpeece*) *s.* a piece of leather, &c. sewed on the heel of a shoe, to repair what is worn away.

HEFT, *s.* [from *heave*] a keck, or a violent effort made to discharge something nauseous from the stomach; the handle of a knife, &c. of *heft*, Sax.

HE'GIRA, *s.* [Arab.] flight; now applied by the Arabs, to signify a voluntary exile, or flight to escape persecution; to fly, or run away from one's friends, relations, and country. In chronology, a celebrated epocha, from whence the Mahometans compute their time; which took its origin from Mahomet's flight from Mecca, on the evening of the 15th or 16th of July, A. D. 622, in the reign of Heraclius, being driven from thence by the magistrates, for fear his imposture should occasion sedition. As the years of the Hegira consist of only 354 days, they are reduced to the Julian calendar, by multiplying the year of the Hegira by 354, dividing the product by 365, subtracting the intercalary days, or as many times as there are four years in the quotient, and adding 622 to the remainder.

HEI'DELBERG, a considerable and populous town of Germany, capital of the Palatinate, Lower Rhine, with a celebrated university. It is situated on the S. side of the Neckar, over which there is a handsome bridge, in a fertile country, 12 miles E. of Spire. Lat. 49. 26. N. lon. 8. 48. E.

To HEI'GHTEN, (*hīten*) *v. a.* to raise above ground, or on high; to prefer, or raise to a higher post; to improve, or raise to a higher degree of perfection; to aggravate, or increase any bad quality; to adorn or make more beautiful or splendid by ornaments.

HEI'NOUS, (the *ei* in this word and its derivatives is pron. like *e* long—*hēnous*) *a.* [*haineux*, Fr.] wicked in a high degree; atrocious; shameful; odious.

HEI'NOUSLY, *ad.* in a very wicked or atrocious manner.

HEI'NOUSNESS, *s.* the quality which makes an action exceedingly wicked.

HEIR, (the *ei* in this word and its derivatives, &c. is pron. like *e* long—*hēr*, *hērship*) *s.* [*hæres*, Lat.] in civil law, one who succeeds to the whole estate of another, after his death, whether by right of blood or testament. In common law, one who succeeds, by right of blood, to any man's lands or tenements in fee. An *heir apparent* is he on whom the succession is so settled, that it cannot be altered without

altering the laws of succession. *Heir presumptive* is the nearest relation to the present successor, who, without the particular will of the testator, cannot be set aside.

To HEIR, *v. a.* to inherit or possess by right of inheritance.

HEIRESS, *s.* a female who succeeds to the estate of another either by will or by blood.

HEIRLESS, *a.* without children to succeed to an inheritance.

HEIRLOOM, *s.* a word that comprehends in it divers pieces of furniture, as the first bed, and other things, which by the custom of some places have belonged to some house for several descents. These go to the heir along with the house by custom, and not by common law, and are never inventoried, after the death of the owner, as chattels.

HELD, preter. and part. pass. of HOLD.

HELENA, ST. an island in the S. Atlantic Ocean, held by the English East India Company. Its circumference is about 20 miles, and it has the appearance, at a distance, of a rock or castle rising out of the ocean, being only accessible at one particular spot, where the town is erected, in a valley at the bottom of a bay, between two steep, dreary mountains. The buildings, both public and private, are plain, but neat. It has some high mountains, particularly one called Diana's Peak, which is covered with woods to the very top. There are other hills also, which bear evident marks of a volcanic origin; and some have huge rocks of lava, and a kind of half vitrified flags. The country, however, is far from being barren; the little hills are covered with rich verdure, and interspersed with fertile valleys, which contain gardens, orchards, and various plantations. The valleys are watered by rivulets, and the mountains, in the centre of the island, are covered with wood. The soil, which covers the rocks and mountains, is, in general, a rich mould, from six to ten inches deep, clothed with a variety of plants and shrubs. The walks of peach-trees are loaded with fruit, which have a peculiarly rich flavour; but the other European fruit-trees and vines, which have been planted here, do not succeed. Cabbages and other greens, thrive extremely well, but are devoured by the caterpillars; as are the barley, and other kinds of grain, by the rats, which are very numerous. The ground, for these reasons, is laid out chiefly in pastures, the verdure of which is surprising; and the island can support 3000 head of their small cattle. They have English sheep here, and a small breed of horses, with goats and rabbits. Their fowls are ring-pheasants, red-legged partridges, rice-birds, pigeons, &c. of some of which the breed is indigenous, but others have been brought from Europe, Africa, and the East Indies. The number of inhabitants on the island does not exceed 2000, including near 500 soldiers, and about 600 slaves, who are supplied with all sorts of manufactures by the company's ships, in return for refreshments; and many of the slaves are employed in catching fish, which are very plentiful. This island is situated between the continents of Africa and S. America, about 1200 miles W. of the former, and 1800 E. of the latter. Lat. 15. 55. S. lon. 5. 49. W.

HELEN'S ST. a town of the Isle of Wight, in East Medina, which has a bay that runs a considerable way within land, and in time of war, is often the station and place of rendezvous for the royal navy. It is not now a place of much consideration otherwise.

HELIACAL, *a.* [from *helios*, the sun, Gr.] hid by or appearing by coming out of the lustre of the sun. *Heliacal rising*, in astronomy, is applied to a star, which after having been hid by the sun's rays, rises before it, and by that means becomes visible. *Heliacal setting*, is applied to a star which approaches so near to the sun, as to be hid by its rays.

HELIACALLY, *ad.* [from *helios*, the sun, Gr.] in astronomy, in such a manner as to emerge from the sun's rays, and become visible; or in such a manner as to approach so near to the sun as to be hid by its splendour.

HELIER, ST. the capital of the island of Jersey, in the English Channel, on the coast of France. It is seated in St. Aubin's Bay, where it has a harbour, and a stone pier; having the sea on the S. W. and hills on the N. Another large hill projects, in a manner, over the town, and has a pleasant walk, that affords an extensive prospect. The little island, St. Helier, about a mile in circuit, contains Elizabeth castle, which is wholly occupied by the governor and garrison; it is a peninsula from half-flood to half-ebb, during which time there is a passage, called the bridge, which is half a mile long, and formed of sand and stones. It leads to the town, which is well paved, and has wide streets. The inhabitants are computed to be 2000, and in their place of worship the French and English languages are used alternately. Lat. 49. 11. N. lon. 2. 10 W.

HENRY I. surnamed Beauclerc, youngest son of William I. ascended the throne of England while his brother Robert was returning from the Holy Land. William de Breteuil, and other lords, would have seized the crown and sceptre at Winchester, with the royal treasure there deposited, alleging they were obliged by oath to acknowledge Robert for king, in case William died without heirs, according to the treaty between the two brothers. There was quickly a great concourse of people from all parts; and Henry, well knowing how they stood affected, drew his sword, and swore no man should take possession of the crown but whom the people approved. The lords hereupon retired to a room to consult what was proper to be done, whilst the people, with loud acclamations, made the name of Henry resound in their ears; so, fearing that the opposing the inclinations of the people might bring on a civil war, they resolved that Henry should succeed to the crown. Upon this Henry made haste to London, and the next day, August 5, 1100, was crowned by Maurice, bishop of that see, who administered to him the usual oath. To secure himself on the throne, he wisely began his reign by reforming abuses, redressing grievances, and doing many popular things, according to his late promise; and granted a charter of liberties, confining the royal authority within its antient bounds, renouncing the unjust prerogatives the two late kings had usurped, restoring the church to her former rights, and confirming the laws of king Edward. He moreover remitted all arrears of debt to the crown, and appointed a standard for weights and measures throughout the kingdom. In 1101 Henry recalled Anselm, archbishop of Canterbury, and married Matilda, or Maud, daughter of Malcolm, king of Scotland, by Margaret, sister to Edgar Atheling; by which means the royal family of the Saxons was united with that of Normandy. Robert had still a great party in the kingdom for him, and upon his landing at Portsmouth was received without opposition. But Henry managed matters so well by means of Anselm, who was in great credit with the people, that Robert's measures were quite disconcerted, and matters were accommodated between them, upon condition, that, if one of the two brothers died without issue, the survivor should succeed to his dominions; that the king should deliver up to Robert the castles in Normandy that were garrisoned with English, and should pay him 3000 marks a year. In 1103 a contest began between the king and archbishop Anselm, about the right of investiture of bishops and abbots, and their doing homage to the king, which Henry insisted on as a prerogative derived from his ancestors; but a council at Rome decreed, that no bishops should receive investiture from laymen. This contest ran high, and lasted several years; at last it was compromised by Henry's renouncing the right of investiture, and the pope's allowing the bishops and abbots to do homage to the king for their temporalities. And now his attention was called to another affair. Robert de Belesme, to be revenged on the king, who had caused him to be proclaimed a traitor, fell upon such of his subjects as had lands in Normandy. Duke Robert marched against him, but was worsted, and in the end was forced to clap up a peace with him on dishonourable terms; notwithstanding which, Belesme ravaged the country; hereupon some of the chief men in Normandy applied to the king of England for relief. Henry, wanting to get this duchy into his own hands, passed over into Normandy, and had great success in his first campaign; but in his second, Robert, perceiving his design, and having in vain sued for peace, joined with Belesme and the rest against him, who led all their forces to his assistance. Robert having a considerable army, gave his brother battle under the walls of Tinchebray, which was besieged by Henry. The battle lasted not long; Robert was beaten, and taken prisoner, as were also Edgar Atheling, the earl of Mortaigne, 400 knights, and 1000 soldiers. Prince Edgar was set at liberty, and passed the remainder of his days in England. The earl of Mortaigne was imprisoned in the Tower of London, and duke Robert in Cardiffe castle, in Wales, where he remained to his death, which happened about twenty-six years after. The king, by this battle, which was fought in 1107, was master of all Normandy, and returned in triumph to England, where he behaved with great arrogance, and permitted any abuses which turned to his profit. The king did not enjoy Normandy quietly; for Lewis le Gros, king of France, invested William Crito, duke Robert's son, with the duchy of Normandy, and a smart war was carried on for some time; at last, in 1120, a peace was concluded between the two kings. But to return back; in 1109 the king's daughter, Maud, was married to the emperor Henry V. which furnished him with a pretence for laying a tax of 3*s.* on every hide of land, in order to pay her marriage portion, which raised an immense sum. About this time died that haughty prelate Anselm, archbishop of Canterbury; the king seized on the revenues of the archbishopric, and kept them five years in his hands. The next year was remarkable for the restoration of learning at Cambridge, where it had for a long time been quite neglected. In 1112 great numbers of Flemings, being obliged to leave their country by the inundation of the sea, came into England, and were settled about Ros and Pembroke. About this time the Welsh committed great ravages upon the frontiers; but Henry marching against them, they retired to the mountains. Some years after they committed the like depredations, which occasioned another invasion of Wales, but that soon ended in a peace; however, Henry obliged them to give him hostages, and 1000 head of cattle, to make him amends for the charge of the war. In 1115 Henry got the states of Normandy to swear fealty to prince William his son, then 12 years old; and the year following he did the same in England, to secure the crown to his family. In 1118 queen Matilda died. A year or two after prince William his son was unfortunately drowned as he was returning from Normandy, by the ship striking on a rock, and his whole company, amounting to about 150, except a very few who saved themselves by swimming. However, the king, desirous of another son, married Adelicia, daughter of Geoffrey, earl of Louvain; but she never proved with child. In 1125 cardinal John de Crema, the pope's legate, came over to England, to put the finishing stroke to the celibacy of the clergy. A synod being convened at London, he got some severe canons passed against such ecclesiastics as persisted in keeping their wives. The design of the court of Rome, in thus contending for the single life of the clergy, was to make them independent of the civil power, and to incorporate them into a society apart, to be governed by its own laws, which could not be so well done, whilst the clergy were allowed to marry, and have children. King Henry, by his seeming zeal on this article, politically got from the pope a power to put it in execution; which done, he gave the priests liberty to keep their wives, upon paying him a sum of money for a dispensation. The king having no child

by his second wife, after having been married to her six years, in 1127 assembled a great council, and got them to acknowledge his daughter Maud, who was returned to England upon the emperor's death, presumptive heir to the crown. Stephen, earl of Bulloign, who was afterwards king, was the first who took the oath of allegiance to her, in case Henry died without male issue. Soon after he married her to Geoffrey Plantagenet, earl of Anjou. In 1133, he caused the states of Normandy to take an oath of fealty to her and prince Henry her son. King Henry went over to Normandy the latter end of the summer, and died there on Dec. 1, 1133, in the 68th year of his age, and 36th of his reign. His body was brought over and buried in the abbey of Reading, which he had founded. He built several other abbeys, with the priory of Dunstable, and founded the sees of Ely and Carlisle. Henry was of a middle stature, and robust make, with dark brown hair, and blue serene eyes. He was facetious, fluent, and affable to his favourites. His capacity, naturally good, was improved and cultivated in such a manner, that he acquired the surname of Beauclerc by his learning. He was cool, cautious, politic, and penetrating; his courage was unquestioned, and his fortitude invincible. He was vindictive, cruel, and implacable; inexorable to offenders, rigid and severe in the execution of justice, and, though temperate in his diet, a voluptuary in his amours, which produced a numerous family of illegitimate issue. His Norman descent and connections with the continent inspired him with a contempt for the English, whom he oppressed in the most tyrannical manner, not only by increasing the number of the forests, which were too numerous before, but also by his unconscionable exactions; in consequence of which he was enabled to maintain expensive wars on the continent, and was allowed to be the richest prince in Europe when he died.

HENRY II. was in Normandy when king Stephen died, the empress Maud his mother having delivered up that duchy to him. He arrived in England about six weeks after the late king expired, and was crowned at Westminster, Dec. 19, 1154, being then in the 23d year of his age. He was the first of the race of the Plantagenets, and had been for some time earl of Anjou, &c. by the death of his father Geoffrey Plantagenet, earl of Anjou, &c. He was also possessed of Poictou, Guienne, and Saintonge, by virtue of his marriage with Eleanor, heiress of the house of Poictiers, after Lewis the Young, king of France, had divorced her. In him the Saxon line was restored, he being descended by the mother's side from the Saxon kings. The first acts of his reign seemed to promise an happy and prosperous administration. He instantly dismissed the mercenary soldiers who had committed the greatest disorders throughout the nation. He ordered all the castles which had been erected since the death of Henry I. to be demolished, except a few which he retained in his own hands for the protection of the kingdom. The adulterated coin which had been struck during the reign of Stephen was cried down, and new money struck of the right value and standard. He resumed many of those benefactions which had been made to churches and monasteries in the former reigns. He gave charters to several towns, by which the citizens claimed their freedom and privileges independent of any superior but himself. These charters were the ground-work of the English liberty; for thus a new order, namely, the more opulent of the people, began to claim a share in the administration, as well as the nobility and clergy. Thus the feudal government was at first impaired; and liberty began to be more equally diffused throughout the nation. He went over to do homage to the king of France in 1156, for the provinces he held there; but the chief motive of his crossing the sea was to recover Anjou from his brother Geoffrey. In 1157 he marched with a great army into Wales, to revenge their ravages on the frontiers; but they retired to their mountains, as usual, where, having pent them up for some time, and laid waste their country, he granted them a peace, by one of the articles reserving to himself the liberty of cutting large roads through their woods, that he might more easily penetrate into their country. In 1158 prince Richard was born, and a few days after king Henry was crowned a second time in the suburbs of Lincoln. The next year the king had another son born, who was named Geoffrey; and the same year he was crowned again, together with his queen, at Worcester. About this time his brother Geoffrey dying, he went over to France to lay claim to the earldom of Nants, which he obtained, and concluded a marriage between his eldest son Henry, about five years old, and Margaret, the French king's daughter, who was not above so many months; he also made a treaty with Conan duke of Bretagne, for marrying the duke's daughter Constance to Geoffrey, Henry's third son, then but a few months old; which marriage being celebrated five years after, Geoffrey became duke of Bretagne on his father-in-law's death. Henry revived his queen's title to Toulouse; but the king of France opposed him, upon which, in revenge, Henry ravaged his territories; however, a treaty was concluded without making any mention of Toulouse. The war soon after broke out between the two monarchs, upon Henry's precipitating the marriage between prince Henry and the daughter of Lewis, when the former was but seven, and the latter but three years old; quickly after she was brought to England to be educated. Henry did this in order to take possession of Gisors for his son, which the princess was to have for her dower; but this war was soon ended by the mediation of pope Alexander III. to whom both kings paid a most servile submission, each alighting, and taking hold of the rein of his bridle, to conduct him to his lodgings. The affairs above related detained Henry in France four years, and he returned to England 1163. Peace was settled abroad, but his repose was disturbed by a domestic vexation, which gave him a vast deal of trouble for several years; this was the famous contest between him and Thomas Becket, archbishop of Canterbury. The pride and ambition of the clergy were got to such an exorbitant height as to be detrimental to the state, and prejudicial to the royal authority; they pretended an exemption from the civil power, and Henry had come to a resolution to redress this grievance, and to reduce them within some tolerable bounds. When a clergyman was accused of a crime, he was tried in the ecclesiastical court, from whence there was no appeal: here the utmost partiality was shewn, and the most heinous crimes were only punished with degradation. The king, being resolved to reform these abuses, thought Becket, who had been his high chancellor, would have been serviceable to him in this good design, and made him archbishop of Canterbury for that very purpose. When the king first mentioned his design to the archbishop, he vehemently opposed it; but resolving to do that in spite of his efforts to the contrary, which he thought to do by his assistance, he convened the chief lords of the kingdom, both spiritual and temporal, and proposed to them a regulation, which tended to make them more subject to the civil power. The temporal lords agreed to these articles without any hesitation, but the bishops and abbots refused to do it without the addition of this saving clause, "saving the rights of the clergy and church," which was doing nothing at all, till the king threatened them, and then they complied; and even Becket, after standing out a great while, consented without the saving clause. Soon after the king got these articles confirmed by an assembly general, or parliament, which he convened at Clarendon; and here also the prelates, through fear, complied, and the archbishop was with great difficulty prevailed on by his brethren to give his consent to these articles. When these articles were sent to pope Alexander III. for his sanction, he presently condemned them, as prejudicial to the church, upon which Becket openly declared, that he repented of having promised to subscribe them; and the pope absolved him, and promised to stand by him. The archbishop became more insolent than ever, and this contest between the king and him continued a considerable time. In 1165 the king's daughter Maud was married to Henry duke of Saxony, from which marriage descends his present majesty king George. In

1166 prince John was born; and a little after the empress Maud, the king's mother, of whom so much is said in Stephen's reign, died in the 67th year of her age, and was buried at Roan, in Normandy. The king, having recovered from a dangerous fit of illness, was desirous of passing the rest of his days in quiet, which the pope threatened more and more to disturb, by thundering out against him the censures of the church; and therefore ordered matters so that he was thoroughly reconciled to Becket, and swore to restore him to his former state, protesting he heartily forgave all that was passed. This reconciliation was sincere enough on the king's side, but not so on Becket's. He no sooner arrived in England, than he suspended the archbishop of York, and excommunicated some other bishops who had taken part with the king against him, and proceeded to the same acts of severity against other great men. The bishops, thus put under the censures, repaired to the king in Normandy, and made heavy complaints against Becket's revengeful spirit. The king was so provoked at his turbulent behaviour, that he spoke aloud to the following purport: "It is my great unhappiness, that, among all my servants, there is not one who dares to avenge the affronts I am receiving from a wretched priest." From this time four of the king's domestics entered into a plot against Becket's life: accordingly, coming to Canterbury, they took an opportunity to follow him into the cathedral, and advanced after him up to the altar; where they fell upon him, and split his skull with their swords, so that his blood and brains flew all over the altar. This happened in 1171. The next year Henry sent over some forces to make a conquest of Ireland; they had great success, and Henry following with a formidable army, landed at Waterford, upon which the Irish voluntarily submitted, and Henry became master of Ireland. He left Hugh Lacy there to govern in his name, with the title of grand justiciary of Ireland, and set out for England. From England he went over to Normandy, to meet the pope's legates, who were there to examine into Becket's murder; where, after having declared his sorrow for the imprudent words he had dropped, which occasioned the prelate's assassination, he was absolved, upon promising to perform all that was required of him in favour of the pope and church, and to do penance at Becket's tomb, which he did upon his return into England the next year; for, landing at Southampton, he proceeded directly to Canterbury, and, as soon as he came in sight of the town, he alighted, pulled off his boots, and walked barefoot three miles, till he came to the tomb, where he submitted himself to be shamefully scourged by the prior and monks of St. Augustin. In the absence of Henry, a conspiracy was formed against him by his queen Eleanor, and his sons, Henry, Richard, and Geoffrey. Queen Eleanor was moved to this by her extreme jealousy, which had put her on dispatching Rosamond Clifford, commonly called Fair Rosamond, daughter of lord Clifford, the king's chief mistress. The sons wanted sovereignty. In short, the king was in danger of losing all his dominions in France, and William king of Scotland invaded the northern part of England: however, Henry got the better of all his enemies, and the king of Scotland was taken prisoner, and obliged to do homage for the kingdom of Scotland in general, and the county of Galloway in particular, and a peace was restored, 1171. He now applied himself to the affairs of government, and, about the year 1176, he divided England into circuits, appointing itinerant judges to go at certain times of the year, and hold the assizes, or administer justice to the people; which is practised at this day. About the same time London-bridge began to be built of stone, by Peter Coleman, a priest. The king, the pope's legate, and the archbishop of Canterbury, contributed towards the work. It was finished in about 33 years, during which time the course of the Thames was turned another way, by a trench cut for that purpose from Battersea to Rotherhithe. Henry, who had been all his life a slave to his lust, fell in love with Alice, the daughter of Lewis of France, who was put into his hands to be educated in England, and who was designed for his son Richard; but he detained the young princess from him: this discontented him. Prince Henry and prince Geoffrey were discontented for want of authority; so that, in 1182, their designs began to break out into action, and young Henry repaired to Guienne to stir up the Gascons to revolt; but he died of a fever, 1183. His brother Geoffrey did not long survive him. The death of the young king put a stop for some time to the troubles that were beginning to distract the royal family. But prince Richard, who was now heir to the crown, began about two years afterwards to raise fresh disturbances in the king's foreign dominions. He got the provinces to revolt, and acknowledge him for their sovereign, and did homage for them to Philip king of France. This occasioned a war between the two monarchs, and Henry, now deserted by his French subjects, was obliged at last, 1189, to make peace with Philip upon dishonourable terms. Henry died July 6th, 1189, in the 57th year of his age, and 35th of his reign. He had five sons by Eleanor his queen, of whom only Richard and John survived him. His daughter Eleanor was married to Alphonso king of Castile, and Joanna to William II. king of Sicily. Henry II. was of the middle stature, and the most exact proportion; his countenance was round, fair, and ruddy; his blue eyes were mild and engaging, except in a transport of passion, when they sparkled like lightning, to the terror of the beholders. He was broad-chested, strong, muscular, and inclined to be corpulent, though he prevented the bad effects of this disposition by hard exercise and continual fatigue; he was temperate in his meals, even to a degree of abstinence, and seldom or never sat down, except at supper; he was eloquent, agreeable, and facetious; remarkably courteous and polite; compassionate to all in distress; so charitable that he constantly allotted one tenth part of his household provisions to the poor; and, in a time of dearth which prevailed in Anjou and Le Maine, he maintained ten thousand indigent persons, from the beginning of spring to the end of autumn. His talents, naturally good, he had cultivated with great assiduity, and delighted in the conversation of learned men, to whom he was a generous benefactor. His memory was so surprisingly tenaceous, that he never forgot a face nor a circumstance that was worth remembering. Though superior to all his contemporaries in strength, riches, true courage, and military skill, he never engaged in war without reluctance; and was so averse to bloodshed, that he expressed uncommon grief at the loss of every private soldier. Yet was he not exempted from human frailties; his passions, naturally violent, often hurried him into excess; he was prone to anger, transported with the lust of power, and in particular accused of incontinence. However, on the whole, he was the king, the priest, the father of his country, and one of the most powerful and illustrious monarchs that ever flourished on the English throne.

HENRY III. succeeded his father king John; he was then in the 10th year of his age. As soon as John was dead, the earl of Pembroke convened the lords who had constantly adhered to that prince, and presenting young Henry to them, said, "Behold your king!" and then making a pathetic speech to them, which was applauded by the whole assembly, cried out, "Henry shall be our king!" and he was crowned at Gloucester, Oct. 28. After the coronation, the lords chose the earl of Pembroke guardian to the young king, and regent of the kingdom; and then many of the confederate barons began to think of making their peace with the new king. Prince Lewis being obliged to raise the siege of Dover, and being excommunicated by the pope's legate, contributed very much to their submission. A truce was agreed for four months; in the mean time Lewis went over into France for fresh forces, and in his absence many of the barons made their peace with the king. On May 19, 1217, a great battle was fought, in which the French army was totally routed. After this, Lewis met with such bad success, that he was obliged to sue for peace; and so a treaty was concluded on Sept. 11. whereby it was agreed, that all who had

sided with him should be restored to whatever rights and privileges they enjoyed before the troubles, and Lewis renounced all manner of pretensions to England; soon after which he set sail for France, leaving Henry in full possession of the kingdom. Affairs being thus happily settled, the regent, to give a further satisfaction to the minds of the people, sent positive orders to all the sheriffs to see the two charters of king John punctually observed; which not having all the effect he intended, he sent itinerant justices into all the counties, to see the strict observance of them; but, to the great grief of the kingdom, he was taken off by death, 1219. After the death of the earl of Pembroke, the government, during the king's minority, was committed to the bishop of Winchester, who was made regent; and Hubert de Berrg, who had defended Dover, was made justiciary. In 1221, the new building of Westminster abbey was begun, king Henry himself laying the first stone. The same year Joanna, the king's sister, was married to Alexander II. king of Scotland, and Hubert de Berrg married to Alexander's eldest sister. Hubert de Berrg got the ascendency with the king his master over the bishop of Winchester, and so insinuated himself into the royal favour, that he rose to an exorbitant degree of power, which he exercised in a most illegal and arbitrary manner. Though he was in effect prime minister, yet, as the bishop of Winchester, who was appointed regent by the parliament, was, by his office, superior to him, he contrived to get him removed. Lewis VIII. king of France, who succeeded his father Philip, broke the peace with the English, 1224, and confiscated all the territories they held in France. Upon this a parliament was called, and a 15th upon moveables was granted, on condition the charters of king John were strictly observed for the future. The king promised, but took little care to perform. With the money he raised an army, and sent it to Guienne; but we do not find that it made any great progress there. In 1226, the parliament declared the king at age, though he was not yet so old as the law required, which was twenty-one; after which he obliged all those who had charters to renew them, in order to raise money to fill his coffers. Hubert de Berrg wholly governed him, he having got the king to distress the bishop of Winchester, and to send him to his diocese. The king began to lose the affections of his people. What most contributed to it was his annulling, all of a sudden, the two charters of the king his father, which he had solemnly swore to observe, pretending he was not bound by what he had promised in his minority; and, having spent the winter in extorting great sums of money from his subjects, the spring following, 1229, went over with his army into France, and returned again into England, having, through his neglect, effected nothing. In 1233, the king demanded a subsidy of the parliament, for the payment of his debts contracted on account of his expeditions against France; but had the mortification to be refused, as so ill a use had been made of the money that had been granted him. A general odium being raised against Hubert de Berrg, the king was prevailed upon to dismiss him. But the bishop of Winchester, who was now prime minister, humouring the passions and inclinations of the king, acquired an exorbitant power, which he made a worse use of than even Hubert de Berrg himself. He represented to the king, that the barons were too powerful, and that they wanted to make themselves independent; and that the only way to repress them, was to send for a number of foreigners, and give them the places the barons held; and accordingly he invited over great numbers of Poictevins, his countrymen. This exasperated the barons; who, upon the king's summoning them to parliament, instead of meeting according to the summons, sent deputies to him, to acquaint him, that if he did not remove the bishop of Winchester and the Poictevins, they were resolved to set another prince upon the throne, who should govern according to law. The king endeavoured to reduce them by force of arms; but some of them breaking the confederacy, left the rest to his resentment. The earl of Pembroke retired into Wales, and being assisted by prince Lewellyn, he routed the royal army, and Henry retired to Gloucester; upon which the bishop of Winchester procured an order to be signed in council, and sent to the governors of Ireland, to plunder the estates of the earl of Pembroke, promising they should have more estates for their pains. This had the desired effect; it drew the earl over thither, where in a battle he was treacherously stabbed in the back. However, by the representations of the archbishop of Canterbury to the king, the bishop was disgraced and sent to his diocese, and his creatures turned out, and ordered to give an account of their actions, and of the money that had passed through their hands; but they took sanctuary in churches. This was in 1254. In 1236 the bishop went to Rome, and died 1238. In 1236, king Henry married Eleanor, second daughter to Raymond earl of Provence. He now gave himself wholly up to the direction of the queen's relations, and other foreigners, their adherents, loading them with gifts, pensions, &c. which, together with the grievances occasioned by this measure, was the cause of perpetual disputes and misunderstandings between the king and his parliament, for near 30 years, and ended at last in a civil war, called the barons' war. In 1239, the queen was delivered of a prince, who was named Edward. The pope had so great an ascendency, that in 1240 he nominated 300 Italians to the vacant benefices. In 1245, the queen was delivered of another son, who was named Edmund. The court of Rome continuing its exaction, the parliament, 1246, in letters signed by the king, the bishops, and the barons laid before the pope their grievances; but met with no redress. About this time died Isabella, queen dowager of England, and countess of March; for she married the earl of March after king John's death. In 1248, the king demanded a new subsidy from his parliament, which they refused; and upon their representing to him their grievances on account of the foreigners, he dissolved them, for fear of their proceeding to more vigorous measures; and to supply his wants, he was forced to sell his plate and jewels, which being quickly purchased by the citizens of London, who always pleaded poverty, when the granting him any aid was in question, he, in resentment, set up a fair in Westminster, to last 15 days; during which the Londoners were commanded to shut up their shops; and all fairs, that used to be kept at that time, were prohibited all over England. Henry very impoliticly fell out with Simon de Montfort, who had married his sister, and was made earl of Leicester: in a great passion he called the earl Traitor; upon which he, in a great passion, told the king, he lied, and that, if he were not a king, he would make him eat his words. However, the king was obliged to conceal that resentment which burned within him. The barons began now to exert themselves, and in a parliament held at Oxford, 1258, the confederacy was so strong against the king, (the barons coming well attended and well armed) that they compelled him in effect to lay down the sovereign authority, and to lodge it in 24 commissioners, 12 to be chosen by the king, and 12 by the barons, Simon de Montfort to be their president; who drew up some articles called *The Provisions of Oxford*, in favour of the barons, which the king and prince Edward were obliged to swear to the observance of, in consequence of which the foreigners were obliged to leave the kingdom. Henry got himself absolved from his oath by the pope; and 1261, declared in parliament he no longer looked upon himself obliged to observe these regulations. In 1263, the war broke out between the two parties, the barons having chosen the earl of Leicester for their general. On May 14, 1264, was fought the famous battle of Lewes, in which the royal army was routed; king Henry, and his brother Richard, king of the Romans, were taken prisoners; as were also prince Edward (who had beaten the Londoners in the first attack) and Henry son to the king of the Romans. And now the barons drew up a new plan of government, which was confirmed by the parliament, which met June 22. Things continued in this situation about a year; but prince Edward having the good fortune to escape from his confinement, raised a considerable army, and first

attacked young Montfort, who was conducting some forces to his father, and then advancing immediately against the earl, in an obstinate and bloody fight, on Aug. 4, 1265, totally routed Leicester's army, and set the king his father at liberty, the earl himself and his son Henry being slain on the spot. King Henry now confiscated the estates of the confederate barons, and severely chastised the city of London. In 1271, prince Edward having settled the affairs of the kingdom, undertook an expedition to the Holy Land, where he signalized himself by many acts of valour. Henry died at Bury St. Edmunds, Nov. 16, 1272, having reigned 56 years and 20 days, aged 64, and was interred in the abbey church of Westminster, near the shrine of Edward the Confessor, which was removed thither, 1269, just as the church (the most stately then in Europe) was finished. He had nine children, whereof only two sons, Edward and Edmund, and two daughters, Margaret and Beatrix, survived him. Trial by fire and water ordeal was by this king's command laid aside by the judges, and soon after grew quite out of use. Henry was of a middle size and robust make, and his countenance had a peculiar cast from his left eye-lid, which hung down so far as to cover part of his eye. The particulars of his character may be gathered from the detail of his conduct. He was certainly a prince of very mean talents; irresolute, inconstant, and capricious; proud, insolent, and arbitrary; arrogant in prosperity, and abject in adversity; profuse, rapacious, and choleric, though destitute of liberality, economy, and courage. Yet his continence was praise-worthy, as well as his aversion to cruelty; for he contented himself with punishing the rebels in their effects, when he might have glutted his revenge with their blood. He was prodigal to excess, and therefore always in necessity. Notwithstanding the great sums he levied from his subjects, and though his occasions were never so pressing, he could not help squandering away his money upon worthless favourites, without considering the difficulty he always found in obtaining supplies from parliament.

HENRY IV. duke of Lancaster and Hereford, surnamed of Bolingbroke, from his being born there, was the eldest son of John of Gaunt, duke of Lancaster, and ascended the throne upon the forced resignation of Richard II. and was crowned Oct. 13, 1399. The parliament meeting the day after the coronation, first passed an act of indemnity in favour of those who had taken arms for the king whilst only duke of Lancaster. The king also published a general pardon, excepting however the murderers of the duke of Gloucester. The parliament also passed an act settling the succession in the house of Lancaster. This might not have produced any ill consequence, as Mortimer earl of March and his brother died without issue, had not the second son of the duke of York married Anne their sister; which at length proved the source of that long and bloody contest between the houses of York and Lancaster. The convocation being sitting at the same time with the parliament, Henry, in order to gain the clergy to his side, sent to assure them, that he would maintain them in all their privileges and immunities, and was ready to join with them in extirpating heresy, and punishing obstinate heretics. And to preserve the esteem of the rest of his subjects, he caused all the bonds which Richard had extorted, as well from the city of London, as from the 17 counties, to be brought into chancery and publicly burnt. In the year 1400 a conspiracy broke out against the king, which was suppressed, and the chief conspirators were put to death; and soon after the late king was assassinated. About the time of the late conspiracy, Owen Glendour got the Welsh to renounce their subjection to England, and to own him for their sovereign; from which time he styled himself prince of Wales, and maintained his authority there for some years. He made an incursion into Herefordshire, and took Mortimer earl of March prisoner, for which king Henry was not sorry. The king marched against Glendour; but, he always retiring to the mountains of Snowden, it was not possible to come at him. In 1401, the parliament enlarged the statute of præmunire, which gave a great blow to the pope's power in England; and yet an act was obtained, by the influence of the court and the intrigues of the clergy, this session, for the burning of heretics, occasioned by the great increase of the Wicklifhites, or Lollards. One William Sawtree, a Lollard, parish-priest of St. Osith, in London, was immediately after that condemned by the ecclesiastical court; and, being delivered over to the secular power, was burnt alive by virtue of the king's writ, (called the writ *De hæretico comburendo*,) directed to the mayor and sheriffs of London. In 1402, the king married Joan of Navarre, widow of the duke of Bretagne, but he had no issue by her. This year the Scotch invaded England twice, and were both times defeated by the earl of Northumberland, and Henry Hotspur his son. In 1403, a conspiracy broke out, at the head of which was the earl of Northumberland, who was disgusted at the king's refusing to let him have the ransom of the Scotch prisoners of distinction. He engaged Owen Glendour in it, and it was agreed to dethrone Henry, and place the crown on the head of Mortimer. The king marched against them, and a battle was fought near Shrewsbury, where the king gained a complete victory. Another conspiracy broke out, in which was embarked Richard Scroop, archbishop of York, whom Richard II. had raised to that dignity, with several of the nobility; but this was entirely suppressed, 1408. To return to the civil government; in 1406, an act was passed to secure the freedom of election of members of parliament, which gives room to suppose the king had done something inconsistent with such freedom. However, he gave his assent to this act, for the sake of a subsidy he wanted. When the demand was made, the parliament told him, there was no apparent necessity for it; but in order to obtain it, he kept them so long sitting, that they were obliged to consent to it for their own convenience. He did the same in 1410, when he rejected the petition of the commons, for repealing or altering the late barbarous act against the Lollards; and, to shew how averse he was to relax any thing in this point, caused one Thomas Badby to be burnt, who was the second who suffered death on account of Wickliffe's opinions. In the mean time, the prince of Wales suffered himself to be so much debauched by evil companions, that he gave himself up to riotous and disorderly practices; one of his companions being arraigned for felony, he resolved to be present at the trial; and while sentence was passing, in a great passion he struck the judge on the face, who immediately ordered him to be arrested, and committed to the King's Bench, the prince hereupon relenting, suffered himself to be led quietly to prison. King Henry died March 20, 1413, in the 46th year of his age, and 14th of his reign. His actions had very little worthy or eminent in them; one thing, at least, has fixed an indelible stain on his memory, viz. his being the first burner of heretics. There was, in his reign, a dreadful plague in London, which swept away above 30,000 persons. Henry had by Mary de Bohun, his first wife, daughter of Humphrey, earl of Hereford, four sons, viz. Henry, who succeeded him; Thomas, duke of Clarence; John, duke of Bedford; and Humphrey, duke of Gloucester; and two daughters; Blanch, married to the elector palatine; and Philippa, to the king of Denmark. Henry IV. was of the middle stature, well proportioned, and perfect in all the exercises of arms and chivalry; his countenance was severe rather than serene; and his disposition sour, sullen, and reserved; he possessed a great share of courage, fortitude, and penetration; was naturally imperious, though he bridled his temper with caution; superstitious, though without the least tincture of virtue and true religion; and meanly parsimonious, though justly censured for want of economy, and ill-judged profusion. He was tame from caution, humble from fear, cruel from policy, and rapacious from indigence. He rose to the throne by perfidy and treason; established his authority in the blood of his subjects; and died a penitent for his sins, because he could no longer enjoy the fruits of his transgression. During this reign, William of Wickham, bishop of Winchester, Sir Robert Knolles, and Richard

Whittington, mayor of London, distinguished themselves for their works of charity and public foundation. Geoffrey Chaucer and John Gower rendered themselves famous for their poetry, and are looked upon as the first reformers of the English language.

HENRY V. surnamed Henry of Monmouth, ascended the throne upon the death of his father, Henry IV. and was proclaimed March 20, 1413, and crowned April 9, following; after which, the first thing he did was to send for his old companions, whom he exhorted in a very pathetic manner to forsake their evil courses: and, making them handsome presents, charged them at the same time, on pain of his displeasure, never to come to court. He then chose a council of the greatest and ablest of his subjects, turned out such judges as had abused their authority, continued the deserving, particularly the chief-justice Gascoigne, who had committed him for his insult in court, when prince of Wales, and filled up the places of those he had removed with persons of the like honour and integrity. He did also the same with respect to inferior magistrates. The greatest blot in his character was, his persecuting the Wicklitfites, or Lollards. But that was more owing to the superstition of the times, than to his own natural temper; he often expressing a dislike to such proceedings. Sir John Oldcastle, baron of Cobham, who was looked upon as the chief protector of the Lollards, was the first of the nobility who suffered on account of religion. Henry, as soon as he mounted the throne, began to think of recovering what the English had lost in France; and there being great dissentions in that kingdom, Henry had laid hold of that opportunity, and sent ambassadors to demand Normandy, &c. and all that had been yielded to Edward III. by the treaty of Bretagne. The negociations went on without any hopes of an accommodation; and when Henry was just going to embark, a plot was discovered against his person, for which the earl of Cambridge, the lord treasurer Scroop, and Thomas Grey, a privy counsellor, were executed. It is thought they were bribed by French gold to carry on this conspiracy. This affair being over, he embarked with his troops in Aug. 1415, landed on the 21st at Havre de Grace in Normandy, and then besieged and took Harfleur; and, resolving to march to Calais, he crossed the Somme, Oct. 9, where the French army under the constable d'Albert, four times as numerous as the English, were waiting to give him battle, in full confidence of victory. David Gam, a Welsh captain, being sent to view their situation, on his return said, "there were enough to kill, enough to take prisoners, and enough to run away." The king was not a little pleased with this Welshman's report. Henry, after exhorting his men to put their trust in God, the giver of victory, attacked the French. The battle began at ten in the morning, and lasted till five in the afternoon, Oct. 25, 1415, when, by the surprising courage and conduct of the king, and the bravery of his troops, the whole numerous French army, said to consist of more than 100,000 men, was entirely defeated. The constable d'Albert, the duke of Alençon, with several other princes and great men, and 10,000 private men, were slain. Among the prisoners, who were very numerous, were the dukes of Orleans and Bourbon, and many persons of distinction. The English lost only the duke of York, and the earl of Suffolk, a few knights, and 400 private men. The king immediately returned thanks to God for the victory. This was called the battle of Agincourt, from a castle of that name near the field of battle. The civil wars raged more than ever in France: Henry went over in July, 1417, and made great progress; and, in the beginning of the year 1419, Rouen surrendered. And now all Normandy was again fallen under the dominion of the English, except a few castles, 215 years after it had been taken from them in the reign of king John. Henry also surprised and took Pontoise, which opened him a way to the very gates of Paris. At last a treaty was concluded at Troye on May 21, 1420, whereby it was agreed, that Henry should marry the princess Catharine, that he should be regent of the kingdom during king Charles's life (who being frequently afflicted with fits of lunacy, was incapable of governing,) and that, after his death, the crown of France should descend to the king of England and his heirs for ever. Henry hereupon espoused the princess Catharine, and the marriage was solemnized on the 30th of May. In Feb. 1421, Henry arrived in England with his queen, who was crowned a few days after. The parliament, which met in May, granted the king a subsidy for carrying on the war against the dauphin; but at the same time, in a petition they presented, told him, that the conquest of France proved the ruin of England. In June the king returned to France, and forced the dauphin to raise the siege of Chartres, took Dreux, and in October laid siege to Meux, which was not wholly subjected till May following; about which time, queen Catharine arrived from England, and the two courts kept the Whitsun-holidays together at Paris in a magnificent manner. Afterwards, Henry marched against the dauphin, fell sick by the way, and died at Vincennes, Aug. 31, 1422, in the 31st year of his age, and 10th of his reign. He had by his queen Catharine only one son, Henry, born March 6, 1421, at Windsor. Henry V. was tall and slender, with a long neck, an engaging aspect, and limbs of the most elegant turn. He excelled all the youth of that age in agility, and the exercise of arms; was hardy, patient, laborious, and more capable of enduring cold, hunger, and fatigue, than any individual in his army. His valour was such as no danger could startle, and no difficulty oppose; nor was his policy inferior to his courage. He managed the dissentions among his enemies with such address as spoke him consummate in the arts of the cabinet. He fomented their jealousies, and converted their mutual resentment to his own advantage. Henry possessed a self-taught genius, that blazed out at once without the aid of instruction or experience; and a fund of natural sagacity, that made ample amends for these defects. He was chaste, temperate, modest, and devout, scrupulously just in his administration, and severely exact in the discipline of his army, upon which he knew his glory and success in a great measure depended. In a word, it must be owned he was without an equal in the art of war, policy, and government.

HENRY VI. was scarce 9 months old, when he succeeded his father Henry V. Dec. 6. 1422. He was immediately proclaimed not only king of England, but heir of France, pursuant to the treaty of Troye; and, upon the death of Charles V. who died in less than two months after, the duke of Bedford, uncle to the infant king, ordered him to be proclaimed king of France, at Paris, according to the same treaty; and took upon himself the regency of that kingdom, as the late king his brother had desired, when near his end. On the other hand, the dauphin, as soon as he heard of his father's death, caused himself to be proclaimed king of France, and was crowned in November at Poictiers. On Nov. 9, the parliament met (when the queen sat among the lords, with the royal infant in her lap) to settle the government during the king's minority; and John, duke of Bedford, was appointed protector of the kingdom; and Thomas Beaufort duke of Exeter, and Henry bishop of Winchester, his governors. I shall pass over the transactions of the regency, during the minority of the king, and shall only mention what he was immediately concerned in. The duke of Bedford, thinking it might be of service to have Henry crowned in France, having been first crowned in England, on Nov. 6, 1429, he went over to Paris, and was crowned there at the end of the following year, and returned to England in Jan. 1432, being then 10 years old. In 1437, died Catharine of France, king Henry's mother, and widow of Henry V. After the death of that prince, she married Owen Tudor, a Welsh gentleman; from this marriage sprung Henry earl of Richmond, king of England, under the name of Henry VII. In 1444, a truce was concluded at Tours between England and France, which was prolonged to 1449. Soon after the commencement of the truce, king Henry married Margaret of Anjou, who arrived in England 1445; and she and her favourites managed the king just as they pleased, which caused great uneasiness among the people; which Charles took the

advantage of; for, upon the duke of Somerset, then regent, refusing to give the satisfaction he demanded for Tongres being surprised by Surienne, governor of the Lower Normandy, for the English, 1448, whilst the truce subsisted, he fell upon Normandy with four armies at once, and reduced it before the end of Aug. 1450. Guienne followed the fate of Normandy, after having been in possession of the English 300 years; and nothing remained to the English in 1453, of all their vast acquisitions in France, but only Calais and Guienne. England was now in a distracted condition: there were two parties in the court, one the duke of Gloucester's, the other the cardinal of Winchester's; with whom were joined Kemp, archbishop of York, and William de la Pole, earl, and afterwards marquis and duke of Suffolk. The duke of Gloucester was exceedingly beloved by the people; but the cardinal got the better of him in the council, and in the king's confidence, in which the duke of Gloucester lost ground every day. They first removed him from the council board; and then a parliament being summoned at St. Edmundsbury, which met in 1447, the duke was arrested and closely confined, under colour that he designed to kill the king and seize the crown, though nobody believed a word of the matter. The next morning he was found dead in his bed, people making no doubt but he was murdered. The cardinal died about a month after, and left the world and his immense riches with as much reluctance as ever any one did. And now the queen and Suffolk governed all in the king's name, and none but their creatures were employed in the administration. The universal hatred of the people against them made the duke of York begin to think of asserting his claim to the crown. In 1450, the commons so pursued the duke of Suffolk, that the queen, in order to save him, found herself under a necessity to have him banished; but in his passage to France, being met by an English man of war, the captain without any ceremony ordered his head to be cut off. He was succeeded in the queen's confidence by Edmund Beaufort, duke of Somerset, almost as odious to the people as Suffolk had been. The duke of York at first proceeded with great caution; and, as an essay how the people stood affected, he instituted one Jack Cade, under the name of John Mortimer, to raise a rebellion in Kent, where he drew together great numbers under pretence of reforming the government; and became so strong, that he cut in pieces a detachment of the king's army, and entered London in triumph, the city opening her gates to him; but, being deserted by his followers, he was taken and slain. At length, the duke of York having concerted measures with his friends, especially Richard Nevil, earl of Salisbury and the earl of Warwick, the war broke out between the two houses of Lancaster and York, the former having for their device the red rose, and the latter the white rose; and whole torrents of English blood were spilt in this contest. The first battle was fought near St. Alban's, May 31, 1455, when the royal army was totally routed, with the loss of 5000 men. The duke of Somerset and several other nobles and great men were slain, and the king himself taken prisoner. York affected to treat him with great respect, and was appointed protector of the realm. He left the king and queen at full liberty; the consequence of which was, he was dismissed from his protectorship, and he and his friends retired from court. After this, there was a reconciliation between the two parties; but, as it was not sincere, the quarrel soon broke out again. In 1459, the earl of Salisbury defeated the king's troops commanded by lord Audley, and killed 2400, together with Audley himself and his principal officers, at Blorcheath, in Shropshire. On July 6, 1460, the earl of March, eldest son of the duke of York, gained a complete victory at Northampton, killing 10,000 royalists. The king was again taken prisoner, and the queen with the prince of Wales retired into Scotland. And now a parliament was called, which the duke of York expected would offer him the crown. Being disappointed, he sent them a memorial asserting his claim; but all that the parliament did, was to resolve, that Henry should enjoy the crown during his life, after which, it should devolve on the duke of York and his heirs. In the mean time, the duke of York was absolute master of the government, and of the king's person. The queen had drawn together an army of 18,000 men; the duke of York marched against her with only 5000, expecting to be joined by his son the earl of March; but before he could come up, the duke was attacked by the queen's forces, near Wakefield in Yorkshire, Dec. 31, 1460, his army put to flight, he himself slain, and his head fixed upon the walls of York, where the earl of Salisbury's soon accompanied it, he having been taken and beheaded at Pontefract. The earl of Rutland, the duke's second son, about 12 years old, was taken in the flight, and cruelly slain by lord Clifford. Notwithstanding this discouragement, the earl of March marched with his army, and defeated Jasper Tudor, earl of Pembroke, at Mortimer's cross in Herefordshire; and though the queen got the better of the earl of Warwick at Bernard's heath, near St. Alban's, and freed the king her husband, yet the earl of March coming up with a great army, and being joined by the remains of the earl of Warwick's, she retired into the north; and the earl entered London, as it were, in triumph, and was, by the management of the earl of Warwick, proclaimed king, by the title of Edward IV. For the conclusion, see the life of king Edward IV. Henry VI. without any princely virtue or qualification, was totally free from cruelty and revenge; on the contrary, he could not, without reluctance, consent to the punishment of those malefactors who were sacrificed to the public safety; and frequently sustained personal indignities of the grossest nature, without discovering the least mark of resentment. He was chaste, pious, compassionate, and charitable. In a word, he would have adorned a cloister, though he disgraced a crown; was rather respectable for those vices he wanted, than for the virtues he possessed. He founded the college of Eton, near Windsor, and King's college, in Cambridge, for the reception of those scholars who had begun their studies at Eton.

HENRY VII. earl of Richmond, was the son of Edmund Tudor, earl of Richmond, and of Margaret, descended from a bastard son of John of Gaunt, duke of Lancaster, by Catharine Rowet or Swinford, mistress, afterwards wife, to that prince. Immediately after the victory of Bosworth, the earl caused Te Deum to be sung, and his whole army to fall on their knees, to return God thanks, after which they saluted him with unanimous and repeated shouts of "Long live king Henry!" from which time he took on himself the style and authority of king. An extraordinary kind of distemper raged about this time in England, particularly in London, called the sweating-sickness, because it threw persons into a profuse sweat, and carried them off in 24 hours; but those who got over that time usually recovered. It continued from the middle of September to the 8th of October, and swept away great numbers of people. Two mayors and 6 aldermen of London died of it within 8 days. On October 30, 1485, Henry was crowned. At the same time, he appointed a band of 50 men to attend him, called yeomen of the guard. The parliament met on November 7, and passed an act, that the inheritance of the crown should rest, remain, and abide in the king, and the heirs of his body; and then reversed the attainders of those who had taken part with the king, whilst only earl of Richmond. On January 18, 1486, he married the princess Elizabeth, eldest daughter of Edward IV. to the great joy of the people. On September 20, the queen was delivered of a prince, who was named Arthur. Henry behaved with great coldness to his queen, and on all occasions shewed his great aversion to the whole York party, looking upon that house to be his rivals; which partiality bred a great deal of ill blood, and was the source of most of the troubles which afflicted his reign. A rumour being raised, that the duke of York, one of Edward's sons, was yet alive, having by some means or other escaped his uncle's cruel design, the people readily gave into it. And this gave occasion to

Richard Simon, a priest at Oxford, to set up one Lambert Simwell, a baker's son, and student under him, and impose him upon the world for the said duke. However, a report being soon spread that the earl of Warwick had escaped out of the tower, which, though false, caused great joy among the people, Simon now judged it best to instruct his pupil to personate that earl, and Ireland was judged the most proper place to open the first scene in; where he was received with joy, and proclaimed, at Dublin, king of England and lord of Ireland, by the name of Edward VI. King Henry now confined the queen his mother-in law, widow of Edward IV. to Bermondsey monastery in Southwark, and seized all her estates; and there she remained as long as she lived. Another step the king took, was to shew the true earl of Warwick to the people. The duchess dowager of Burgundy sent over into Ireland, in May 1487, 2000 German veterans, presently after which the sham king was crowned with great solemnity. Then the new king, and the German and Irish forces, came over into England. King Henry fell upon them, June 16, near Newark-upon-Trent, and totally routed them. Simwell was taken prisoner, with the priest his master. Henry gave Simwell his life, employed him first about his kitchen, and then made him one of his falconers, in which post he remained till his death. And now Henry filled his coffers by confiscating the estates of divers persons, under pretence of their favouring the late conspiracy. He thought it necessary at last to have the queen crowned, which was performed on November 25, almost two years after the marriage. In June, 1492, prince Henry was born. About this time, the duchess of Burgundy began to play off the second Simwell. This was Peter Peterkin, or Perkin Warbeck, son of a converted Jew, of Tournay, who had lived a considerable time in London, who personated the duke of York. He was sent to Portugal, afterwards to Ireland; and the king of France, being told the duke of York was in Ireland, sent for him, lodged him in his palace, and appointed him a guard; but when Charles was upon making peace with England, he sent Perkin away. Several great men in England favoured the plot, which being discovered, some of them suffered death. King Henry sent Sir Edward Poynings to Ireland as his deputy, 1494, who holding a parliament, an act was passed, called Poyning's Law, whereby all the statutes of England, relating to the public, were to be of force in Ireland. In 1495 Perkin embarked for England, and landing some of his men on the coast of Kent, to see how the people stood affected, the Kentish men presently took up arms, and cut to pieces those who were landed, except about 150, who being taken prisoners, were all hanged by order of the king. Upon this, Perkin sailed back to Flanders. The king, having a subsidy granted, 1497, to revenge the insult of the king of Scotland, who had twice invaded England the year before with Perkin, it was raised with so much rigour, that it caused an insurrection in Cornwall; the malecontents marched to Blackheath, where the king attacked and totally defeated them, killing 2000 on the spot. L. Audley their general, Flammock and Joseph, the chiefs of the rebels, were taken and executed; the rest were pardoned. A peace was soon after concluded between the two monarchs. King James would not deliver up Perkin Warbeck, but honourably dismissed him and his wife, and by their own desire sent them into Ireland, before the conclusion of the treaty. Charles VIII. king of France, died in April, 1498, and was succeeded by Lewis XII. About this time there was an insurrection in Cornwall, in favour of Perkin Warbeck, who came from Ireland to head the malecontents there; but his army of about 6000 men, upon the news of the king's advancing, submitted themselves; who pardoned them all, except a few ringleaders. Perkin, after having been exposed in an ignominious manner, was sent to the tower; where he, plotting his escape together with the earl of Warwick, was hanged; and the earl, but 24 years old, and who had been prisoner from the beginning of this reign, was beheaded on Tower-hill, Nov. 1499. In 1500, the plague raged in England, particularly in London, where 30,000 died of it. In 1501, Catharine of Spain was married to Arthur prince of Wales. The prince died about 5 months after his marriage, April 2, 1502, in the 17th year of his age; and some time after, the king created Henry his second son, prince of Wales, who, upon his father's death, succeeded to the crown. In 1503, Elizabeth, Henry's queen, died. At this time, the king grievously oppressed his subjects, by means of two infamous ministers, Empson and Dudley, two lawyers. The avarice of Henry put him on projecting the marriage of Catharine, his son Authur's widow, with his other son Henry, rather than part with that princess's dowry, which was 200,000 crowns of gold; and a dispensation was obtained from the pope; so Henry married his brother's widow, though the marriage was not consummated till after the king came to the crown. The king's eldest daughter Margaret was about the same time married to James IV. king of Scotland; from her descended our king James I. King Henry, finding he drew near his end, granted a general pardon, and ordered by his will, that his successors should make good what his ministers had unjustly extorted from the people. He died at Richmond, April 22, 1509, in the 52d year of his age, and 24th of his reign. Henry was tall, straight, and well-shaped, though slender; of a grave aspect and saturnine complexion; austere in address, and reserved in conversation, except when he had a favourite point to carry; and then he could fawn, flatter, and practise all the arts of insinuation. He inherited a natural fund of sagacity, which was improved by study and experience; nor was he deficient in personal bravery, or political courage. He was cool, close, cunning, dark, distrustful, and designing; and of all the princes who sat upon the English throne, the most sordid, selfish, and ignoble. The nobility he excluded entirely from the administration of public affairs, and employed clergymen and lawyers, who, as they had no interest in the nation, and depended upon his favour, were more obsequious to his will, and ready to concur in all his arbitrary measures. At the same time it must be owned he was a wise legislator, chaste, temperate, assiduous in the exercise of religious duties, decent in his deportment, and exact in the administration of justice, when his own private interest was not concerned; though he frequently used religion and justice as cloaks for perfidy and oppression. In this reign was built a large ship of war, called the *Great Harry*, which cost 14,000£. This was properly speaking the first ship in the English navy. Before this period, when the king wanted a fleet, he had no other expedient than to hire ships from the merchants.

HENRY VIII. succeeded his father Henry VII. at the age of 19 years, on April 22, 1509, and in his person united the two houses of Lancaster and York. At the beginning of his reign he made an example of those two hated ministers, Empson and Dudley; but, as it was difficult to condemn them without straining a point, with so much nicety had they acted their villany, though they had been condemned and sentenced to die for conspiring against the king and state, an act of attainder passed at the meeting of the parliament against them, and they were beheaded on Tower-hill. The king's marriage with Catharine of Arragon, relict of his brother Arthur, was solemnized the beginning of June, as was the coronation of both king and queen on the 24th of the same month. About this time, Fox, bishop of Winchester, introduced to court Thomas Wolsey, a clergyman, as a fit person to serve the king. Though Henry had just concluded a new treaty of alliance with Lewis XII. yet he was drawn into a war, under pretence of the recovery of Guienne, by Pope Julius II. and Ferdinand the Catholic, king of Arragon, the queen's father; though his mind was chiefly bent on his pleasures, in which he was so extravagant, that he squandered away 1,800,000£ which his father had with so much anxiety hoarded up. This war was opposed by some of the council, and one of them expressed himself to this purpose; "Let us leave off our attempts against the

terra firma; the natural situation of islands seems not to sort with contests of that kind; England is alone a just empire; or, when we enlarge ourselves, let it be that way we can, and to which it seems, the eternal Providence has destined us; and that is, by sea." By the treaty concluded 1511, Henry was to send over 6000 men; and Ferdinand, for the same purpose, obliged himself to furnish 500 men at arms, 1500 light horse, and 4000 foot; though they never effected any thing further than giving Ferdinand an opportunity of conquering Navarre, and keeping the French out of Italy. Henry, though he saw how he had been imposed on, yet he suffered himself to be drawn into a second league against France, by the pope, the emperor Maximilian, and king Ferdinand, who all had their separate views, and made use of Henry to bring them about. Having sent the best part of his troops over to Calais before him he arrived there on June 30, 1513, and returned to England in October, having made a successful campaign. While Henry was abroad, James IV. of Scotland broke through all his alliances with him, and invaded Northumberland with an army of 60,000 men, taking Norham castle, and several other places. The earl of Surry, with 26,000 men, engaged the Scots army at Flodden, September 9, and, after a most bloody and obstinate battle, in which several thousands were killed on both sides, obtained a complete victory. The Scotch king was never seen after the battle, so that doubtless he fell in it. Among the slain were also one Scotch archbishop, two bishops, four abbots, and 17 barons; whereas the English lost not one person of note. In 1514, Thomas Wolsey, then prime minister, was made archbishop of York, and, some time after, Leo X. sent him a cardinal's hat. In August, 1514, a treaty of peace was concluded between Lewis XII. and king Henry, one article of which was, the marriage of Lewis with the princess Mary, which accordingly was solemnized at Abbeville in October. Lewis dying in less than three months after the marriage, about two months after the queen-dowager took for her second husband Charles Brandon, duke of Suffolk. On February the 11th, 1516, queen Catharine was delivered of a princess, named Mary, who was afterwards queen of England. In 1517, the sweating sickness raged again in England more violently than at the beginning of the last reign. At this time Luther began to write against indulgences. In 1521, Edward Stafford, duke of Buckingham, was beheaded; he was the last high constable of England. The same year Henry wrote a book against Luther, *Of the seven Sacraments, &c.* It was presented to pope Leo X. in full consistory, who, for this service done the church, bestowed on Henry and his successors the title of *Defender of the Faith.* This title being afterwards confirmed by parliament, the kings of England have born it ever since. The same year was remarkable for the invention of muskets. Henry having entered into an alliance with France, Wolsey (without troubling the parliament) issued out orders in the king's name, for levying a sixth part upon the goods and estates of the laity, and a fourth upon those of the clergy. This threw the whole nation into a ferment, and had like to have raised a rebellion; upon which the king disavowed the orders, and left the whole blame to fall on the cardinal. In 1530, cardinal Wolsey was arrested by the earl of Northumberland, for high treason, and died as they were conducting him to London. Toward the end of the year 1532, the king privately married Anne Boleyn; and the next year, 1533, an act was passed, forbidding all appeals to Rome, on pain or incurring a premunire. The king's marriage with Boleyn was made public; and Dr. Cranmer, having been made archbishop of Canterbury, upon the death of archbishop Warham, the judgment of the convocation of both provinces having been first obtained, pronounced the sentence of divorce between king Henry and Catharine of Arragon, on May 23d, and confirmed his second marriage; which done, the new queen was crowned on June 1. Catharine died in 1536. The pope published a sentence declaring Henry's marriage with Catharine good and lawful, requiring him to take her again, and denouncing censures in case of a refusal; in return to which, when the parliament met, the beginning of the year 1534, an act was passed for abolishing the pope's power in England, with Peter-pence, procurations, delegations, expedition of bulls, and dispensations coming from the court of Rome. The same act declared the king's marriage with Catharine null and void, and his marriage with Anne Boleyn valid, settling the succession of the crown upon their issue. In the next session the parliament confirmed the king's title of supreme Head of the Church, and passed several other acts against the pope. And shortly after a proclamation was issued out against giving the bishop of Rome the name of pope, and for erasing it out of all books, that, if possible, no remembrance of it might remain. Pope Clement VII. died during this rupture, and was succeeded by Paul III. In 1535, the king ordered a general visitation of the religious houses, and Cromwell was appointed visitor-general; and shocking scenes of debauchery, lewdness, and impiety, where discovered, as well as the frauds made use of in respect to relicts and images, to impose on the deluded people, which ended in their suppression. Great quantities of these images, together with the pretended relics of saints, were publicly burnt by the king's order; and, among the rest, the bones of Thomas Becket, whose costly shrine was seized for the king's use. The number of monasteries suppressed from first to last were 643, together with 90 colleges, 2374 chantries, 3 chapels, and 110 hospitals. Their yearly value, as given in before the suppression, when the rents were low, because the fines upon the leases were high, was 152,517£ but their real value was supposed to be above a million. Besides this, the plate, furniture, and other effects, were of a prodigious value, which all fell into the king's hands. King Henry allowed small pensions to several of the abbots, monks, and nuns, sold the abbey-lands to his subjects at easy rates, and applied part of the revenue of these houses towards founding the new bishoprics of Chester, Gloucester, Peterborough, Oxford, Bristol, and Westminster, which last ceased to be a bishopric after its first bishop. The order of the knights of St. John of Jerusalem was soon after entirely suppressed. The king had been married to Anne Boleyn but about three years, when he began to be jealous of her, which ended in her ruin. At the same time he was in love with Jane Seymour, which doubtless made him more willing to entertain disadvantageous thoughts of the queen; and the popish party might possibly take advantage of the disposition the king was in, to complete her destruction. However, she was accused of a criminal familiarity with her own brother, the earl of Rochford, and four of her domestics, who were all executed, and, after all, the queen was beheaded on the green within the tower, on May 19, 1536. The very next day the king married Jane Seymour, who bore him prince Edward, his successor; but his birth cost the queen his mother her life. Queen Anne's marriage was nulled on pretence of a pre-contract with the lord Percy; and her daughter Elizabeth, as well as Mary, the daughter of Catharine, were illegitimated by act of parliament. In 1539, by the counsels of Gardiner and others of the popish party, an act passed in parliament, which made it burning or hanging for any one to deny transubstantiation, to maintain the necessity of communion of both kinds, that it was lawful for priests to marry, that vows of chastity may be broken, that private masses are unprofitable, or that auricular confession is not necessary to salvation. This act was deservedly called the bloody act. In January 1540, the king married Anne, sister to the duke of Cleves. He disliked her at first sight, swearing they had brought him over a Flanders mare; but for political reasons he married her. But his aversion to her continuing, he got himself divorced from her in about six months after. Cromwell had the chief hand in this match, and the king never forgave him for it, though he afterwards created him earl of Essex. He did not enjoy this new title long, for the popish party, taking advantage of the king's displeasure towards him, found means to work his ruin. He was accused of high treason by the duke of Norfolk, attain-

ed in parliament before the divorce, and lost his head on a scaffold, July 28. On August 8, the king's marriage with Catharine Howard was declared void. She was accused of lewdness and adultery upon much better evidence than Anne Boleyn, and was condemned by act of parliament, and beheaded on Tower-hill, February 12, 1542. The lady Rochford, one of her accomplices, who had accused her husband, the lord Rochford, of a criminal commerce with his sister Anne Boleyn, was beheaded with her. Derham, Mannock, and Culpepper, who confessed they had lain with the queen, were also executed. The same year, 1542, Ireland was erected into a kingdom; from which time our kings were styled kings of Ireland, whereas before they had only the title of lords of Ireland. In July 1543, the king took to his sixth wife the lady Catharine Parr, relict of Nevil Lord Latimer. She was a great friend to the reformation. King Henry having entered into a league with the emperor against France, passed over to France, and took Boulogne, Sept. 14, 1544. This war continued, without much success on either side, till 1546, when a treaty of peace was concluded June 7. King Henry died Jan. 29, 1547, in the 56th year of his age, and 38th of his reign, and was buried at Windsor. He built St. James's palace in the 28th year of his reign; and some time before instituted the college of physicians. Henry VIII. before he became corpulent, was a prince of a goodly personage, and commanding aspect rather imperious than dignified. He excelled in all the exercises of youth, and possessed a good understanding, which was not much improved by the nature of his education. Instead of learning that philosophy which opens the mind, and extends the qualities of the heart, he was confined to the study of gloomy and scholastic disquisitions, which served to cramp the ideas, and pervert the faculties of reason, qualifying him for the disputant of a cloister, rather than the lawgiver of a people. In the first years of his reign, his pride and vanity seemed to domineer over all his other passions; though from the beginning he was impetuous, headstrong, impatient of contradiction and advice. He was rash, arrogant, prodigal, vain-glorious, pedantic, and superstitious. He delighted in pomp and pageantry, the baubles of a weak mind. His passions, soothed by adulation, rejected all restraint; and as he was an utter stranger to all the finer feelings of the soul, he gratified them at the expense of justice and humanity, without remorse or compunction. He wrested the supremacy from the bishop of Rome, partly on conscientious motives, and partly for reasons of state and convenience. He suppressed the monasteries, in order to supply his extravagance with their spoils; but he would not have made those acquisitions so easily, had they not been productive of advantage to his nobility, and agreeable to the nation in general. He was frequently at war; but the greatest conquest he obtained was over his own parliament and people. Religious disputes had divided them into two factions. He was rapacious, arbitrary, froward, fretful, and so cruel, that he seemed to delight in the blood of his subjects. He never betrayed the least symptoms of any tenderness in his disposition; and seemed to live in defiance of censure, whether ecclesiastical or secular; he died in apprehension of futurity, and was buried at Windsor with idle processions and childish pageantry, which in those days passed for real taste and magnificence.

HENSFEET, *s.* the hedge fumitory.

HEPAR, in the old chymistry, the name formerly given to the combination of sulphur with alkali. Such combinations are now called sulphurets.

HEPATIC, or HEPATICAL, *a.* [*hepaticus*, Lat. from *hepar*, the liver, Gr.] belonging to, or situated in the liver. *Hepatic air*, is a permanently elastic fluid, of a very disagreeable odour, somewhat like that of rotten eggs, obtained from the combinations of sulphur with earths, alkalies, metals, &c.

HEPS, or HIPS, *s.* the berries of the dog-rose briar.

HEPTACAPSULAR, *a.* [from *hepta*, seven, Gr. and *capsa*, a cavity, Lat.] having seven cavities or cells.

HER, the oblique case of *she*.

HERA'CLIDÆ, or the *Return of the* HERACLIDÆ *into Peloponnesus*, *s.* in chronology, is a famous epocha, that constitutes the beginning of profane history; all the time preceding that period being accounted fabulous. This return happened in the year of the world 2862, 100 years after they were expelled, and 80 after the destruction of Troy.

HERALD, *s.* [Teut.] an officer who registers genealogies, adjusts and paints coat-armour, and regulates funerals. An officer at arms, whose business it is to declare war, to proclaim peace, to marshal all the solemnity at a coronation, christening, marriage, and funeral of princes, to emblazon and examine coats of arms, &c. *Heralds* were formerly held in much greater esteem than at present, and were created and christened by the king, who, pouring a gold cup of wine upon their head, gave them the herald-name; but this is now done by the earl-marshal. They could not arrive at the dignity of *Herald*, without having been seven years pursuivant; nor quit the office of *Herald*, but to be made king at arms. The three chief *Heralds* are called *Kings at Arms*, the principal of which is *Garter*; the next is called *Clarencieux*; and the third *Norroy*; these two last are called *Provincial Heralds*. Besides these, there are six other *inferior Heralds*, viz. York, Lancaster, Somerset, Chester, Richmond, and Windsor; to which, on the coming of king George I. to the crown, a new *Herald* was added, styled *Hanover Herald*; and another styled *Gloucester King at Arms*. The kings at arms, the *Heralds*, and the four pursuivants, are a college or corporation, erected by a charter granted by Richard III. by which they obtain several privileges, as to be free from subsidies, tolls, and all other troublesome offices. Figuratively, a forerunner, omen, or token of something future.

To HERALD, *v. a.* to introduce as by a herald. Not in use.

HERALDRY, *s.* [*heraldlerie*, Fr.] the art of armoury and blazoning, which comprehends the knowledge of what relates to solemn cavalcades and ceremonies of coronations, instalments, the creation of peers, nuptials, funerals, &c. Also, whatever relates to the bearing of arms, assigning those that belong to all persons, regulating their right and precedences in point of honour, and restraining those who have not a just claim from bearing coats of arms that do not belong to them. See BLAZONING, ARMS, SHIELD, BEARING, &c.

HERB, *s.* [*herba*, Lat. *herbe*, Fr.] in botany, a plant whose stalks are soft, and have nothing woody in them; as grass or hemlock. In cookery, a plant whose leaves are chiefly used; as sage or mint. SYNON. A *plant* is any vegetable production arising from seed, but seems confined to such as are not very large. *Herbs* are those plants whose stalks are soft, and have no woody substance.

HERBA'CEOUS, *a.* [from *herba*, a herb, Lat.] belonging to, or having the properties of herbs. Feeding on vegetables.

HERBAGE, *s.* [*herbage*, Fr.] a collective or general term applied to several sorts of herbs: grass, or pasture. In law, the tithe and right of pasture.

HE'RBWOMAN, *s.* a woman who sells herbs.

HE'RBY, *a.* partaking of the nature of herbs.

HERCULA'NEUM, an antient city of Italy, near Naples, totally destroyed by an eruption of Mount Vesuvius, in the reign of the emperor Titus. In the years 1689 and 1711, upon digging in these parts, something of this city was discovered. In 1738 fresh attempts were made, and since that time a prodigious number of monuments of every kind have been discovered, such as paintings, statues, bustoes, furniture, utensils, &c. The situation was near where Portici now stands.

HERCULE'AN, *a.* a term applied to that which requires much strength, labour, and difficulty to perform.

HE'RCULES, the son of Jupiter by Alcmena, born at Thebes, in Bœotia. By the envy of Juno he narrowly escaped death; two serpents being sent to kill him in his cradle, he overcame and killed them by pulling them to pieces. After having performed many extraordinary things by the command of Eurystheus, he accomplished the twelve following works or exploits, commonly and emphatically called his labours: 1. He overcame the lion of Nemæa, whose skin he wore continually afterwards; for which reason painters, sculptors, &c. commonly represent him so dressed. 2. He destroyed the hydra, or monster with seven heads. 3. He conquered the Erymanthean boar. 4. He caught a hind with golden horns and brazen hoofs in the forest of Parthenia, after a year's hunting. 5. He destroyed the harpies. 6. He subdued the Amazons, took their queen's girdle, and obliged her to marry his friend Theseus. 7. He cleansed Augea's stable. 8. He overcame the Cretan bull, Pasiphaë's gallant, who vomited fire. 9. He killed Diomede, and his horses, which he fed with men's flesh. 10. He subdued the Spanish Geryon, and carried away his flock. 11. He took away the golden apples from the garden of Hesperides, and killed the dragon that watched them. 12. He brought Cerberus with the three heads from hell. Besides these, he conquered the centaurs, crushed Antheus to death between his arms, carried the axle-tree of the heavens to relieve Atlas, &c. After his death he was taken into the number of the gods, and married Hebe, the goddess of Youth. The antients moralize this fable thus: By Hercules (they say) the strength of reason and philosophy is meant, which subdues and conquers our irregular passions; that his marriage intimates, that great and noble actions are always fresh blooming in the memory of all, being transmitted in the histories of their times to the latest posterity.

HE'RCULES, in astronomy, a constellation of the northern hemisphere.

HE'RCULES-PILLARS, antiently so called, are thought to be the two mountains which form the straits of Gibraltar: namely, Calpe on the side of Europe, and Avila on the side of Africa.

HE'REFORD, the capital city of Herefordshire, with three markets, on Wednesday, Friday, and Saturday. It is pleasantly and commodiously seated among delightful meadows and rich corn-fields, and is almost encompassed by the Wye and two other rivers, over which are two bridges. It is a large place, and had six parish churches, but two of them were demolished in the civil wars. It had also a castle, which has been long destroyed. It is a bishop's see, and the cathedral is a handsome structure. The chief manufacture is gloves, many of which are sent to London. It is governed by a mayor, six aldermen, and a sword-bearer. The streets are broad and paved; and it is 28 miles W. by N. of Gloucester, and 130 W. N. W. of London. It sends two members to parliament.

HE'REFORDSHIRE, a county of England, bounded on the W. by Radnorshire and Brecknockshire; on the N. by Shropshire, on the E. by Gloucestershire and Worcestershire, and on the S. by Monmouthshire, and part of Gloucestershire. It extends about 38 miles from N. to S. and 33 from E. to W. It is divided into 11 hundreds, which contain 1 city, 6 market towns, 176 parishes, 391 villages, 1500 houses, and about 90,000 inhabitants. The air is healthy, the climate mild, the soil generally fertile, producing wheat, barley, oats, clover, turnips, &c. a principal part of the land being employed in tillage; the face of the country is rich, beautiful and picturesque; and it abounds with wood. The Herefordshire cider is sufficiently celebrated, and apples grow here in great abundance, being plentiful even in the hedge-rows. The sheep are small, affording a fine silky wool, in quality approaching to the Spanish; but the superior quality of the wool not being thought adequate to atone for the smallness of the carcase, the farmers, in general, are desirous of obtaining a breed larger and more profitable. The principal rivers are the Wye, Monnow, Lug, and Frome, all of which are well stored with fish, and the salmon, in particular, is very remarkable; for, in other parts of England, they are so far out of season, after spawning, as to be unwholesome food, till they have been again at sea to recover themselves; but here they are found fat and fit for the table in all seasons.

HEREIN, *ad.* in this; in this case, sense, or respect.

HEREINTO, *ad.* into this.

HEREMITICAL, *a.* more properly *eremitical*; [from *eremos*, a desert, Gr.] solitary; suitable to an hermit.

HERMETICALLY, *ad.* in a chymical manner. A term applied to the closing of the orifice of a glass tube, so as to render it air-tight. Hermes, or Mercury, was formerly supposed to have been the inventor of chymistry; hence a tube which was closed for chymical purposes, was said to be *hermetically* or *chymically* sealed. It is usually done by melting the end of the tube by means of a blow-pipe, and then twisting it with a pair of pliers or tongs.

HE'RMIT, *s.* [from *eremos*, a desert, Gr.] a person who lives in a desert, or at a distance from society, for the sake of contemplation or devotion.

HE'RMITAGE, *s.* [*hermitage*, Fr.] the cell, cot, or dwelling of a hermit.

HE'RMITAGE, THE, Northumberland, near Warkworth, is the best preserved, and most entire now remaining in these kingdoms. It still contains three apartments, hollowed in the solid rock, and hanging over the river in the most picturesque manner imaginable, with a covering of antient hoary trees, reliques of the venerable woods in which this fine solitude was embowered.

HERMITICAL, *a.* like a hermit; suitable to a hermit.

HE'RMODACTYL, *s.* [from *Hermes*, Mercury, and *dactylos*, a finger, Gr.] a medicinal root of a determinate and regular figure, and representing the common figure of a heart cut in two from half an inch to an inch in length. It comes from Egypt and Syria, and was formerly used as a gentle cathartic.

HEXAPOD, *s.* [from *hex*, six, and *pous*, a foot, Gr.] an animal having six feet.

HEXA'STICK, *s.* [from *hex*, six, and *stichos*, a verse, Gr.] a poem consisting of six lines or verses.

HEXHAM, a town of Northumberland, not populous, with narrow streets and ill-built houses. Its market-place, however, near the centre of the town, is a spacious square, supplied by a fountain with water. Its present church, which contains many antient tombs, bears considerable marks of Saxon grandeur, and it was formerly famous for an abbey. On the screen, at the entrance of the choir, are some strange monastic paintings, called the Dance of Death. Hexham is believed to have been formerly a Roman station. It is now principally noted for its manufactory of tanned leather, shoes, and gloves; and is situated on a small stream, called the Hextold, near the Tyne, 22 miles W. of Newcastle, and 284 N. N. W. of London. Market on Tuesday and Saturday.

HOLDERFORTH, *s.* an haranguer; one who preaches or speaks in public; a word of contempt.

HOLDERNESS, a division of the East Riding of Yorkshire, remarkable for its large breed of horned cattle and horses. It has the title of an earldom.

HOLDFAST, *s.* any thing by which a door is fastened when put close; a catch; a hook.

HOLDING, *s.* a tenure; a farm.

HOLDSWORTH, or HOLDSWORTHY, a large town of Devonshire, seated between two branches of the river Tamar, 41 miles N. N. W. of Exeter, and 215 W. by S. of London. Market on Saturday.

HOLE, *s.* [*hole*, Sax. *hol*, Belg.] a cavity that is narrow and long; a den; a cavity made with a borer; a rent or cut in a garment. Figuratively, a mean dwelling or house; a subterfuge; a shift.

HOLIDAM, *s.* a word in antient writers, signifying Blessed Lady.

HOLILY, *ad.* in a pious manner.

HOLINESS, *s.* when applied to God, that attribute which represents him as disliking and detesting all wickedness. Applied to men, an absolute abhorrence to all kinds of sin, and a conformity to the nature and will of God; the state of being hallowed, consecrated, or sanctified; the title assumed by the Pope.

HOLLA, *interj.* [*hola*, Fr.] a word used in calling to a person at a distance or out of sight. Used substantively by *Milton*. "List, list!—some far-off *holla*, breaks the silent air."

To HOLLA, *v. a.* Johnson says this word is now vitiously written *hollo* by the best authors; and sometimes *hollow*; to cry out with a loud voice. "In his ear I'll *holla* Mortimer." *Shak.* "What *holloing* and what stir is this?" *Shak.*

HOLLAND, the most considerable of the Seven United Provinces, lying between the Zuyder-Zee, the North Sea, Zealand and Utrecht. It is divided into N. Holland, W. Friesland, and S. Holland; and these together make but one province, whose states take the title of Holland and W. Friesland. The Ye, a small bay, which is an extension of the Zuyder-Zee, separates, Holland from W. Friesland. The extent is not large, being not above 180 miles in circumference. The land is almost every where lower than the sea. The water is kept out by dams and dykes, which they are particularly careful of keeping in good repair, lest the whole province should be laid under water. It is crossed by the mouth of the Rhine and Maese, by several small rivers, and by a great number of canals, on which they travel day and night at a small expense. Properly speaking it is nothing but a large meadow, and yet all things are in great plenty, by reason of its trade; and the land serves to feed great numbers of cattle. It is so populous, that no country in the world can match it of so small an extent; the pastures are so rich, that they have plenty of butter and cheese; and the seas and rivers furnish them with fish. There are 400 large towns, and 18 cities, which make up the states and the province, and several others that have not the same privilege. The houses are well built, and extremely neat and clean, as well in the country as in the towns. Learning has flourished here, and they have both linen and woollen manufactures, besides their building a great number of ships. The Dutch formerly surpassed all other nations with regard to trade, and by their settlements in foreign countries, especially in the East Indies, and on the coast of Guinea. This province has a court of justice, which finally determines in all criminal and civil affairs; and its states, in which the sovereignty resided, were composed of the deputies of the nobility and of the cities, besides the stadtholder. We must not confound Holland, properly so called, with the republic, which comprehends the Seven United Provinces. Amsterdam is the capital city. The war with France caused a revolution in this

as well as the other provinces of the United States. Holland at first appeared hostile to the new republic of France, but never heartily co-operated with the allied powers. The junction, however, was apparently made in 1792, and the French, in 1794, invaded the states, and were received without much opposition; the stadtholder and his family took refuge in England; and the states, or republic of Holland, afterwards framed a constitution upon the French model; since which their government has undergone various modifications, in obedience to the dictates of France; and on June 11, 1806, was erected into a monarchy under Lewis Buonaparte, brother to the emperor Napolean. They joined with France in an alliance offensive and defensive, but the Cape of Good Hope, and most of their India settlements, were taken by the English, (though restored to them at the peace,) and in October 1797, a fleet, which they had destined for Brest, as was supposed, fell in with the English fleet, commanded by admiral Duncan, who gained one of the most brilliant victories on the records of naval history. He took no less than nine ships of the line.

HO'LLAND, a district of Lincolnshire, in the S. E. part of the county. It is divided into Upper and Lower, and reaches from Wainsfleet to the Isle of Ely, and to the grounds opposite Lynn in Norfolk. In nature, as well as appellation, it resembles a province of the same name in the Netherlands. It consists entirely of fens and marshes, in which are many quicksands, some in a state of nature, but others cut by numberless drains and canals, and crossed by raised causeways. The lower, or southern division, is the most watery, and is preserved from constant inundation by nothing but vast banks, raised on the sea-coast and rivers. It was formerly impassable; but since the fens have been drained, the lands are grown more solid, and the inhabitants sow cole-seed upon them to their great advantage. Through the whole fenny district, the walls of the houses are generally of brick, and their roofs covered with slate or tile. A stone house is rarely to be seen here, and as rarely one thatched with straw, but many of those of the more opulent farmers are large and handsome. The churches are, in general, spacious, and several of them are built with excellent stone. The air is reckoned unwholesome, and the water, in general, is so brackish as to be unfit for internal purposes; on which account the inhabitants are obliged to make reservoirs of rain water. In summer vast swarms of insects fill the air, and prove exceedingly offensive. Yet, even here, industry has produced comfort and opulence, by forming excellent pasture land out of swamps and bogs, and even making them capable of producing large crops of corn. The fens too, in their native state, are not without their utility, and afford various objects of curiosity to the naturalist. The reeds, with which the waters of their fens are covered, make the best thatch, and are annually harvested in great quantities for that purpose. Prodigious flocks of geese are bred among the undrained fens, forming a considerable object of commerce, as well for their quills and feathers, as for the bird itself, which is driven in great numbers to the London markets. The principal decoys, in England, for the various kinds of wild ducks, teal, widgeon, and other fowls of the duck kind, are in these parts. Wild geese, grebes, godwits, whimbrels, coots, ruffs, reeves, bitterns, and a great variety of other species of water fowl, breed here in amazing numbers; and stares, or starlings, resort hither during the winter, in myriads, to roost on the reeds, breaking them down by their weight. Near Spalding is the greatest heronry in England, where the herons build together on high trees, like rooks. The avoset, or yelder, is found in great numbers about Fossdyke Wash, as are also knots and dottrels.

HO'LLAND, NEW, including Van Dieman's land, extends from 10 to 44 deg. S. Lat. and between 110 and 154 of Lon. E. from London. Notwithstanding many navigators had touched here in the last century, the eastern part of this vast tract was totally unknown till Captain Cook made *his* voyages, and, by fully exploring that part of the coast, gave his country an undoubted right to the possession of it; which accordingly has since been taken possession of under the name of *New South Wales*. This country has now become an object of great consequence, by reason of the establishment of a British colony in it; where the criminals condemned to be transported are sent to pass their time of servitude. For this purpose, on Dec. 6, 1786, orders were issued by his majesty in council for making a settlement on New Holland, establishing a court of judicature in the colony, and other regulations necessary on the occasion, and the sanction of parliament was given in 1787. The first squadron appointed consisted of the Sirius frigate, Captain Hunter; the Supply armed tender, Lieutenant Ball; three store-ships, for carrying provisions and stores for two years; and lastly, six transports to carry 778 convicts, of which 558 were males, with a detachment of marines in each. On the 18th of January the Supply arrived at Botany-Bay, on the coast of New South Wales, which situation was afterwards changed for Port Jackson, as more favourable to a settlement. Subsequent voyages were made, and there is now a regular colony, represented to be in a very flourishing state, but after surmounting great difficulties. The number of persons on the settlement, including convicts were by the latest accounts said to be about twelve thousand.

HO'LLAND, *s.* in commerce, a fine and close kind of linen, so called from its being first manufactured in Holland.

HO'LLOW, (*hóllŏ*) *a.* [from *hole*] having the inside or any part scooped out; having a void space within, opposed to *solid*. Noisy, or like a sound made in some cavity. Figuratively, hypocritical.

HO'LLOW, (*hóllŏ*) *s.* a cavity, or empty space; a concavity; a cavern, or den; a pit, passage, or empty space in the inside of a thing.

To HO'LLOW, (*hóllŏ*) *v. a.* to scoop furrows, channels, or cavities in a thing. To shout or make a loud noise. "Comes *hollowing* from the stable," *Pope*. So written by neglect of etymology, instead of *holla*, says *Johnson*. See HOLLA.

HO'LLOWLY, (*hóllŏly*) *ad.* with empty spaces within; with channels or vacuities. Figuratively, with insincerity.

HO'LLOWNESS. (*hóllŏness*) *s.* cavity; the state of having empty spaces; want of sincerity; deceit; treachery.

HO'LLY, *s.* a tree of which there are a great many varieties, with variegated leaves, small white blossoms, and red berries. The common holly grows naturally in woods and forests in many parts of England.

HO'LLYHOCK, *s.* [*holihec*, Sax.] the rosemallow. It is in every respect larger than the common mallow.

HOLME, *s.* in botany, the ilex, or ever-green oak.

HOLME, a town of Cumberland. See ABBEY-HOLME.

HO'LOCAUST, *s.* [from *holos*, the whole, and *kaio*, to burn, Gr.] a burnt sacrifice. In the Jewish church, it was a sacrifice which was all burnt upon the altar; and of this kind was the daily sacrifice. This was done by way of acknowledgment, that the person offering and all that belonged to him, were the effect of the divine bounty. The holocaust was to be a bullock without blemish; it was brought to the tabernacle of the congregation, with the hands of him that offered it upon its head; then the Levites killed it, sprinkled the blood of it upon the altar, and slaying it, cut it in pieces, after which it was laid upon the altar, and burnt by the priest *for a sweet smelling savour unto the Lord*.

HO'LOGRAPH, (*hólograf*) [from *holos*, the whole, and *grapho*, to write, Gr.] in the Scottish law, applied to a deed written entirely by the granter's hand.

HO'LPEN, the old part. pass. of HELP.

HO'LSTEIN, a duchy of Germany, in the circle of Lower Saxony, subject to the king of Denmark, having the Baltic on the E. the German Ocean on the W. Sleswick and the Baltic on the N. and Lunenburg, Lubeck, Hamburg, and

the Elbe on the S. It is about 70 miles in length, and 48 in breadth, and is a pleasant country, fruitful in wheat, barley, oats, beans, peas, and rape-seed, and producing horned cattle, sheep, rams, swine, horses, poultry, bears, and fish, in great abundance; it is also well seated for trade, and has some considerable harbours, particularly those of Hamburg and Lubeck. There are some imperial cities, which are governed by their respective magistrates, but the religion of the whole country is Lutheran. The duchy is divided into Holstein Gluckstadt, subject to the king of Denmark; and Holstein Gottorpf, subject to the emperor of Russia. The governor, appointed by the king of Denmark, generally resides at Gluckstadt, and the regency court for Russian Holstein is held at Keil. The intended junction between the Baltic and the North Sea, will be formed entirely through Holstein and the other Danish territories.

HO'LSTER, *s.* [*hulster*, Teut.] a case for a horseman's pistol.

HOLT, a town in Norfolk, 20 miles N. N. W. of Norwich, and 122 N. E. of London. Market on Saturday.

HOLT, either at the beginning or end of the name of a place, from *holt*, Sax. a wood, signifies that it is, or has been, a wood; sometimes indeed it may come from *hol*, Sax. hollow, especially when the name ends in *ton* and *don*.

HO'LY, *a.* [*halig*, Sax.] performing every duty of religion, and abstaining entirely from sin; set apart, consecrated, or dedicated to divine uses; pure, or without spot; sacred.

HO'LY GHOST, *s.* [*halig* and *gast*, Sax.] the Holy Spirit, or third Person in the adorable Trinity, whose peculiar office, as distinguished from the Father and the Son, is sanctification and inspiration.

HO'LY-THURSDAY, *s.* the day on which the ascension of our Saviour is commemorated.

HO'LY-WEEK, *s.* [*halgan* and *wuca*, Sax.] the week before Easter, so called because set apart by the church in a peculiar manner to offices of piety and devotion, as a preparation for the ensuing festival of Christ's resurrection.

HO'LYDAY, or HO'LIDAY, *s.* [*halgan* and *dag*, Sax.] a day set apart by the church for commemoration of some saint, or some remarkable particular in the life of Christ; a day wherein people abstain from work, and entertain themselves with feasts, &c. a day of gaiety and joy.

HO'LYHEAD, a sea-port and cape of the Isle of Anglesea, rendered considerable by being the place where passengers usually embark for Dublin, there being packet-boats that sail for that city every day, except Tuesday, wind and weather permitting. It is noted for several remains of old fortifications, one of which, called *Turris Munimentum*, is an old stone wall, with a small turret on its centre; there are also some druidical antiquities in its neighbourhood. Under the mountains that overhang the town, is a large cavern in the rock, supported by natural pillars, and called the parliament-house; it is accessible only by boats, and the tide runs into it. On the adjacent rocks, the herb grows of which they make kelp, a fixed salt used in making glass, and in alum works; and in the neighbourhood is a large vein of white fuller's earth, and another of yellow. On the Isle of Skerries, 9 miles to the N. is a lighthouse. Large flocks of puffins are often seen here; they all come in one night, and depart in the same manner. The commodities are butter, cheese, bacon, wild-fowl, lobsters, crabs, oysters, razor-fish, shrimps, herrings, cod-fish, whitings, sea tenches, and plenty of other fish. It is, in fact, little more than a fishing town, with three good inns, and it has a very convenient harbour for the northern trade, when taken short by contrary winds. It is situated near the extremity of the island, joined to the N. W. part of it by a stone bridge, of one arch; 60 miles E. of Dublin, 24 nearly W. of Beaumaris, and 260 N. W. of London. Lat. 53. 19. N. lon. 4. 34. W. A small market on Saturday.

HO'LY-ISLAND, or LINDISFARNE, a small island on the coast of Northumberland, about 6 miles S. E. of Berwick, and one mile and a half from the nearest land, from whence, at low water, people ride over to it. It is two miles and a quarter long, and one in breadth, and consists of one continued plain. The soil is rocky and full of stones, for which reason it is thinly peopled; it has but one small town, or rather village, standing on a rising ground; it consists of a few scattered houses, chiefly inhabited by fishermen, with two inns, and a church. Under the castle, which stands at the southern point, on almost a perpendicular rock, near 60 feet high, there is a commodious bay, or harbour, defended by a blockhouse. The castle is accessible only by a narrow and winding pass, cut out of the rock, on its southern side. The N. and N. E. coasts of the island are formed of perpendicular rocks, the other sides sink, by gradual slopes, to the sand. It has plenty of fish and fowl, but the air and soil are reckoned bad. The W. part is left wholly to the rabbits, and there is not a tree on the island. The monastery, which covered near four acres, is entirely in ruins, but there are various fragments of the offices remaining. It is properly a semi-island, being encompassed with water at every flood, but sand at ebb. The E. part, which is much the broadest, is joined to the W. by a small slip of land.

HO'LYWELL, a town of Flintshire, which, although in great part new, is, from its vicinity to the lead mines, and its considerable manufactures, become the most flourishing in the county. It takes its name from the famous well, called St. Winifred's, concerning which so many fables and superstitious notions have prevailed. It is a copious stream of very cold and pure water, bursting out of the ground, at the foot of a hill, with such impetuosity as to discharge 21 tuns of water in a minute. Over the spring there is a chapel, built by the countess of Derby, mother of Henry VII. which stands upon pillars, and on the windows are painted the history of St. Winifred's life. Besides the cold bath, celebrated for wonderful cures, formed at the spring head, and covered with a beautiful Gothic shrine, it is now applied to the purpose of turning several mills for the working of copper, making brass-wire, paper, and snuff, and spinning cotton. It is 10 miles E. of St. Asaph, and 212 N. E. of London. Market on Friday.

HO'MAGE, *s.* [*hommage*, Fr.] the reverence, respect, submission, or fealty, professed and performed to a sovereign or superior; respect or submission shewn by any external action.

HO'MAGER, *s.* [*hommager*, Fr.] one who holds by homage of a superior lord.

HOME, *s.* [*ham*, Sax.] a person's own house. Figuratively, the country in which a person lives, or place of his constant residence. Used in composition, for any thing produced in our own country, or made within a person's own house.

HOME, *ad.* to the house wherein a person lives; so one's own country; fully; closely; to the utmost; to the purpose; to the point designed. Joined to a substantive, it implies force, or efficacy. "The *home* thrust of a friendly sword." *Dryd.*

HO'MEBORN, *a.* natural; domestic; or of one's own country.

HO'MELINESS, *s.* plainness; rudeness; coarseness.

HO'MELY, *a.* plain; coarse; rude, or not polished by the assistance or information of foreigners.

HO'MELY, *ad.* in a plain manner; coarsely.

HO'MELYN, *s.* a kind of fish.

HO'ME-MADE, *a.* made in our own country, opposed to *foreign*.

HO'MER, *s.* [Heb.] a measure among the Hebrews, containing about three pints; Bailey says, two bushels.

HOMESPU'N, *a.* spun or wrought in a private house,

not by professed manufacturers. Made in one's own country, opposed to *foreign*. Figuratively, coarse; rude; wanting perfection or elegance. Used substantively for a coarse, rude, unpolished, or ill bred person.

HO'MESTALL, or HO'MESTEAD, *s.* [*ham* and *stede*, Sax.] a house, or place where a house stood.

HO'MEWARD, or HO'MEWARDS, *ad.* towards home; or towards the house wherein a person constantly resides.

HOMICI'DAL, *a.* murderous; bloody.

HO'MICIDE, *s.* [from *homo*, a man, and *coedo*, to slay, Lat.] murder. It is divided into *voluntary*, when committed with malice; or *casual*, when done by accident. A murderer; a manslayer, from *homicida*, Lat. *homicide*, Fr. "Hector comes, the *homicide*, to wield his conqu'ring arms." *Dryd.*

HOMILETICAL, *a.* [from *homilos*, an assembly, Gr.] social, conversable.

HO'MILY, *s.* [from *homilos*, an assembly, Gr.] a plain and popular discourse on some diving subject; applied to those which were composed at the Reformation to be read in churches, in order to supply both the casual and necessary defect of sermons.

HOMOGE'NEAL, or HOMOGE'NEOUS, (the *g* is pronounced soft) *a.* [from *homos*, the same, and *genos*, kind, Gr.] having the same nature or principles of the same nature or kind.

HOMOGE'NEALNESS, HOMOGENE'ITY, or HOMOGE'NEOUSNESS, *s.* the quality of having the same nature or principles.

HO'MOGENY, *s.* [from *homos*, the same, and *genos*, kind, Gr.] likeness; or sameness of nature.

HOMOLOGA'TION, *s.* in the civil law, the act of confirming or rendering a thing more valid and solemn, by publication, repetition, or recognition thereof. It is derived from a Greek word signifying consent or assent.

HOMO'LOGOUS, *a.* [from *homos*, the same, and *logos*, speech, Gr.] having the same proportion. In logic, applied to things which agree in name, but have a different nature.

HOMO'NYMOUS, *a.* [from *homos*, the same, and *onoma*, a name, Gr.] signifying several things, applied to words which have several senses.

HOMO'NYMY, *s.* [from *homos*, the same, and *onoma*, a name, Gr.] equivocation; ambiguity.

HOMO'TONOUS, *a.* [from *homos*, the same, and *tonos*, sound, Gr.] having the same sound.

HOMO'TONY, *s.* [from *homos*, the same, and *tonos*, sound, Gr.] sameness of sound.

HONAN, a city of China, of the first rank, capital of the province of Honan. It is situated in the centre of the empire, 360 miles S. S. W. of Pekin.

HONDU'RAS, a large province of North America, bounded on the N. by the bay of the same name, on the E. by the Mosquitos shore, on the S. by Nicaragua and Guatimala, and on the W. by Guatimala and Vera Paz. This country, though exceedingly fertile by nature, is almost a desert. The soil, in many parts, bears Indian corn and grapes, three times a year; its other produce is wheat, pease, large gourds, cotton, wool, honey, wax, and provisions of all kinds. It produces, in greater abundance than any part of America, the logwood-tree, which in dying some colours is so far preferable to any other material, that the consumption of it in Europe is considerable, and it is become an article in commerce of great value. During a long period, no European nation intruded upon the Spaniards in these provinces, or attempted to obtain any share in this branch of trade. But after the conquest of Jamaica by the English, one of the first objects of the settlers on that island was, the great profit arising from the logwood trade, and the facility of wresting some portion of it from the Spaniards. Their first attempt was made at Cape Catouche, the N. E. promontory of Yucatan. When most of the trees near this Cape were felled, they removed to the island of Trist, in the Bay of Campeachy; and in latter times their principal station has been in the Bay of Honduras. The Spaniards, alarmed at this encroachment, endeavoured by negociation, remonstrances, and open force, to prevent the English from obtaining any footing on that part of the American continent. But, after struggling against it for more than a century, the disasters of an unsuccessful war extorted from the court of Madrid, in 1763, a reluctant consent to tolerate this settlement of foreigners in the heart of its territories. This privilege was confirmed by the definitive treaty of 1783; by which, however, it was stipulated, that nothing in this concession should be considered as derogating, in any respect, from the sovereignty of his Catholic majesty; that, if the English had erected any fortifications in the country, they should be demolished, and none erected in future; and that they should confine themselves within a certain district, lying between the rivers Wallis, or Bellize, and Rio Honda, taking the course of the said two rivers for unalterable boundaries, so as that the navigation of them be common to both nations. But, by a convention signed in 1786, these limits were extended; the English line, beginning from the sea, was to take the centre of the river Sibun, or Jabon, and continue up to the source of the said river; thence to cross, in a straight line, the intermediate land, till it intersected the river Wallis; and by the centre of the same river, the said line was to descend to the point where it would meet the line already settled in 1783. By this convention, moreover, the English were not only permitted to cut logwood, but mahogany, or any other kind of wood, and to carry away any other produce of the country; with certain exceptions, however, against the establishing of any plantations of sugar, coffee, &c. and they were likewise permitted, with certain restrictions, to occupy the small island called Casina, St. George's Key, or Cayo Casina. The English settlement in this country had formerly been considered as foreign; but, in 1790, by an act of parliament, they were allowed all the privileges of a British colony. The principal towns are Valladolid, the capital; Truxillo; Gracias a Dios; and St. Jago.

HONE, *s.* a fine sort of whetstone, of different colours, used for setting an edge on penknives and razors.

To HONE, *v. n.* [*hongian*, Sax.] to pine or long for any thing. Seldom used.

HO'NEST, *a.* [*honestus*, from *honor*, honour, Lat.] performing every act of justice, or fulfilling every obligation and relation in which we stand as members of society.

HO'NESTLY, *ad.* consistent with justice; consistent with our duty.

HO'NESTY, *s.* [*honestas*, from *honor*, honour, Lat.] goodness, which makes a person prefer his promise or duty to his passion or interest.

HO'NEWORT, *s.* an umbelliferous plant, with few flowers in the rundlets.

HO'NEY, *s.* [*hunig*, Sax. *honig*, Belg.] a thick, viscous, fluid substance, of a whitish or yellowish colour, sweet to the taste, soluble in water, of a fragrant smell, secreted by certain glands near the bottom of the petals of flowers, sucked up by the bee in its proboscis or trunk, swallowed, and discharged again from the stomach through its mouth into some of the cells of its comb; destined for the food of the young, but, in hard seasons, fed on by the bee itself. Figuratively, sweetness, or seducing allurements, applied to words; used as a term of tenderness and fondness.

To HO'NEY, *v. n.* to make use of endearing, sweet, or fond expressions.

HO'NEY-BAG, *s.* the stomach which bees always fill to satisfy, and to spare; vomiting up the greater part of the honey, to be kept against winter.

HO'NEYCOMB, *s.* [*honig*, *camb*, Sax.] the cells of wax, in which a bee stores its honey. These cells have each of them six sides, and are closely fitted to each other. It has been remarked that no other geometrical figure could have been chosen for them, that would have been equally capacious, without any loss of room, so that the operation of infinite wisdom is apparent even in the impression of that instinct, whereby these animals are directed to fabricate their cells in that particular form and in no other.

HONEY-DEW, *s.* sweet dew, found early in the morning on the leaves of divers plants.

HONEY-FLOWER, *s.* a plant with a perenial root, and of the appearance of a shrub. It produces large spikes of chocolate-coloured flowers in May, in each of which is contained a large quantity of black sweet liquor, from whence it is supposed to derive its name.

HONEY-MOON, *s.* the first month after marriage, so called from the fondness and tenderness which appears then between a married couple.

HONEYSUCKLE, *s.* [*hunig-suele*, Sax.] in botany, a plant, so called from the sweetness of its odour; it is likewise named the *woodbine*.

HONEYLESS, *a.* without honey, or robbed of their honey, applied to bees.

HONIED, *a.* covered with honey. Sweet, flattering, or enticing, applied to words.

HONITON, a neat, well-built, and populous town of Devonshire, with a large manufactory of broad-lace, (formerly of serges) and an estimated exportation to London of about five tons of butter weekly. It is pleasantly seated on the river Otter, over which it has a bridge, in the best and pleasantest part of the country, abounding with uncommonly beautiful landscapes all the way to Exeter, and on the great western road from London, 16 miles E. of Exeter, and 156 W. by S. of London. Market on Saturday.

HONORARY, *a.* [from *honor*, honour, Lat.] done in order to confer honour, or as a mark of esteem; conferring honour, but not gain.

HONOUR, (the *u* in this word, and all its derivatives and compounds, is dropped in pronunciation; as, *hónŏr*, *hónŏrable*, &c) *s.* [*honor*, Lat.] dignity or high rank. Reputation; fame. Reverence. Chastity. Dignity of mien. Glory; boast. A testimony or token of respect and esteem, used after *do*. The title of a person of rank. A subject of praise. Glory. A regard to the regard and esteem of the world. Nobleness or majesty, applied to persons. A place, office, or title, which attracts esteem. Ornament and respect. "The *honours* of his head." *Dryd.*

To HONOUR, *v. a.* [from *honor*, honour, Lat.] to esteem or respect; to entertain an inward esteem and reverence for any person superior to us in any relation, and to shew it by outward signs and actions.

HONOURABLE, *a.* [*honorable*, Fr.] worthy of respect, or reverence; great, or suitable to a person's dignity; generous; conferring or attracting respect and reverence; without taint or reproach; honest; equitable.

HONOURABLENESS, *s.* highness of post or dignity, which attracts reverence and respect; generosity.

HONOURABLY, *ad.* with tokens of honour; in such a manner as to add dignity to a person's character; generously.

HONOURER, *s.* one that entertains respect and esteem for another in his mind, and shews it in his actions.

HOOD, *s.* [*had*, Sax.] denotes condition, quality, state, or character, as in *childhood*. It is sometimes taken collectively; and then signifies several united together, as *sisterhood*; *i. e.* a company of sisters; *brotherhood*, a fraternity of several of the same profession incorporated.

HOOD, *s.* [*hod*, Sax.] an upper covering worn by a woman over her cap; any thing drawn upon the head, and covering it; a kind of ornament worn by a graduate of an university to shew his degree.

HOODMAN'S-BLIND, *s.* a play in which the person hooded is to catch another, and tell his name, before the bandage is to be removed from his eyes, now called *blindman's buff*.

To HOOD-WINK, *v. a.* to hinder a person from seeing by binding something over his eyes.

HOOF, *s.* [*hof*, Sax. *hoef*, Belg.] the hard, horny substance which covers the feet of horses, and other animals that feed on grass.

HOOFBOUND, *a.* applied to a horse, when his hoof shrinks in at the top and at the heel, and the skin by that means starts above and grows over the hoof.

HOOFED, *a.* having a hoof.

HOOGHLY, a small, but antient city, of Hindoostan, in Bengal. It is now nearly in ruins, but possesses many vestiges of its former greatness. In the time of the Mahometan government, it was the great mart of the export trade of Bengal to Europe. It is seated on the W. side of the river Hooghly, 26 miles N. of Calcutta.

HOOK, *s.* [*hoce*, Sax. *hoeck*, Belg.] any thing bent so as to catch hold. "A shepherd's *hook*; a pot *hook*." A wire crooked and barbed at the point, used in fishing. A snare or trap. Any bending instrument to cut or lop with. "A reaping *hook*." That part of a hinge which is fixed to the posts of a door; hence *off the hooks*, implies a state of disorder or confusion. *By hook or by crook*, a phrase signifying one way or another; by any means, whether direct or indirect.

To HOOK, *v. a.* in fishing, to catch with a hook. Figuratively, to entrap or ensnare; to draw or fasten as with a hook.

To HOP, *v. n.* [*hoppan*, Sax.] to jump or skip lightly; to move by leaps on one leg. Figuratively, to hop or walk lamely, by laying all our stress on one leg; to move; to play.

HOP, *s.* a leap made with one leg; a light or small jump, generally applied to the motion of birds on the ground, or the manner in which they move from one branch of a tree to another, without extending their legs. In botany, a plant whose flower is used as a bitter in brewing, to keep beer from turning sour, from *hop*, Belg.

To HOP, *v. a.* to impregnate with hops; to make bitter with hops.

HOPE, the station at the mouth of the river Thames, below Gravesend.

HOPE, *s.* [*ope*, Sax. *hope*, Belg.] that pleasure which arises in the mind on the thought of the enjoyment of some future good; an expectation of some future good. SYNON. *Hope* has for its object, success in itself, and denotes a trust borne up by some encouragement. *Expect* regards particularly the happy moment of event, and intimates a certainty of its arriving. Thus, we *hope* to obtain things; we *expect* their arriving. What we *hope* for seems to be more a favour or a kindness; what we *expect*, more a duty or obligation. Thus, we *hope* for favourable answers to our demands; we *expect* such as are agreeable to our propositions.

To HOPE, *v. n.* to expect a future good.

HOPEFUL, *a.* full of qualities which produce hope; promising; full of hope or expectation of success. The last sense, though strictly analogical, is seldom used.

HOPEFULLY, *ad.* in such a manner as to raise hope, or encourage an expectation of some future good.

HOPEFULNESS, *s.* the quality which encourages or occasions a pleasing expectation of success, or of some future good.

HOPELESS, *a.* without any expectation of future good. Figuratively, desperately abandoned.

HOTTENTOTS, COUNTRY OF THE, a large region in the southern extremity of Africa, which extends N. by W. along the Coast, from the Cape of Good Hope, beyond the mouth of the Orange River, and from that Cape, in an E. N. E. direction, to the mouth of the Great Fish River, which parts it from Caffraria Proper. There are no considerable kingdoms throughout this large extent of country, the whole being inhabited by different tribes, or nations, governed by honquers, or chiefs, who live, like the Arabs, in huts, or portable houses, and remove their kraals, or villages, whenever the pasture becomes too bare for the subsistence of their cattle, and upon the natural and violent death of an inhabitant. The Hottentots of the Cape consist of a few paltry and miserable hordes, who have not even the power of choosing their own chief, and live, as they can, in different cantons of the colony; but the savage Hottentots, called, by way of derision, the *Jackal Hottentots*, far removed from the government of the Europeans, still preserve their original manners. The Hottentots, in general, are as tall as most Europeans, but more slender, and their hands and feet are small. Their skin is of a yellowish brown hue, somewhat resembling that of an European who has the jaundice in a high degree; but this colour is not at all observable in the whites of the eyes. There are not such thick lips among the Hottentots as among their neighbours the negroes, the Caffres, and the Mozambiques. Their mouth is of the middling size; and they have, in general, the finest set of teeth imaginable. Their heads are covered with hair more woolly, if possible, than that of the negroes. With respect to their shape, carriage, and every motion, their whole appearance indicates health and content. There is a volatility in their manner which shews an abundant flow of spirits, or a high enjoyment of animal life; in their intercourse with Europeans, they hardly stand still for a moment. In their mien, moreover, a degree of carelessness is observable, that discovers marks of alacrity and resolution; qualities which, upon occasion, they certainly can exhibit, as in their encounters with lions and other wild beasts. Not only the men, but the women also are clothed with sheep skins; the wool being worn outward in summer, and inward during the winter. They wear one skin over their shoulders, the ends of it crossing each other before, and leaving their neck bare. Another skin is fastened round their middle, and reaches down to their knees. They besmear their bodies all over, very copiously, with fat, in which there is mixed up a little soot, and this is never wiped off. They likewise perfume themselves with powder of herbs, with which they powder both the head and body, rubbing it all over them, when they besmear themselves. The odour of this powder is rank and aromatic, and comes nearest to that of the poppy mixed with spices. Some of them adorn themselves with necklaces of shells. The women cover themselves much more scrupulously than the men. They seldom content themselves with one covering, but almost always have two, and very often three. These are made of a prepared and well-greased skin, and are fastened about their bodies with a thong, almost like the aprons of European women. The outermost is always the largest, measuring from about six inches to a foot over. This is likewise, generally, the finest and most showy, and is frequently adorned with glass beads, strung in different figures. Both the men and women generally go bareheaded. Neither their ears nor nose are adorned with any pendent ornaments, as they are among other savages. The nose, however, is sometimes, by way of greater state, marked with a black streak of soot, or with a large spot of red lead; of which latter, on their high days and holidays, they likewise put a little on their cheeks. Both sexes wear rings on their arms and legs; most of these are made of thick leather straps, cut in a circular shape; and these have given rise to the almost universally received notion, that the Hottentots wrap guts about their legs, in order to eat them occasionally. Rings of iron, copper, or brass, of the size of a goose quill, are considered as more genteel than those of leather; but the girls are not allowed to use any rings till they are marriageable. The Hottentots seldom wear any shoes; what they do wear, are made of undressed leather, with the hairy side outward; they are rendered soft and pliable, by being beat and moistened, and are very light and cool. Their habitations are some of them of a circular, and some of an oblong shape, resembling a round bee-hive, or a vault; the ground plot is from 18 to 24 feet in diameter. The highest of them are so low, that it is scarcely possible for a middle-sized man to stand upright. But neither the lowness of the hut, nor that of the door, which is barely three feet high, can be considered as any inconvenience to a Hottentot, who finds no difficulty in stooping, and crawling on all fours. The fire-place is in the middle, and they sit or lie round it in a circle. The low door is the only place that admits the light, and, at the same time, the only outlet that is left for the smoke. The Hottentot, inured to it from his infancy, sees it hover round him, without feeling the least inconvenience arising from it to his eyes; while, rolled up like a hedge-hog, and wrapped up snug in his skin, he lies at the bottom of his hut, quite at his ease, in the midst of this cloud, except that he is now and then obliged to peep out from beneath his sheep-skin, in order to stir the fire, or perhaps to light his pipe, or else, sometimes, to turn the steak he is broiling over the coals. The order of these huts, in a kraal, or clan, is most frequently in the form of a circle, with the doors inward; by which means a kind of yard is formed, where the cattle are kept at night. The milk, as soon as it is taken from the cow, is put to other milk, which is curdled, and is kept in a leather sack, the hairy side of which, being considered as the cleanest, is turned inward; so that the milk is never drank while it is sweet. Among other tribes of Hottentots are the Boshiemen, or Boshmans, who inhabit the mountains in the interior part of the country, N. E. of the Cape of Good Hope, and are averse to the pastoral life. Some of their maxims are to live on hunting and plunder, and never to keep any animal alive for the space of one night. On this account they themselves are pursued, and sometimes exterminated, like wild beasts, or taken and made slaves of. Bushes and clefts in rocks serve them by turns for dwellings. Many of them are entirely naked; but some of them cover their body with the skin of any sort of animal, great or small, from the shoulder downward as far as it will reach, wearing it till it falls off their backs in rags. Ignorant of agriculture, they are obliged to wander over hills and dales, after certain wild roots, berries, and plants, which they eat raw. Their table, however, is composed of several other dishes, among which are the larvæ of insects, the caterpillars from which butterflies are produced, the termites, or white ants, grasshoppers, snails, and spiders. With all these changes of diet, the Boshman is, nevertheless, frequently in want. When captured as a slave, he exchanges his meagre fare for the luxury of butter-milk, furmenty, or hasty pudding, and sometimes becomes fat in a few weeks. This good living, however, is soon embittered by the grumbling of his master and mistress, and he must frequently bear, perhaps, a few curses or blows, for neglect and indolence. Disliking labour, and

from his corpulency become less capable of bearing it, he now pines after his former uncontrolled and wandering life, which he generally endeavours to regain by escaping. Another tribe of Hottentots, near the mouth of Orange river, have huts superior to those of the generality of Hottentots; they are loftier, and thatched with grass; and are furnished with stools made of the back-bones of the grampus. Their mode of living is, in the highest degree, wretched, and they are apparently the most dirty of all Hottentot tribes. Their dress is composed of the skins of seals and jackals, the flesh of which they eat. When a grampus is cast ashore, they remove their huts to the place, and subsist upon it as long as any part of it remains; and, in this manner, it sometimes affords them sustenance for half a year, though in a great measure decayed, and putrified by the sun. They smear their skin with the oil, the odour of which is so powerful, that their approach may be perceived some time before they present themselves to view. They carry their water in the shells of ostrich eggs, and the bladders of seals, which they shoot with arrows, the same as the other Hottentots. Though one small hut contains the whole family, and all are obliged to repose together, they are chaste in their manners. Severe in their jurisprudence, they punish murder, adultery, and robbery with death. From the observance of dances or rejoicings at the full and change of the moon, they appear to be idolaters. The country possessed by the Dutch is of a pretty considerable extent, comprehending, not only the large tract between Table Bay and False Bay, but that which is called Hottentot Holland, extending from False Bay to the Cabo dos Agulhas, or Cape of Needles, and the country farther E. beyond St. Christopher's river, called Terra de Natal. The coast of this country abounds in bays and capes; it is naturally mountainous and barren, but the industrious Dutch have overcome all natural difficulties, and it not only produces a sufficiency of all the necessaries of life for the inhabitants, but also of refreshments for all the European ships that touch here. In the interior parts, however, the soil is astonishingly fertile and productive. The Dutch consider the year as divided into two seasons, which they term monsoons; the wet monsoon, or winter; and the dry one, or summer. The first begins with our spring; the latter when our summer ends. In the damp season, the Cape is much subject to fogs; and from the middle of the wet monsoon, it rains almost continually till summer; the weather is cold, raw, and unpleasant; but never more rigorous than autumn in Germany. Water never freezes to above the thickness of half a crown, and, as soon as the sun appears, the ice is dissolved. The Cape is rarely visited by thunder and lightning, excepting a little near the turn of the seasons. Among the quadrupeds of this country are antelopes, which go in herds of 20 or 30,000 each; buffaloes; giraffes, or camelopardalises; the gemsbock, or chamois, a species of antelope, which has remarkably long, sharp, horns, and, when attacked by dogs, will sit on its hind quarters, and defend itself; wild dogs, much larger than the jackal, which travel in herds, and are very destructive to flocks of sheep; elephants; elks; hyenas; the koedo, an animal of a mouse colour, rather larger than our deer, with three white stripes over the back, and the male having very large twisted horns; lions; jackals; tigers; panthers; the quacha, a species of the zebra, but more tractable; the double-horned rhinoceros; horses; domestic horned cattle; common sheep; and a peculiar species of sheep, which are covered with hair instead of wool. The hippopotamus, or river-horse is frequently seen here. Among the birds are vultures; ostriches, whose eggs are excellent food; and the loxia, a species of gregarious birds, which builds its curious nest in the mimosa tree, where it forms a kind of thatched house, with a regular street of nests on both sides, at about two inches distance from each other, and containing under its roof several hundred, or a thousand birds. The termites, or white ants, which do no injury to the wood, as in the East Indies, but only to the grass, the destruction of which they occasion, by raising a number of hills, which impede the progress of vegetation. The Hottentots eat them; and this food is found to be far from disagreeable. The locusts also are esteemed excellent food by the Boshmans, by whom they are dried and kept for use. The black, or rock scorpion, is nearly as venomous here as any of the serpent tribe, of which there are numerous kinds. There are six species about the Cape; namely, the horned snake, about 18 inches long, the most poisonous of them all; the kouse band, or garter snake, about the same length, dangerous to travellers, on account of resembling the soil so much in colour, that it is not readily perceived; the yellow snake, which differs in colour only from the hooded snake of India, and being from four to eight feet in length, their size, and bright yellow colour, renders it easy to avoid them; the puff adder, about 40 inches in length, so called from blowing itself up to near a foot in circumference; the spring adder, very dangerous, but not common, from three to four feet long, and of a jet black, with white spots; and the night snake, more beautiful than any of the others, about 20 inches long, very thin, belted with black, red, and yellow, and when near, at night, has the appearance of fire. The country of the Hottentots lies between the tropic of Capricorn, and 35 degrees S. lat. and is bounded on the W. S. and E. by the Atlantic and Indian Oceans, and on the N. by regions very little, if at all, explored.

HOVAL, or OUALO, a kingdom of Africa, on the banks of the Senegal, extending about 90 miles from E. to W. and 18 from N. to S. The soil is fertile in maize, rice, legumes, indigo, tobacco, and cotton; the meadows feed great numbers of large and small cattle, whose flesh is excellent; game is plentiful, and birds are in the greatest number and variety; and the forests abound with palm-trees.

HOY, *s.* [*hoa*, old Fr.] a small vessel, whose sails are neither square nor cross, like other ships, but mizen, so that she can sail nearer the wind than another vessel can.

HOY, one of the Orkney islands, situated between the Island of Pomona and the N. coast of Caithness-shire. It is about 11 miles long, and more than 3 broad. On this island, besides the great conic hill of Hoyhead, which is a sea-mark, there is a stupendous rock, called the Beary, where a bird, here named the layer, supposed to be a species of the penguin, is found. It is about the size of a small duck, remarkably fat, and esteemed a great delicacy. These birds burrow in the rabbit holes. The person employed in taking the young is usually let down by a rope from the top of the precipice. In this island too, in a gloomy valley, is an entire stone, 36 feet long, and 18 broad, called the Dwarfie Stone. It is hollow within, having the form of a bed and pillow cut in the stone; it is supposed to have been once the habitation of a hermit. Lat. 58. 56. N. lon. 3. 20. W.

To HOYSE, *v. a.* among mariners, to hale up any thing. See HOIST.

HUDDERSFIELD, a town in the West Riding of Yorkshire, which has risen to consequence within this century. It is a sort of mart for narrow cloths, fine and coarse, fine broad cloths, serges, kerseymeres, &c. and is situated on the Calder, amid barren moors, 25 miles N. E. of Manchester, 42 S. W. of York, and 189 N. N. W. of London. Its market is on Tuesday, when the cloth is exposed for sale in a large hall, and merchants and wool-staplers attend from a considerable distance.

To HUDDLE, *v. a.* to dress up close in order to disguise; to dress in a hurry, or put one's clothes on carelessly and in haste. Figuratively, to cover up in haste; to perform in a hurry; to join together in a confused and improper manner. Neuterly, to come in a crowd or hurry.

HUDDLE, *s.* a confused crowd or mixture; a crowd assembled together in a hurry; a tumult.

HUDSON'S BAY, a large bay of North America, lying between 51 and 67 degrees of N. latitude, and discovered, in 1610, by Captain Henry Hudson. This intrepid mariner, in searching for a N. W. passage to the South Sea, discovered three straits, through which he hoped to find out a new way to Asia by America. He had made two voyages before on the same adventure; the first in 1607, and the second in 1608. In this third and last, in 1610, he entered the straits that lead into this new Mediterranean, the bay known by his name; and coasted a great part of it. His ardour for the discovery not being abated by the difficulties he struggled with in this empire of winter, and world of frost and snow, he staid here till the ensuing spring, and prepared, in the beginning of 1611, to pursue his discoveries; but his crew, who suffered equal hardships, without the same spirit to support them, mutinied, seized upon him, and seven of those who were most faithful to him, and committed them to the icy seas in an open boat. Hudson and his companions were never more heard of; but the ship, and the rest of the men, returned home. Other attempts towards a discovery were also made in 1612 and 1667. In 1746, a Captain Ellis wintered as far north as 57 degrees and a half; and a Captain Christopher attempted farther discoveries in 1761. The country lying round Hudson's Bay on the W. and S. W. is called New North and New South Wales. The extensive peninsula to the E. of it is called Labradore, or New Britain. The entrance of the bay from the ocean, after leaving Cape Farewell and Davis's Straits, is between Resolution Isles on the N. and Button's Isles on the S. forming the eastern extremity of the straits, distinguished by the name of its first discoverer. The vast countries that surround Hudson's Bay abound with animals, whose skins and furs are far superior in quality to those found in less northerly regions. In 1670, a charter was granted to a company, which does not consist of above ten persons, for the exclusive trade to this bay, and for planting the country; and they have acted under it ever since with great benefit to themselves, but little comparative advantage to the kingdom at large. Of late years, however, the fur trade, from the inland parts, has been carried on to a much greater extent than it was before. This has been chiefly occasioned by the interference of the Canada traders, who had effectually supplanted the company on the seashore, supplying the natives with every convenience for war and domestic uses. This induced the company, in 1773, to begin their inland voyages, and now the Canadians from Canada, and the Europeans from Hudson's Bay, frequently meet together. The servants of the company, however, imported principally from the Orkney Isles, having ingratiated themselves into the confidence of the natives, from their prudent proper behaviour, and incorruptible honesty, have evidently the advantage of trade on their side. They consequently export a greater quantity of furs (in proportion to the goods imported,) and these in better preservation and more valuable. They employ 4 ships, and about 130 seamen, and have several forts; namely, Prince of Wales' Fort, Churchill River; York Fort, Nelson River; New Severn; and Albany; which are all seated on the W. S. W. side of the bay.

HUDSON'S RIVER, one of the finest rivers in North America, rising in a mountainous country, in the N. E. part of the state of New York, about half way between the Lakes Ontario and Champlain. It waters Albany and Hudson, and proceeds, in a southerly direction, almost its whole course to the Atlantic Ocean, which it enters at York Bay, 10 miles S. of New York, after a course of 250 miles. The tide flows a few miles above Albany, which is 160 miles from New York. It is navigable for sloops of 70 or 80 tons, to Albany, and for ships to Hudson.

HULL, *s.* [from *helan*, Sax.] the husk or outward covering of corn or any other thing. The body of a ship. Though *hulk* and *hull* be now used promiscuously, *hulk* seems, according to Johnson, to have been formerly applied not only to the body or hull, but likewise to a whole ship of burden.

To HULL, *v. n.* to float; to drive to and fro upon the water without sails or rudder. "He looked, and saw the ark *hull* on the flood." *Par. Lost.*

HULL, or KINGSTON UPON HULL, a large, closely-built, well-paved, and exceeding populous town, in the East Riding of Yorkshire, seated on a river called the Hull, which rises not far from Driffield, and here enters the river Humber. Its commerce has been constantly increasing so much of late years, that it is now probably become the fourth port in the kingdom. Its situation is extremely advantageous; for, besides its communication with the Yorkshire rivers and canals, it has access also, by the Humber, to the Trent, and all its branches and communications. Hence it has the import and export trade of many of the northern and midland counties. By the late inland navigations, it has also a communication with the rivers Mersey, Dee, Ribble, Severn, Thames, Avon, &c. which navigation, including its windings, extends above 500 miles in the counties of Lincoln, Nottingham, York, Lancaster, Westmoreland, Chester, Stafford, Warwick, Leicester, Oxford, Worcester, &c. The foreign trade is chiefly to the Baltic; but it has also a regular traffic with the southern parts of Europe, and with America. More ships are sent hence to Greenland, than from any other port, that of London excepted. The coasting trade, also, for coal, corn, wool, manufactured goods, &c. is very extensive. The harbour is chiefly artificial, consisting of a dock, the largest in the kingdom (finished in 1778) with which the river communicates, and in which 800 ships may ride safely and conveniently. Among the public buildings are, the Trinity House, for the relief of seamen and their widows; an exchange; and a town hall. The grand stone bridge over the river, to Holderness, was rebuilt in 1787, and consists of 14 arches. It is 36 miles S. E. of York, and 173 N. of London. Markets on Tuesday and Saturday.

HU'MPBACK, *s.* a crooked back, or a back which has a kind of hump or knob swelling above the other parts of its surface.

To HUNCH, *v. a.* [*husch*, Teut.] in its primary sense, to give a blow with the fist. At present it signifies to push, as with the elbow.

HU'NCHBACKED, *a.* having a hump or crooked back.

HU'NCHED, *a.* in botany, swelled out, as the under part of the blossoms of the foxglove, the blossom of the honeysuckle, the cup of the turnip, &c.

HU'NDRED, *a.* [*hundred*, Sax.] a number consisting of ten times ten. Substantively, it implies a division of a county, perhaps so called from containing a hundred securities for the king's peace, from *hundred*, Sax. a body of one hundred men. Likewise a measure or certain quantity of things; a *hundred of salt*, at Amsterdam, is 14 tons. A *hundred of deal boards* consists of six-score, *i. e.* 120, which is likewise called the *long hundred*.

HU'NDREDTH, *a.* [*hundreonteogotha*, Sax.] the ordinal of a hundred, or that which has ninety-nine placed before it.

HUNG, preter. and part. pass of HANG.

HU'NGARY, a kingdom of Europe, lying along the river Danube, about 600 miles in length, and about 250 in breadth. It is bounded on the N. by Poland, on the W. by Germany, and on the E. and S. by Turkey in Europe. It comprehends three large provinces, namely, Proper Hungary, which is bounded on the N. by Poland, on the W. by the circle of Austria, on the S. by the river Drave, which separates it from Sclavonia, and by the Danube, which parts it from Turkey in Europe; and on the E. by Walachia and Transylvania. The other parts are Transylvania and Sclavonia. The principal rivers are, the Danube, the Save, the Drave, the Tresse, the Maros, the Raab, the Waag, the Gran, and the Zarwiese. They are so full of fish, that they give them to the hogs; but the waters are all unwholesome, except that of the Danube. The air is very unhealthy, occasioned by the lakes and bogs, insomuch that there is a sort of plague visits them every three or four years, on which account it is called the grave of the Germans. It abounds in all the necessaries of life, and the wine, especially that called Tokay, is excellent. There are mines of gold, silver, copper, and iron; and they have such plenty of game, that hunting is allowed to all. The inhabitants are well shaped, brave haughty, and revengeful. Their horsemen are called Hussars, and their foot Heydukes. Almost all the towns of Hungary have two names, the one German and the other Hungarian, and the language is a dialect of the Sclavonic. The government is hereditary in the house of Austria, and the established religion is popery, though there are a great number of protestants, who have here been severely persecuted; but who now have toleration. No country in the world is better supplied with mineral waters and baths; and those of Buda, when the Turks had it in possession, were reckoned the finest in Europe. Buda is the capital town of Lower Hungary, and Presburg of the Upper.

HU'NGARY-WATER, *s.* a distilled water prepared from the tops or flowers of rosemary, so denominated from a queen of Hungary, for whose use it was first made.

HU'NGER, *s.* [Sax.] the pain felt on fasting long; a desire of food. Figuratively, any violent desire.

HUNTING, *s.* the exercise or diversion of pursuing fourfooted beasts of game. With us this is chiefly performed with dogs, and the chases are the hart, buck, roe, hare, fox, badger, and otter.

HUNTINGDON, called by the Saxons HUNTER'S DOWN, the county town of Huntingdonshire, has 2 churches, several good inns, a handsome market-place, and a good grammar-school. It was once very large, having 15 churches, which, in Camden's time, were reduced to 4, and now to 2; and it is still a populous, trading place. It is seated on the river Ouse, over which it has a handsome stone bridge, leading to Godmanchester, on the great N. road, 16 miles W. by N. of Cambridge, and 65 N. by W. of London. Markets on Monday and Saturday.

HUNTINGDONSHIRE, a county of England, bounded on the W. and N. by Northamptonshire, on the N. E. and E. by Cambridgeshire, and on the S. by a part of Cambridgeshire and Bedfordshire. It extends 22 miles from N. to S. and about 18 from E. to W. The principal rivers are the Ouse and Nen. It is divided into 4 hundreds, which contain 5 market towns, 78 parishes, 279 villages, about 8220 houses, and upwards of 49,000 inhabitants. The borders of the Ouse, which flows across the S. E. part, consist of fertile and very beautiful meadows. The middle and western parts are finely varied in their surface, fertile in corn, and sprinkled with woods. The whole upland part was, in antient times, a forest, peculiarly adapted for hunting, whence the name of the county took its rise. The N. E. part consists of fens, which join those of Ely; but they are drained, so as to afford rich pasturage for cattle, and even large crops of corn; and in the midst of them are shallow pools, abounding with fish. The largest of these is a lake of considerable size, called Whittlesea Mere. The air is good, except in the fenny parts, which are aguish. Its chief commodities are corn, malt, and cheese; and they fatten abundance of cattle.

HUNTINGHORN, *s.* a bugle; a horn used to cheer the hounds.

HUNTRESS, *s.* a woman that follows the chase, or pursues animals for sport.

HYTHE. See HITHE.

I & J.

I IS the ninth letter, and third vowel, of the alphabet. Its sound varies; in some words it is long, as in *fine, shine, thine*, which are usually marked with *e* final, but not always, as in *high, mind, sign*, &c. in some short, as in *thin, win, sin, bid, hid*, &c. In others, it is pronounced like *y*, as in *collier, onion*, &c. When prefixed to *e*, it makes a diphthong of the same sound with the soft *i*, or *ee*; thus *field, yield*, are spoken as *feeld, yeeld*; it has the same sound in *machine, magazine*, &c. Subjoined to *a* or *e*, it makes them long, as *fail, neigh*, &c. No English word ends in *i*, *e* being either added to it, or else the *i* turned into a *y*. *I* consonant has invariably the same sound with that of *g* in *giant, genius*, &c. as *jade, jump, jerk*, &c. *I*, as a numeral, stands for only one, and so many units as it is repeated times, as I. II. III. is one, two, three; and when put before a higher numeral, subtracts itself, as IV. four, IX. nine, &c. but when set after it, so many are added; thus VI. is 5 and 1, or six; VII. 5 and 2, or seven; VIII. 5 and 3, or eight. The antient Romans likewise used ↀ for 500, ↀI for 1000, IↃↃ for 5000, CCIↃↃ for 10,000, IↃↃↃ for 50,000, and CCCIↃↃↃ for 100,000. Farther than this they did not go in their notation, but, when necessary, repeated the last number, as CCCIↃↃↃ, CCCIↃↃↃ, for 200,000, and so on.

I, pronoun personal, [Sax.] used by a person when speaking of, or describing an action to, himself. Sometimes it is used instead of *ay, yea*, or *yes*; from *ia*, Sax. "*I*, Sir, she took them and read them in my presence." *Shak.*

To JA'BBER, *v. n.* [*gabberen*, Belg.] to talk idly, or without thinking; to prate or chatter; to talk inarticulately, so as not to be understood.

JA'BBERER, *s.* one who talks too fast, or so inarticulately as not to be understood.

JABIRU, *s.* in ornithology, a large water-bird, which has some resemblance to the crane, and inhabits South America.

JACANA, *s.* in ornithology, a beautiful Brasilian bird, which has a remarkable membrane on its head, and is somewhat like the moor hen.

JACCA, a very antient city of Arragon, capital of a district, which includes near 200 towns and villages. It is situated on the river Arragon, 45 miles N. by E. of Saragossa.

JA'CENT, *a.* [from *jaceo*, to lie down, Lat.] lying at length.

JACINTH, *s.* the same with the hyacinth. A gem of a deep reddish yellow, approaching to a flame colour, or the deepest amber.

JACK, *s.* [the diminutive of *John*] a general term of contempt for a saucy or paltry person. "These bragging *Jacks*." *Shak.* The instrument with which boots are pulled off, or spits are turned. A young pike, applied to fish. A cup of waxed leather. A coat of mail, from *jacque*, Fr. A small bowl thrown out for a mark to bowlers. The colours or ensign of a ship. In music, a piece of box fitted with a quill, which, being moved by fingering the pieces of ivory, moves against the wire, and sounds a spinnet, or harpsichord, &c. Joined to the names of animals, when both sexes are signified by one word, it implies the male, as a *Jack ass*.

JACKA'L, (*jackáll*) *s.* [*chacal*, Fr.] in zoology, an animal of the dog kind, vulgarly called the lion's provider.

JACK-A-LA'NTHORN, *s.* [for *Jack with a lanthorn*, because it resembles a person going with a lanthorn and candle] a fiery meteor, which resembles the light of a candle at a distance; the reflection of the sun-beams thrown by means of a looking-glass upon a wall.

JACK-A-LENT, *s.* a simple, sheepish fellow.

JA'CKANAPES, *s.* a monkey or ape. Figuratively, a coxcomb, or pert impertinent fellow.

JACKBO'OTS, *s.* large thick boots, used by the horse of an army to defend the legs.

JACK, BY THE HEDGE, *s.* in botany, a species of erysimum, called also garlick, wormseed, or sauce alone.

JACKDAW, *s.* a blackish bird, taught to imitate the human voice.

JA'CKET, *s.* [*jacquet*, Fr.] a short coat; or kind of waistcoat, worn by women for the upper part of their riding dress, &c. *To beat one's jacket*, is to thrash or beat a person.

JACK-KETCH, *s.* a name given by the vulgar to the public hangman or executioner.

JACK PUDDING, *s.* a person who plays tricks and other pleasantries, in order to divert a mob.

JA'CKSON, PORT, a large bay on the coast of New South Wales, about 12 miles N. of Cape Banks, thought to be the finest harbour in the world. The capes at its entrance, which is less than 2 miles across, are high perpendicular cliffs, and within it gradually expands into a noble bason, with soundings sufficient for the largest vessels, and space to accommodate, in perfect security, a greater number than ever were assembled at one station. Ships may lie in 5½ fathoms within 50 yards of the shore, and the channel, (the surface of which is as smooth as a fish-pond) has mostly 15 fathoms, gradually shoaling farther up. It runs, chiefly in a western direction, about 13 miles into the country, and contains at least a hundred small coves, formed by narrow necks of land, the projections of which afford complete shelter from all winds. Sydney Cove lies on the S. side of the harbour, between 5 and 6 miles from the entrance. There is an abundance of fish in the harbour, most of which are unknown in England, besides oysters, cockles, and other shell fish.

JA'COB'S LADDER, *s.* the same with the Greek valerian.

JA'COB'S STAFF, *s.* a pilgrim's staff, so called from the pilgrimage made to St. James at Compostella. In astronomy, a cross-staff, used for taking heights, so called in allusion to the ladder in Jacob's dream.

JA'COBINE MONKS, *s.* the same as the Dominicans. Also the name given to the party in France, who were most zealous in giving the revolution a turn towards republicanism, and the government of terror and cruelty; so called from their assembling in a house formerly inhabited by the Jacobine friars.

JA'COBITE, *s.* a name given to those who adhered to the interests of king James II. and his family.

JACO'BUS, *s.* an antient gold coin worth 25 shillings.

JACULA'TION, *s.* [from *jaculum*, a dart, Lat.] the act of throwing a dart, or other missive weapon.

JADE, *s.* [etymology doubtful] a horse of no spirit or value; a tired horse. Figuratively, a woman of bad character; generally used as a term of contempt, noting sometimes age; generally vice; but when applied to a young woman, it expresses rather irony than reproach. In natural history, a species of jasper, of extreme hardness, of a colour composed of a pale bluish gray, or ash-colour, and a pale green intermixed. It is used by the Turks for handles of sabres.

To JADE, *v. a.* to tire or make weary; to overbear, or harass like a horse that is over-ridden. To ride or tyrannize over.

JA'DISH, *a.* used with *trick*, mischievous, applied to the qualities of a vicious horse. Unchaste, applied to women.

JA'EN, a tolerably large city of Andalusia, capital of a province of the same name. It is situated on a small river, which soon after runs into the Guadalquiver, 36 miles N. of Granada, and 45 E. of Cordova, Lat. 37. 53. N. lon. 3. 40. W.

JA'FFA, an antient, decayed town of Asia, on the coast of Palestine, formerly called JOPPA. The inhabitants are Turks or Arabs, with a mixture of Greeks, Maronites, and Armenians. The houses are small, and surrounded with the ruins of the antient walls and towers. The antient harbour is destroyed, but there is a good road. Here pilgrims, &c. pay for permission to visit the Holy Land. The whole coast, from hence to Damietta, in Egypt, is entirely desert and wild, without a single port. It is 38 miles N. W. of Jerusalem. Lat. 31. 45. N. lon. 35. 55. E

To JAGG, *v. a.* [*gagaw*, slits or holes, Brit.] to hack or cut into slits and notches, like the teeth of a saw.

JAGG, *s.* any thing resembling the teeth of a saw; an escallop.

JA'GGY, (the *g* is pron. hard) *a.* of an uneven surface; having extremities resembling the teeth of a saw.

JA'GGEDNESS, (the *g* is pron. hard) *s.* unevenness at the extremity; having its extremities resembling the teeth of a saw.

JA'GHIRE OF THE CARNATIC, a tract of land, in the peninsula of Hindoostan, subject to the English East India Company. Its extent along the Bay of Bengal, from Madras to Lake Pullicate on the N. to Alemparve on the S. and to Conjeveram on the W. being 108 miles along the shore, and 47 inland, in the widest part. The term Jaghire means a grant of land from the sovereign to a subject, revokable at pleasure, but generally a life rent. It contains 2440 square miles, and its revenue is about 150,000£ per annum.

JA'GO, ST. one of the largest, most populous, best cultivated, and most fertile of the Cape de Verd Islands, on the coast of Africa. It lies about 6 leagues westward of the island of Mayo, and is about 60 miles in circumference. The people, in general, are black, or, at best, of a mixed colour, except a few of the better rank. Cotton is produced in such abundance in this island, that, besides the large quantities sent to Brazils, and sold by the Portuguese to the other European nations, the natives are, in general, clothed with this manufacture. Here are vines, of which they make a wine that is not contemptible; but as they are supplied with better by the European shipping, it has fallen into disrepute. The chief fruits of the island, besides a profusion of plantains, are citrons, lemons, oranges, musk, and water-melons; limes, bananas, guavas, pomegranates, pompions, quinces, custard-apples, papas, tamarinds, pine apples, cocoa-nuts, tar apples, and sugar-canes. The animals are cows, horses, asses, mules, deer, goats, hogs, civet-cats, and black-faced, well-proportioned monkeys, with long tails. Of the feathered kind, there are cocks, hens, ducks, Guinea hens both tame and wild, parroquets, parrots, pigeons, turtle doves, crab-catchers, curlews, and a great variety of others, valuable only for their plumage. They have also some cedar trees, and plenty of Indian corn. It is, in general, very high land; but were it not for the continual rains in the time of the travadoes, which render it unpleasant, and unwholesome to strangers, it would be as delightful an island as any in the world. The chief towns are St. Jago and Praya. Lat. 14. 54. N. lon. 23. 30. W.

JA'GO, ST. a considerable town of S. America, capital of Chili, with a good harbour, and a royal audience. It is seated in a beautiful and fertile plain, on the river Mapocho, which runs across it from E. to W. Here are several canals, and a dyke, by means of which they water the gardens and cool the streets. It is subject to earthquakes. Lat. 34. 10. S. lon. 71. 5. W.

JA'GUAR, *s.* in zoology, a spotted South American animal, otherwise called the Brasilian tiger.

JAIL, *s.* (formerly written *jaole*,) [of *geol*, Fr.] See GAOL. a place where criminals or debtors are confined.

JA'ILBIRD, *s.* a person who has been confined in a prison for some time.

JAILER, *s.* one who has the care of a prison.

JAKES, *s.* of uncertain etymology; a place where persons answer the calls of nature, and deposit their excrements, called by the Londoners a *house of office*.

JA'LAP, *s.* [*jalap*, Fr. *jalapium*, low Lat.] a firm and solid root of a wrinkled surface, a faintish smell, and acrid taste. It is an excellent purge in all cases where serous humours are to be evacuated, was not known in Europe till after the discovery of America, and received its name *jalap*, or *jalop*, from *Xalapa*, a town in New Spain, near which it was discovered.

JAM, *s.* the etymology unknown; a tart, or conserve of fruits boiled with sugar and water.

JAMAI'CA, an island of the West Indies, discovered by Christopher Columbus, in 1494, 37 miles S. of Cuba, and 56 W. of St. Domingo. It is about 120 miles in length, and 42 where broadest. It is of an oval figure, and grows narrower from the middle, till it terminates in two points at the extremities of the island. It contains between 4 and 5,000,000 of acres, and is divided by a ridge of hills, which runs nearly from E. to W. from sea to sea. Here abundance of fine rivers take their rise, and flow from both sides in gentle streams, refreshing the valleys, as they glide along, and furnishing the inhabitants with sweet and cool water. They are well stored with excellent fish of various kinds, not known in Europe; and they have eels and crawfish in great plenty, not unlike ours. None of these rivers are navigable, even for barges; but some of them are so large, that the sugars are carried upon them in canoes from the remote plantations to the sea-side; others of them run under ground for a considerable space, particularly the Rio Corbe and the Rio Pedra. The mountains, and indeed the greatest part of the island, are covered with woods, which never lose their verdure, but look green at all times of the year; for here is a perennial spring. There are a thousand different kinds of trees adorning the brow of every hill, irregularly mixing their different branches, appearing in gay confusion, and forming groves and cool retreats. Among these are the liguum vitæ, the cedar, and the mahogany trees. In the valleys are sugar-canes, and such a variety of fruit trees, as to make the country look like a paradise. But to balance these advantages, there are dreadful alligators in the rivers; guanoes and galliwasps in the fens and marshes; and snakes, and noxious animals, in the mountains. The days and nights are almost of an equal length all the year round. There are two springs, or seasons, for planting grain, and the year is distinguished into two seasons, the wet and the dry. July, August, and September, are called the hurricane months, because then these dreadful tempests are most frequent, and there is lightning almost every night. Not above one half of the island is cultivated, all the plantations being by the sea-side. Here and there are savannas, or large plains, where the original natives used to plant their Indian corn, and which the Spaniards afterwards made use of for breeding their cattle; but these are now quite bare and barren. The houses are generally built low, being only one story, on account of the hurricanes and earthquakes; and the negroes live in huts made of reeds, which hold only two or three persons. The common drink is Madeira wine, or rum punch. The common bread, or that which serves for it, is plantains, yams, and cassava-roots. The yams are like potatoes, only coarser, and of a much larger size. But in 1793, a great number of the bread-fruit trees were brought here from the island of Otaheite, by Captain Bligh, in the Providence frigate. The cinnamon-tree thrives here extremely well: the first of these trees seen in that part of the world, was obtained out of a French ship captured by Admiral Rodney; this yielded seeds in abundance, and many plants have been raised from them, which prosper exceedingly in the cultivated parts of the island. Hogs are plentiful, and their mutton and lamb pretty good; but the servants generally feed upon Irish salt-beef, and the negroes have herrings and salt-fish. The current coin is all Spanish money. The general produce of this island is sugar, rum, ginger, cotton, indigo, pimento, chocolate, several kinds of woods, and medicinal drugs. They have some tobacco, which is but indifferent, and used only by the negroes. They have no sorts of European grain; but they have Indian corn, Guinea corn, and pease of various kinds, but none like ours; with a variety of roots. Fruits are in great plenty, such as Seville and China oranges, common and sweet lemons, shadocks, citrons, pomegranates, mammes, soursops, papas, pine-apples, star-apples, prickly pears, alicada pears, melons, pompions, guavas, and many other sorts. The common distempers are, fevers, fluxes, and the dry gripes. Jamaica is divided into 3 counties, Middlesex, Surry, and Cornwall, which contain 6 towns and 27 villages. The

legislature consists of a governor, appointed by the king; a council; and a house of assembly. In 1787, the number of negroes amounted to about 250,000, the whites to 30,000, the freed negroes and people of colour to 10,000, and the Maroons who have been since transported to Nova Scotia) to 1400. In the same year the exports amounted, in the whole, to the sum of 2,136,442*l*. 17*s*. 3*d*. sterling, at the current London prices, and the imports to the sum of 1,496,232*l*. 5*s*. 4*d*. The principal town is Kingston; but St. Jago de la Vega, or Spanish Town, is the seat of government. In 1655, Jamaica was taken from the Spaniards by the English, under Penn and Venables.

JAMB, *s.* [*jambe*, a leg, Fr.] any supporter, particularly applied to those on each side a door, &c.

IA'MBIC, *s.* [*iambicus*, Lat.] verses composed of iambic feet, or a short and long syllable; and being generally used in satirical compositions, is figuratively applied to signify satire.

JAMES VI. of Scotland succeeded to the English throne by the name of James I. upon the death of queen Elizabeth, March 24, 1603, being then in the 37th year of his age, and having been king of Scotland ever since he was a year old, on the deposition of queen Mary his mother, who was the daughter of James V. son to James IV. by Margaret eldest daughter of our king Henry VII. He set out from Edinburgh April 5th, and was received with such extravagant expressions of joy, as soon as he set foot in England, that an honest Scotchman said bluntly, "This people will spoil a good king;" and the king issued out a proclamation, to restrain the people from flocking to him in such numbers. On the 7th of May he arrived at London, having in his journey made about 200 knights; and soon after his arrival he made many more, and indeed was very liberal in conferring titles of all kinds. On the 19th of March the parliament met, when he recommended to them very strongly the union of the two kingdoms of England and Scotland; but the king's partiality to his Scotch courtiers so raised the jealousy of the English that it came to nothing. The commons, on June 6, presented an address to the king complaining of certain grievances, representing their privileges, which they supposed him not thoroughly acquainted with, because he had interfered in the debates about controverted elections, which they claimed the sole privilege of determining. But this address he took so ill, that soon after he prorogued the parliament to February. In the mean time he concluded a peace with Spain. The parliament, which was to have met in February, 1605, was further prorogued to Nov. 5, when a plot was discovered of a design to blow up the parliament-house; 36 barrels of gunpowder being put in a cellar, under the lord's house, which had been hired for that purpose, and covered over with coals, billets, and faggots. Guy Faux, who was to have set fire to the train, was discovered in a cloak and boots, with a dark lanthorn, tinder-box, and matches in his pocket. Himself with his accomplices were executed in January following; as were not long after Oldcorn and Garnet, two Jesuits, for concealing and abetting the plot. In 1607, a new translation of the Bible, viz. that now in use, was begun, and published in 1611. Matters did not go very smooth between the king and the parliament in 1610. The commons began to complain of several grievances, such as the king's profuseness in enriching his courtiers, especially the Scots, his regard to the Roman Catholics, and the rigorous proceedings of the high-commission court. The king sent for both houses, and endeavoured to vindicate himself in a speech; in which, however, he used such extravagant expressions concerning the kingly power, as were more agreeable to an absolute monarchy than the English constitution. During this session, Henry, the king's eldest son, was created prince of Wales, as prince Charles had a good while before been duke of York. Upon Henry IV. king of France being stabbed by Ravaillac at the instigation of the Jesuits, king James, by a fresh proclamation, banished all Jesuits and priests out of the kingdom, and forbad all recusants, that is, such as refused to take the new oath of allegiance, to come within ten miles of the court. Robert Cecil, a man of great abilities, had been prime minister from the beginning of his reign; though all that while the king had, properly speaking, no particular favourite; but in 1611, he took into his good graces a young Scotch gentleman, of about 20 years of age, whose name was Robert Carr. He was a person of but small parts, and no learning, but airy and gay, and of a comely and graceful presence; qualities very taking with king James. The king made him a gentleman of his bedchamber, and some time after treasurer of Scotland, baron of Branspeth, and viscount Rochester; making him also a privy counsellor and knight of the garter; and nothing was done at court without the advice of the viscount Rochester. The latter end of the year 1612, Frederic V. elector palatine, came into England to marry the princess Elizabeth, the king's only daughter. On November 6 this year died, in the 19th year of his age, Henry prince of Wales, of whom historians gave an extraordinary character. Feb. 5, 1613, the marriage between the elector and the princess was solemnized, on which occasion there was a continued course of entertainments, balls, masquerades, and other diversions, at court, till April, when the illustrious pair set out for Germany. There having been no parliament these four years, the king and his ministers were continually inventing new ways to raise money, as by monopolies, benevolences, loans, and other illegal methods, which occasioned great murmurs and complaints. Among other expedients he sold titles; made a number of knights of Nova Scotia, each of which paid him such a sum; and instituted a new order of knights baronets, a sort of middle nobility between barons and knights-bachelors, which was to be hereditary; for which honour each person paid 1095*l*. But the king still wanting money, a parliament was called, which met on April 16, 1614. The commons, instead of granting money first, as was expected, fell presently upon grievances; such as the ill uses made of the revenue; the increase of papists by the encouragement of the court, monopolies, and levying money without consent of parliament; upon which grievances they resolved to present an address; but the king, not liking such proceedings, dissolved the parliament June 7, without one statute being enacted. In 1615, the king was taken with a new object, George Villiers, which cooled his affection for his old favourite, and his ruin was completed by the discovery of the murder of Sir Thomas Overbury. By the disgrace of Somerset, Villiers became sole favourite. The king soon created him lord Weddon, viscount Villiers, and earl of Buckingham. His mother though a papist, was created countess of Buckingham; and she governing her son as he governed the king, the papists met with great encouragement, and began to swarm in the kingdom. He was soon after made marquis of Buckingham, and lord high admiral, though he had never been at sea, but between Dover and Calais. The king having the most extravagant notions of his prerogative, and being wholly influenced by this vain, inexperienced, and presumptuous young man, it is no wonder that the rest of this reign, like the former, was one continued scene of mismanagement. By this means two parties were formed in the nation, one for the court, and the other for the people. Prince Charles, now the king's only son, was created prince of Wales in 1616. The king was desirous of marrying him, and a negociation, which lasted several years, was carried on with the court of Spain, for a marriage between him and the infanta, daughter of Philip III. king of Spain, during which time Gondemar, the Spanish ambassador in England, had vast influence at court. The king, being in want of money, delivered up, to the states of the United Provinces, the cautionary towns, Brill, Rammekins, and Flushing, which were put into queen Elizabeth's hands, as a security for the repayment of the expenses she had been at, for 2,728,000 florins, in lieu of a debt of 8,000,000, which they were obliged to pay the late queen or her succesrors, besides 18 years' interest for the same. In 1619, queen Anne, the king's consort, died of a dropsy, in the 46th year of her age. In 1619 the states of Bohemia, who were mostly

protestants, refusing to own Ferdinand, who had been elected emperor, as their sovereign, chose Frederic, elector palatine, son-in-law to king James, for their king, who was crowned on November 4 following. A war ensuing, king James refused to assist his son-in-law, who in the battle of Prague, November 7, 1620, was totally routed by the imperial and Bavarian troops, and forced to fly with his queen and children into Holland. The murmurs of the people about the palatinate occasioned the calling of a parliament, which met January 30th, 1621. The king, in order to get money, made as if he would have recourse to arms, if other methods failed; and the commons, that they might not seem to be wanting in their zeal for what they so much desired, granted him two subsides; but afterwards, when they saw no preparations making for the war, and yet more money was demanded, instead of readily granting it, they drew up a remonstrance about the increase of popery at home, the state of the prostestant religion abroad, by the neglect of vigorously interposing in the defence of the palatinate, and against the Spanish match. Upon this the commons drew up a petition, and presented it with the remonstrance. The former he received, but rejected the latter, and sent them a long and angry answer to their petition, charging them with usurping upon his prerogative royal, and meddling with things far above their reach; and, in the end, objected to their calling their privileges their antient and undoubted right and inheritance, and wished they had rather acknowledged them as derived from the grace and permission of his ancestors and himself. This the commons would by no means admit; and, therefore, knowing the parliament was going to be dissolved or prorogued, drew up a protestation concerning their privileges, maintaining them to be their undoubted birth-right. The king hereupon sent for the clerk of the house of commons, and commanded him to produce the journal-book; which he having done accordingly, the king with his own hand, in full council, took the said protestation out of the journal, declaring it to be invalid, null, void, and of no effect. Soon after, he dissolved the parliament by proclamation, and committed to prison several of the members who were most active in maintaining their privileges. This open opposition between the king and parliament produced the two parties, who in after times came to be distinguished by the names of Tories and Whigs. On February 19, 1625, the parliament met, and the king, apprehending that a war would ensue on the breaking off the Spanish match, made such a speech to them, as the Prince, and Buckingham, who now affected the patriot, desired. They unanimously advised him to break off the match, though the business had been done before, and gave largely for the war. The king died at Theobalds, March 27, 1625. In the beginning of this king's reign, a new officer, called master of the ceremonies, was instituted for the more solemn reception of ambassadors. James I. was in his stature of the middle size, inclined to corpulency; his forehead was high, his beard scanty, and his aspect mean. His eyes, which were large and languid, he rolled about incessantly, as if in quest of novelties. His tongue was so large, that in speaking or drinking he beslabbered the bystanders. His knees were so weak as to bend under the weight of his body. His address was awkward, and his appearance slovenly. There was nothing dignified either in the composition of his mind or person. In the course of his reign he exhibited repeated instances of his ridiculous vanity, prejudices, profusion, folly, and littleness of soul. All that we can add in his favour is, that he was averse to cruelty and injustice, very little addicted to excess, temperate in his meals, kind to his subjects, and even desirous of acquiring the love of his people, by granting that as a favour which they claimed as a privilege. His reign, though ignoble to himself, was happy to his people. They were enriched by commerce, which no war interrupted. They felt no severe impositions; and the commons made considerable progress in ascertaining the liberties of the nation. In this and the preceding reign England produced a number of excellent poets, such as Spenser, Sidney, Shakespeare, and Jonson; while Bacon excelled in natural philosophy, and Camden flourished as an antiquarian and historian. In the 14th year of this reign, Sir Hugh Middleton, a private citizen of London, supplied part of the city with excellent water, conveyed in an aqueduct from Ware, in Hartfordshire, now known by the name of the New River.

JAMES II. succeeded to the throne of England, February 6, 1684-5, on the death of his brother Charles II. There had been endeavours used to exclude him, by an act of parliament, from the crown, on account of his being a Roman Catholic; but the king, his brother, dissolving the parliament, prevented its passing. On April 23, 1685, the king and queen were crowned. The king would not receive the sacrament, but all the rest was done in the protestant form; his priests doubtless dispensing with him in this as well as in the coronation-oath. The famous Titus Oates was tried the 8th and 9th of May, before lord chief justice Jefferies, for perjury, in relation to two circumstances of his evidence. The witnesses against him were almost all papists, and seminary priests and Jesuits from St. Omer's. He was sentenced to pay 1000 marks on each indictment, to be stripped of his canonical habit, to stand twice in the pillory, and five times a year afterwards as long as he lived; to be imprisoned for life, and to be whipped first from Aldgate to Newgate, and the very next day but one from Newgate to Tyburn; which was executed with the utmost severity, so that he swooned away several times. Thomas Dangerfield was tried soon after, and sentenced to pay 500*l.* to stand twice in the pillory, and to be whipped in the same manner as Oates; which was executed, though with less severity. In England, the parliament (the only one in this king's reign) met May 19, when his majesty promised to preserve the religious and civil rights of his people. The beginning of king James's reign was disturbed by two invasions (one in Scotland, headed by the duke of Argyle, the other in England, in favour of the duke of Monmouth,) the authors of which were both taken and beheaded, the latter in England, and the former in Scotland. Judge Jefferies was sent down into the West to try the prisoners; where he boasted he had hanged more men than all the judges since William the Conqueror. Now every method was taken to establish popery. In Ireland, the privy-council was dissolved, and a new one appointed, with several papists in it, who soon became the majority. Protestant officers were cashiered, and papists put in their room, and the army so modelled by the earl of Tyrconnel, as best to suit the purpose in view. The parliament, after several adjournments, met Nov. 9. The king demanded a supply for keeping up his army, which he had increased to 15,000 men, though the nation was in perfect peace; and bade them not to take exceptions that he had some officers in his army not qualified according to the late tests, declaring his resolution to employ them still. Both houses, and the whole kingdom, were surprised at this speech, and the opposers of the late bill of exclusion began now a little to open their eyes. The commons indeed voted him a supply; but could not relish the employing popish officers in the army, contrary to the known law of the land: and addressed the king against it; at which he was so much offended that he prorogued the parliament, Nov. 20. All the rest of king James's reign, till he met with a providential check from the enterprise of the prince of Orange, was wholly employed in measures to make himself absolute, and establish popery. In April, 1686, he wrote a letter to the parliament of Scotland, desiring them to free his Roman Catholic subjects from the restraints they lay under; and upon their not complying, he dissolved them. In England he got the judges to declare in favour of his dispensing power. This he effected by sending for them one by one, and talking with them privately in his closet, (whence the odious name of closeting took its rise,) by turning out those whom he found refractory, and filling their places with others he found more pliable. He also new-modelled his council, admitting into it the lord Arundel of Wardour, and the lord Bel-

lasyse who had been both impeached for the popish plot, and other Roman Catholics, among whom was father Peter, his confessor. And now every thing was hurrying on to establish the Roman Catholic religion. The king had an army of 15,000 men encamped on Hoanslow-heath, under the earl of Feversham; and in the camp was a public chapel, where mass was said every day. This seemed plainly to indicate, that he intended to make use of force, if he could not bring his measures to bear without it; which put the Rev. Mr. Johnson upon publishing an address to the protestant officers and soldiers in the army, exhorting them not to be the tools of the court for subverting their religion and liberties. For this, after having been solemnly degraded, he was whipped from Newgate to Tyburn, stood thrice in the pillory, and fined 500 marks; but this writing being dispersed in the army, made such an impression, that it tended not a little to the defection that happened in it afterward. The king's zeal also put him upon sending the earl of Castlemain on a solemn embassy to the pope, in order to reconcile the three nations to the holy see. But Innocent XI. happening to be troubled with a periodical cough, which always seized him when the earl was to have an audience, his lordship threatened to depart; whereupon his holiness very complaisantly sent him word, "that if he had a mind to go, he would advise him to set out early in the morning, and rest at noon; because it was dangerous travelling in that country in the heat of the day." In the beginning of the year 1687, the king sent his declaration into Scotland, suspending by virtue of his sovereign authority, prerogative royal, and absolute power, all laws against the catholics; and, April 4, he published the like declaration for liberty of conscience in England, only not quite in so high a style. He sent mandates to admit Roman Catholics into preferments in the university of Oxford. He did all he could to gain the members of parliament; but not succeeding, he dissolved them on July 2; and finding such a general aversion in the nation to popery and arbitrary power, he never durst venture to call another parliament. On July 3, Ferdinand Dada, who had been about the king's person ever since his accession, being invested with the character of the pope's nuncio in England, made his public entry at Windsor, with all the formality of a popish procession. On January 2, 1687-8, a proclamation was published, that the queen was with child, and ordering a thanksgiving on that account. The king now despairing of every method but force, began to augment his army and fleet, and the new commissions were almost all bestowed on popish officers. He afterwards ordered some entire regiments from Ireland. On April 22, 1688, came out a second declaration for liberty of conscience, which the bishops were ordered to see read in all churches and chapels. Some of the bishops obeyed, and it was read in a few churches, when the congregations generally went out. But the archbishop of Canterbury, and six other bishops, resolved not to obey the order, and went and presented a petition to the king against it. They were upon this, June 8, summoned before the council, and, adhering to their petition, were sent to the tower, privately, as it were, by water; but this did not hinder multitudes flocking to the water-side, desiring their blessing, and applauding and encouraging their constancy. Two days after, June 10, the queen was said to be delivered of a prince (the late pretender.) On June 15, the seven bishops were tried for a libel against the king and government, and were acquitted; upon which an universal joy ran through the nation, and the army shouted for it in the king's hearing. The king was now willing to try how far he could depend upon the army. Beginning with lord Litchfield's regiment, he ordered them to take their arms, and immediately commanded such officers and soldiers as would not contribute to the repeal of the penal laws and test, to lay them down; which they all did, except two captains and a few popish soldiers; at which he was so astonished, that he stood speechless for some time, and then bade them take up their arms again; adding, with a sullen air, that he could not hereafter do them the honour to ask their advice. And now he began to new model the army, by cashiering protestants, and putting papists in their room; but this only disgusted the army the more. The fleet was no better disposed to favour the views of the king; for vice-admiral Strickland attempting to have mass said on board his ship it occasioned such a disturbance among the sailors, that they were with difficulty restrained from throwing the priest overboard. Now the nation began in earnest to think of means for preserving their religion and liberties from being utterly destroyed; and several of the nobility and gentry going abroad, waited on the prince of Orange at the Hague. The prince being invited over, as soon as the king knew it, he appeared in the utmost consternation, abolished the commission for ecclesiastical affairs, took off the bishop of London's suspension, restored the city their charter; but all this came too late; it was evidently the result of necessity, not inclination. When the king heard of the prince's landing, he ordered his army, under the earl of Feversham, to rendezvous on Salisbury plain; but, finding he could not rely on his army, returned to London, and on Dec. 10, at night, left Whitehall in disguise, in order to go to France. At his departure he sent a letter to the earl of Feversham to disband his forces. The king, having embarked on board a small vessel near Feversham, before he could sail, was stopped by a number of fishermen and others, who rifled him, and treated him with great indignity, taking him for a popish priest, and chaplain to Sir Edward Hales, who attended him in his flight. A constable coming on board knew him, and behaved in a very respectful manner. The king finding he was known, was desirous to be gone; but the people brought him as it were by force, to an inn in the town, where he sent for the earl of Winchelsea, who prevailed with him, much against his inclination, to go back to London, where, on Dec. 16, he arrived at Whitehall. The prince of Orange having issued out a declaration for a free parliament, the king, who was at Rochester, dreading the consequences of it, withdrew himself privately about three in the morning, with only the duke of Berwick, his natural son, and two others; he embarked, and with a favourable wind arrived at Ambleteux, in France; from whence he immediately repaired to St. German's, where, after having lost the battle of the Boyne, in Ireland, he passed his days till his death, which happened in 1701. James II. was a prince in whom some good qualities were rendered ineffectual by mistaken notions of the prerogative, excessive bigotry to the religion of Rome, and an inflexible severity of temper. He was brave, steady, resolute, diligent, upright, and sincere, except when warped by religious considerations; yet, even where religion was not concerned, he appears to have been proud, haughty, vindictive, cruel, and unrelenting; and though he approved himself an obedient and dutiful subject, he certainly became one of the most intolerable sovereigns that ever reigned over a free people.

JAMES'S POWDER, *s.* in pharmacy, a medicine much used in intermitting fevers.

To JA'NGLE, *v. n.* [*jangler*, Fr. according to Skinner to quarrel, or bicker in words; to make an untuneable sound.

JA'NGLER, *s.* a quarrelsome, noisy, prattling fellow.

JA'NIZARY, *s.* [Turk.] an order of foot soldiers in the Turkish armies, reputed the foot guards of the grand seignior.

JANNOCK, *s.* [probably a corruption of *bannock*] oat bread. A northern word.

JA'NTY, or JAUNTY, *a.* [corrupted from *gentil*, Fr.] showy; or carelessly adorned.

JA'NUARY, *s.* [*Januarius*, Lat.] the first month of the year, so named from Janus, to whom it was dedicated by the ancient Romans.

JA'NUS, in mythology, a god worshipped by the Romans whose temple was kept open in war, and shut in time of peace.

JAPAN, a large country in the most eastern part of Asia, with the title of an empire. It is composed of several islands, in the principal of which are Niphon and Saikoku

or Saeok. It was discovered by some Portuguese in 1542 being cast upon shore by a tempest. The whole empire is divided into seven principal countries, which are subdivided into 70 provinces. It is the richest country in the world for gold, and the air and water are very good. It produces a great deal of rice, which they reap in September; millet, wheat, and barley, which they get in May. Cedars are common, and so large that they are proper for the masts of ships and columns for temples. They have a large quantity of porcelain, silk, and skins; as also red pearls, which are not less in esteem than the white. In short, Japan is accounted one of the best countries in Asia. The inhabitants are naturally ingenious, and have a happy memory; but their manners are diametrically opposite to those of the Europeans. Our common drinks are cold, and theirs are all hot; we uncover the head out of respect, and they the feet; we are fond of white teeth, and they of black; we get on horseback on the left side, and they on the right; and they have a language so particular that it is understood by no other nation. They value their lives so little, that when a lord makes a feast, the domestics dispute who shall have the honour of cutting open their bellies before the guests. The sciences are highly esteemed among them, and they have several schools at different places. Those they study most are, arithmetic, rhetoric, poetry, history, and astronomy. Some of their schools at Meaco have each 3 or 4000 scholars. They treat the women with a great deal of severity, and punish adultery with death; yet a man may take as many wives as he pleases. On the other hand, brothel-houses are very frequent, and they tolerate sins against nature. Those that have too many children make no scruple of destroying some of them. The Japanese are naturally good soldiers, and skilful at shooting with a bow; however, as they inhabit nothing but islands, they are seldom at war with their neighbours. They formerly carried on a trade with the neighbouring countries; but now all communication with others is forbidden, especially with Christians, for they do not look upon the Dutch to be such. The only Europeans that trade with Japan are the Dutch; and whenever their ships arrive, they take away their guns, sails, and helms, and carry them on shore till they are ready to return back. In the absence of the ships, the factors are shut up in a small peninsula, and are not suffered so much as to have a lighted candle in their houses in the night-time. The merchandises which the Dutch carry to Japan are spices, sugars, silks, linen and woollen cloth, elephants' teeth, and haberdashery wares; for which they receive gold, silver, cabinets, and other japanned and lacquered ware. The Japanese have neither tables, beds, nor chairs; but they sit and lie on carpets and mats, in the manner of the Turks.

JAPA'N, *s.* [from *Japan* in Asia, where this kind of work was originally done] wood varnished and raised in figures, painted in gold and other colours. Figuratively, china, or fine japanned porcelain.

To JAPA'N, *v. a.* to varnish, or embellish with figures glazed with varnish.

JAPA'NNER, *s.* one skilled in varnishing.

To JAR, *v. n.* [from *corre*, anger, Sax.] to strike together with a kind of short rattling; to make a disagreeable harsh tone. Figuratively, to clash, interfere, act in opposition, or be inconsistent; to quarrel or dispute.

JAR, *s.* a disagreeable, harsh, untuneable sound. Figuratively, a quarrel, or state of discord. A *door left a-jar*, is a door left half open. Also an earthen vessel.

JA'RDES, *s.* [Fr.] hard callous tumors in horses, a little below the bending of the ham on the outside. This distemper in time will make the horse halt, and grow so painful as to cause him to pine away, and become light-bellied. It is most common to managed horses, that have been kept too much upon their haunches.

JA'RGON, *s.* [*jargon*, Fr.] inarticulate and unintelligible talk; the use of words without ideas.

JARGONE'LLE, *s.* a species of spear.

JA'SMINE, *s.* [*jasmin*, Fr.] it is commonly pron. *jessamine*; a tree with narrow spear-shaped leaves bearing a white sweet-scented flower.

JA'SPER, *s.* [Heb.] a hard stone resembling the finer marbles and the semi-pellucid gems. It is found in various countries and of different colours, green, white, red, brown yellowish, bluish, and black.

JA'SSY, a well-fortified city of Turkey, the capital of Moldavia, and residence of the hospodar of that country, who is vassal of the grand signior. The inhabitants are chiefly Greeks. It is situated on a branch of the river Pruth, 200 miles E. of Otchakov. Lat. 47. 8. N. lon. 27. 35. E.

IATROLEPTIC, *a.* [from *iatros*, a physician, and *aleipho* to anoint, Gr.] that cures by anointing.

JA'VA, an island in the Eastern Indian Ocean, generally known by the name of Great Java, to distinguish it from Bali, by some named the lesser Java; and is upwards of 600 miles in length, and from 60 to 80 in breadth. The N. coast has a great many commodious creeks, bays, harbours, and towns, with many little islands near the shore. In former times it had as many petty kings as there were large towns; but now it has two kingdoms only; one of which is under the jurisdiction of the king of Mataram, and the other under the king of Bantam. The inhabitants are of a brown complexion, have faces rather flat, short, coal-black hair, large eye-brows, and large cheeks, with small eyes. The men are very robust and strong limbed; but the women are small. The men wear a piece of calico wrapt two or three times round their middle; and the women wear them from their arm-pits down to their knees; but all other parts are bare. Those living near the sea-side are generally Mahometans; but within land they are Gentoos, abstaining from flesh of all kinds. It is a fertile island, producing sugar, and the various tropical fruits; and it has very high mountains. It has likewise impassable forests and wildernesses; but the N. between Batavia and Bantam, is a very populous country, full of rice-fields, and various sorts of wild and tame animals. Here also is plenty of salt, pepper, cassia, wood useful for building, gum benzoin, &c. beside flowering trees and shrubs, and most sorts of fruits proper to the climate. They have also hogs, beeves, and sheep, with other tame creatures; and likewise fowl, both wild and tame, in great abundance, among which are beautiful parroquets, peacocks of an extraordinary size, Bantam fowls, &c. In the woods are large tigers, rhinoceroses, and several other animals unknown in Europe; and in the rivers are crocodiles. The air is as temperate and healthy as any part of the East Indies. The rains, which begin in November, lay the low grounds under water, kill the insects, and continue till the return of May. The coast of the island are mostly under the dominion of the Dutch. Beside the native Javanese, here are Chinese, Malayans, Amboynese, Topasses, Bugasses, Timoreans, and many other people, brought from distant countries by the Dutch. Java lies to the S. E. of the Island of Sumatra, from which it is only separated by the Straits of Sunda. Lat. 5. 45. to 7. 50. S. lon. 104. 20. to 114. 15. E.

To JA'VEL, or JA'BLE, *v. a.* to bemire; to soil over with dirt through unnecessary travelling and traversing. This word is still used in the north of England.

JA'VEL, *s.* a wandering or dirty fellow.

JA'VELIN, *s.* [*javeline*, Fr.] a spear or half-pike, with an iron-pointed head; formerly used either by foot or horse.

JAUNDICE, *s.* [*jaunisse*, Fr.] a distemper from obstructions of the glands of the liver, which prevents the gall being duly separated by them from the blood; and sometimes, especially in hard drinkers, they are so indurated as never after to be opened, and straiten the motion of the blood so much through that viscus, as to make it divert with a force great enough into the gastric arteries, which go off from the hepatic, to break through them, and drain into the stomach; so that vomiting of blood, in this distemper, is a fatal symptom.

JAU'NDICED, *a.* affected with the jaundice.

To JAUNT, *v. n.* [*janter*, Fr.] to wander about.

JAUNT, *s.* a ramble, flight, or excursion.

JAU'NTINESS, *s.* airiness; a loose and careless air; genteelness. See JANTY.

JAW, *s.* the bone in the mouth in which the teeth are fixed. Figuratively the mouth, a term of contempt.

JAY, *s.* [so named from his cry, according to Skinner] a bird about the size of a pigeon, with blue feathers on its wings, and of a kind of light brown or clay colour on its breast.

JA'ZEL, *s.* a precious stone of an azure or blue colour.

IBE'RIA, the antient name of Spain, as well as of Georgia in Asia.

I'BEX, *s.* in zoology, a kind of wild goat with large horns, which inhabits the Alps, Pyrenees, and Carpathian mountains.

IBIJAU, *s.* in ornithology, a Brasilian bird which resembles the goat-sucker.

I'BIS, *s.* a bird very useful to the Egyptians for destroying serpents, locusts, and caterpillars; and, on that account had divine honours paid to it.

ICE, *s.* [*is*, Sax. *eyse*, Belg.] water or other liquor frozen by cold; sugar melted and grown hard afterwards. Ice is lighter than water in consequence of the air bubbles which it contains, thus furnishing an exception to the general law of nature, that bodies become heavier as they grow colder.

To ICE, *v. a.* to freeze water hard; to cover with ice or concreted sugar.

I'CEBERGS, *s.* large bodies of ice filling the valleys between mountains in high northern latitudes.

I'CEHOUSE, *s.* a house in which ice is preserved for use in the hot season.

I'CELAND, a large island to the N. of Europe, about 600 miles in length, and 300 in breadth. For two months together the sun never sets; and in the winter it never rises for the same space, at least not entirely. The middle of the island is mountainous, stony, and barren; but in some places there are excellent pastures, and the grass has a fine smell. The ice, which gets loose from the more northern country in May, brings with it a large quantity of wood, and several animals, such as foxes, wolves, and bears. Mount Hecla is the most noted mountain, and is a volcano, which sometimes throws out sulphureous torrents. Their houses are scattered about at a distance from each other, and many of them are deep in the ground; but they are mostly miserable huts, covered with skins. Many of the natives profess Christianity; but those that live at a distance are Pagans. Some of them are clothed with skins of beasts. The exports are dried fish, salted mutton, beef, butter, train oil, tallow, coarse and fine jackets of Wadmal, woollen stockings and gloves, red wool, sheep skins, sea-horses' teeth, fox tails of several colours, feathers, and quills. The imports are iron, horses' shoes, timber, meal, wine, brandy, tobacco, coarse linen, and domestic utensils. The number of inhabitants is about 50,000. Their language is the old Runic, or Gothic, the vernacular tongue of the Swedes, Danes, and Norwegians, before it branched into the several dialects since spoken by the natives of these three kingdoms. Lat. 63. 15. to 67. 15. N. lon. 16. to 25. W.

I'CE-PLANT, *s.* a very singular and beautiful plant, with a leaf resembling plantain, which is covered with silvery drops. It is a native of Africa.

ICH DIEN, *s.* [*I serve*, from the Teut. or Sax.] the motto of the prince of Wales, formerly that of John king of Bohemia, on his shield, to denote that he was subservient to Philip king of France, whose pay he received; but being slain by Edward the Black Prince, the son of Edward III. he then assumed the motto, to denote his obedience to his father; since which it has always been borne by the prince of Wales.

ICHNEUMON, (*iknéumon*) *s.* [Gr.] in zoology, a kind of large weasel which inhabits Egypt and other parts of Africa, and is much valued for its killing serpents, and destroying the eggs of the crocodile. They are kept in houses and employed as cats are in destroying rats and mice. The *ichneumon fly*, is a fly which is bred in the body of caterpillers, and is so called in allusion to the report that the ichneumon gets down the throat of the crocodile, and eats its way through the crocodile's belly.

ICHNO'GRAPHY, (*iknógrafy*) *s.* [from *ichnos*, a footstep, and *grapho*, to describe, Gr.] in perspective, the view of any thing cut off by a plane parallel to the horizon, just at the bottom of it.

I'CHOR, (*ikor*) *s.* [Gr.] signifies a thin watery humour like serum; but is sometimes also used for a thicker kind, flowing from ulcers, called also sanies.

I'CHOROUS, (*ikorous*) *a.* [from *ichor*, corrupt matter, Gr.] sanious; thin; undigested.

ICHTHYO'LOGY, (*ikthyólogy*) *s.* [from *ichthys*, a fish, and *logos*, a discourse, Gr.] the science of fishes, or that branch of zoology which treats of fishes.

ICHTHYO'PHAGY, *s.* [from *ichthys*, a fish, and *phago*, to eat, Gr.] diet of fish, the practice of eating fish.

I'CICLE, *s.* [from *ice*] a shoot or thread of ice, hanging down from any high place.

I'CINESS, *s.* the state of water grown hard by cold.

I'CKWORTH, a small town of Suffolk, with a market on Friday. It is a small place, and there are the ruins of an antient priory, and several Roman coins have been dug up. It is 23 miles N. W. by N. of Ipswich, and 74 N. N. E. of London.

I'CON, *s.* [from *eiko*, to resemble, Gr.] a picture, resemblance, portrait, or representation; an image.

ICO'NOCLAST, *s.* [from *eikon*, an image, and *klao*, to break, Gr.] a breaker of images; a name which the church of Rome gives to all who reject the religious use of images.

ICONO'LOGY, *s.* [*iconologie*, Fr. from *eikon*, an image, and *logos*, a discourse, Gr.] the science that describes the figures and representations of men and heathen deities with their proper attributes and appendages, as Saturn like an old man with a scythe; Jupiter with a thunderbolt in his hand, and an eagle by his side, &c.

ICTE'RICAL, *a.* [*icterique*, Fr. from *ikteros*, the jaundice, Gr.] affected with the jaundice. Good against the jaundice, applied to medicines.

I'CY, *a.* full of, or covered with ice. Figuratively, cold, applied to the touch. Frosty, applied to the weather. Not warm. Free from passion, applied to the mind.

I'D, contracted for *I would*.

IDE'A, *s.* [from *ido*, to see, Gr.] whatsoever the mind perceives in itself, or is the immediate object of perception, thought, or understanding; the form under which any thing appears to the mind, or the object on which the mind is employed when thinking; a notion. SYNON. *Idea* represents the object; *thought* considers it; *imagination* forms it; thus worked up, it becomes a *notion*. The first only points; the second examines; the third seduces; but the last draws.

IDE'AL, *a.* mental; intellectual; existing in the mind.

IDE'ALLY, *ad.* mentally; in the mind.

IDE'NTIC, or IDE'NTICAL, *a.* [*identique*, Fr.] the same; implying the same thing, or the same idea.

IDE'NTITY, *s.* [*identité*, Fr.] sameness; that by which a thing is itself, or by which it is distinguished from any other.

IDES, *s.* [*ides*, Fr. *idus*, Lat.] a term antiently used to distinguish time: it fell on the 13th of every month, excepting in March, May, July, and October, in which it is the 15th, because in those months it was six days before the nones, but in the others only four.

IDIO'CRASY, *s.* [from *idios*, peculiar, and *krasis*, temperament, Gr.] peculiarity of constitution.

IDIOCRA'TICAL, *a.* peculiar to constitution.

I'DIOCY, *s.* [from *idiotes*, an idiot, Gr.] a defect of understanding. Both idiocy and lunacy excuse from the guilt of crimes.

IDIOSYNCRASY, *s.* [from *idios*, peculiar, *syn*, with, and *krasys*, a disease, Gr.] a disposition or temper peculiar to a person.

I'DIOT, *s.* [*idiota*, Lat. *idiotes*, Gr.] a changeling, or one who has not the use of reason.

I'DIOTISM, *s.* [*idiotisme*, Fr. from *idiotes*, an idiot, Gr.] folly; weakness of understanding, or want of reason.

I'DLE, *a.* [*ydel*, Sax.] lazy; averse to labour, or unemployed, applied to persons. Useless; vain; ineffectual; worthless, applied to things. Trifling, or of no importance, applied to narratives or discourses. *Idle* formerly was used to signify wicked, as in Spenser, where the wicked offers of Mammon are called, "*idle* offers."

To I'DLE, *v. n.* to pass time in laziness, or without employment.

I'DLENESS, *s.* [*idelness*, Sax.] aversion to labour; want of employment.

I'DLER, *s.* a person who passes his time in idleness, or without employment.

I'DLY, *ad.* lazily; in a foolish or trifling manner; without care, attention, or profit. "I *idly* heard." *Shak.* Without effect; in vain.

I'DOL, *s.* [*idole*, Fr. *eidos*, a resemblance, Gr.] an image worshipped as a god; a counterfeit image or resemblance; hence the word *doll*, for a jointed image played with by children. A person loved or respected to adoration. "The people's *idol*." *Denh.*

I. E. an abbreviature for *id est*, Lat. that is; that is to say.

I'DYL, *s.* [from *eidyllion*, a little figure or representation, Gr.] a short poem.

JE'ALOUS, (*jélous*) *a.* [*jaloux*, Fr.] suspicious of not being equally beloved by one whom one loves; suspicious of the sincerity of a married person's affections; fond; emulous; or prosecuting with a kind of rivalship; full of suspicion.

JE'ALOUSLY, (*jélously*) *ad.* in such a manner as to betray suspicion of the sincerity of a lover or married person; extremely cautious, vigilant, or zealous.

JE'ALOUSY, (*jélousy*) *s.* [*jalousie*, Fr.] a state of mind wherein a lover imagines himself not equally beloved, or a married person who suspects the husband or wife not faithful to the marriage bed; a suspicious fear.

JE'DBURGH, a town of Roxburghshire, situated almost in the centre of the county, on the banks of the Jed, and near its confluence with the Teviot, 34 miles S. E. of Edinburgh. It contains near 3000 inhabitants, (including the environs, which belong to the parish,) and is the seat of the law courts for the county.

JE'DDO, or YEDDO, the second capital of Japan in the island of Niphon, where the Dairo, or nominal emperor, resides. The houses are built with earth, and boarded on the outside, to prevent the rain from destroying the walls. In every street is an iron gate, which is shut up in the night, and a kind of custom-house or magazine, to put merchandise in. It is 9 miles in length and 6 in breadth, and contains 1,000,000 inhabitants. A fire happened in 1658, which, in the space of 48 hours, burnt down 100,000 houses, and in which a great number of the inhabitants perished. The emperor's palace was reduced to ashes; but the whole is rebuilt. The royal palace is in the middle of the town, and is defended by walls, ditches, towers, and bastions. Where the emperor resides are three towers, nine stories high, each covered with plates of gold; and the hall of audience is supported by pillars of massy gold. Near the palace are several others, where the relations of the emperor live. The empress has a palace of her own, and there are 20 small ones for the concubines. Besides, all the vassal kings have each a palace in the city, with a handsome garden, and stables for 2000 horses. The generality of the houses are nothing but a ground floor, and rooms are parted by folding screens: so that they can make the rooms larger or smaller at pleasure. Jeddo is well fortified, and is seated in a plain, at the bottom of an extensive gulf or bay; and the river which crosses it is divided into several canals. Lat. 35. 46. N. lon. 139. 30. E.

To JEER, *v. n.* etymology uncertain; to scoff; to mock; to rally; to treat with ridicule.

JE'RSEY, an island in the English Channel, 12 miles from the coast of Normandy in France, and 25 from the coast of

Brittany, subject to the English. It is about 30 miles in circumference, and difficult of access, on account of the rocks, sands, and forts, erected for its defence. It contains 12 parishes; and the chief town is St. Helier, in the S. part of the island. It lies extremely well for trade in time of peace, and to annoy the French privateers in time of war. It is well watered with rivulets, and is pretty well stocked with fruit-trees. They have a noted manufactory for woollen stockings and caps, and are still governed by the antient Norman laws, the courts of England having no jurisdiction here. In 1781, a body of French troops landed on this island, surprised the lieutenant governor, and compelled him to sign a capitulation; but major Pierson, the commander of the English troops, refused to abide by this forced capitulation, and attacked the French in the town of St. Helier. The French were compelled to surrender prisoners of war; but the gallant major was killed in the moment of victory.

JERSEY, one of the United Provinces of N. America; bounded on the W. by Pennsylvania, on the S. by Maryland, on the N. by New York, and on the E. by the ocean; and is about 140 miles in length from N. to S. and 60 in breadth from E. to W. The chief towns are Burlington, Perth-Amboy, and Elizabeth-town. It is divided into E. and W. Jersey; and the produce of both is Indian corn, wheat, pease, beans, barley, oats, horses, black cattle, furs, and pipe-staves. They send to the Caribbee islands bread, corn, salt, beef, pork, and fish; and, in return, receive rum, sugar, and the other produce of those islands. To England they send furs and skins; for which they have furniture and cloths in return.

JERSEY, *s.* [from the island of Jersey, which is famous for spinning of yarn, and its stocking manufacture] a fine woollen yarn.

JERU'SALEM, anciently *Salem* and *Jebus;* among the Greeks and Latins it was known by the name of *Solyma* and *Hierosolyma*, the capital of Judea or Palestine in Asia. It was a very famous city while the Jews inhabited that country; and in its most flourishing state it consisted of four parts, each being inclosed within its own walls. 1. The old city, which stood on Mount Zion, where king David built a palace. 2. The lower city, styled also the Daughter of Zion, as being built after it; where king Solomon's palace stood, also Herod's theatre and amphitheatre, the latter capable of containing 80,000 persons. 3. The new city, mostly inhabited by tradesmen and numbers of merchants, and 4. Mount Moriah, where Solomon's magnificent temple stood. But all this glory has long since been laid in the dust, in exact conformity to our Saviour's prophecy, particularly with regard to the latter, "that one stone of it should not be left upon another." It is now inhabited by Turks, Arabs, Jews, and Christians. It stands on a high rock, with steep ascents upon every side, except to the N. It is almost surrounded with valleys encompassed with mountains, so that it seems to stand in the middle of an amphitheatre. It is about 3 miles in circumference, and includes Mount Calvary, which was formerly without the walls. On this hill is erected a large structure, with a round nave, which has no light but what comes through the top, like the Pantheon at Rome. This is called the Church of the Holy Sepulchre; the chapel of which is cut out of the rock, and lamps are kept constantly burning in it. The Christian pilgrims flock here from various parts, and the inhabitants accommodate them with lodgings and provisions, which is their chief business, and a bashaw, with a guard of janizaries, always resides here to protect them from the insults of the Arabs. Jerusalem is 112 miles S. S. W. of Damascus, and 45 from the Mediterranean Sea. Lat. 31. 55. N. lon. 35. 25. E.

JE'SUITS, or THE SOCIETY of JESUS, a famous religious order in the Romish church, founded by Ignatius Loyola, a native of Guipuscoa, in Spain, who, in the year 1538, assembled ten of his companions at Rome, principally chosen out of the university of Paris, and made a proposal to them to form a new order; when, after many deliberations, it was agreed to add to the three ordinary vows of chastity, poverty, and obedience, a fourth, which was to go into all countries whither the pope should please to send them, in order to make converts to the Romish church. Two years after, Pope Paul III. gave them a bull, by which he approved this new order, giving them a power to make such statutes as they should judge convenient; on which, Ignatius was created general of the order, which in a short time spread over all the countries of the world, to which he sent his companions, while he staid at Rome, from whence he governed the whole society. This society had rendered themselves so obnoxious, during the last two centuries, by their arts and intrigues, that they have been suppressed in all the kingdoms of Europe; in England, in 1604; Venice, in 1606; Portugal, in 1759; France, in 1764; Spain and Sicily, in 1767; and totally suppressed and abolished by pope Clement XIV. in 1773.

JE'SUITS-BARK, or Peruvian bark, a well known medicine, said to have been first brought into practise by the Jesuits of Peru.

JEWEL, *s.* [*jeweelen*, Belg.] in its primary sense, any ornament of great value, generally applied to such as were set with precious stones; a gem or precious stone. Figuratively, applied to persons, to convey an idea of great esteem and affection towards them. *Jewel Office*, an office belonging to the crown, has the charge of weighing and fashioning the king's plate, and delivering it out by warrant from the lord chamberlain. The principal officer is the master of the *Jewel Office*, who has a salary of 450*£*. per annum.

JEWELLER, *s.* one who deals in precious stones.

JEWS, *s.* a name derived from the patriarch Judah, and given to the descendants of Abraham by his eldest son Isaac, who for a long time possessed the land of Palestine in Asia, and are now dispersed through all the nations in the world. They are tolerated in most countries, and the French republic allowed them the rights of citizens.

JEWS-EARS, *s.* a fungus, tough and thin; and naturally, while growing, of a rumpled figure, like a flat and variously hollowed cup. It generally grows on the lower parts of the trunks of elder-trees which are in a decaying state. The common people cure themselves of sore throats with a decoction of it in milk.

JEWS-STONE, *s.* a fossil, being the spine of a very large urchin petrified by lying long in the earth; it receives its

name, from its being found in Syria, which was famous for the residence of Jews.

JEWS-HARP, [of *joue*, Fr. a cheek, and *harp*, from its being held against the cheek] a kind of musical instrument used by the vulgar, made of steel, held against the teeth, and sounded by the motion of a spring, which, when struck by the finger, vibrates against the breath.

INDIA, an extensive region in Asia, which lies between 66 and 108 deg. E. lon. and 8 and 36 deg. N. lat. Under this name is generally understood all the countries which lie S. of Tartary, and extend from the eastern frontiers of Persia to the western coast of China, divided into India within, and India without the Ganges. The moderns have likewise included, under the denomination of the East Indies, the islands of Japan, with all the islands in the Eastern and Indian Oceans, nearly as far as New Holland, and New Guinea. But the name of India is most frequently applied to that country only, which is distinguished in Asia, as well as in Europe, by the name of Hindoostan; and which may be more strictly considered under the three grand divisions of Hindoostan Proper, the Deccan, and the Peninsula. Hindoostan Proper, includes all the countries that lie to the N. of the river Nerbudda, and of the soubahs of Bahar and Bengal. The principal soubahs, or provinces, in Hindoostan Proper, are Agimere, Agra, Cashmere, Delhi, Guzerat, Lahore, Malwa, Moultan, Oude, Rohilcund, Sindy, &c. The term Deccan, which signifies the South, has been extended to the whole region that lies to the S. of Hindoostan Proper; but in its most proper and limited sense, it means only the countries situated between Hindoostan Proper, the Carnatic the Western Indian Sea, and Orissa; namely, the provinces of Candeish, Dowlatabad, Visiapour, Golcondo, and the western part of Behrar. All the tract S. of the Kistna, is generally called the peninsula. The name *India*, by which this country, as far as it was known, is distinguished in the earliest Greek histories, appears to be derived from *Hind*, the name given to it by the antient Persians, through whom the knowledge of the country was transmitted to the Greeks. The word *Hindoostan* is, indeed, entirely of Persian origin, compounded of *Stan*, a *region*, and *Hind*, or *Hindoo*. The whole of Hindoostan may now be said to consist of five principal states, which hold as tributaries, or feudatories, some numerous inferior states. These five principal states are, the British; the Poonah Mahrattas; the Behrar Mahrattas; Nizam Ally, soubah of the Deccan; and the Seiks. The British possessions are Mysore, or the dominions of the late Tippoo Sultan, Bengal, the greater part of Bahar, part of Allahabad, part of Orissa, the Northern Circars, a jaghire in the Carnatic, Baramahal, Dindigul, and some considerable countries to the N. and S. of Calicut, on the coast of Malabar, with Bombay and the island of Salsette. The allies of the British, who may be considered as dependent on them, are the nabob of Oude; the nabob of the Carnatic, including Tanjore, Madura, Tinevelly, and Marrawars; the rajahs of Travancore; and the territory of Cochin. The Indian territory held by England, either in direct subjection, or through the intervention of dependent allies, contains more than 20,000,000 of inhabitants, and yields an annual revenue of 8,000,000*l.* sterling. Exclusive of the Europeans, the inhabitants of Hindoostan are computed at 10,000,000 Mahometans, and 100,000,000 Hindoos. The Mahometans, or Mussulmans, whom the English commonly, but improperly, call Moors, or Moormen, are represented as bearing a very bad character. The Hindoos, or Gentoos, are of a black complexion, their hair long, their persons straight, their limbs neat, their fingers long and tapering, and their countenances open and pleasant. They are divided into different tribes or casts. The four principal tribes are the bramins, soldiers, labourers, and mechanics; and these are subdivided into a multiplicity of inferior distinctions. There are bramins of various degrees, who have the care of religion, or of the administration of the Gentoo law, allotted to them. These priests are held sacred by the Indians or Hindoos. Those who engage in worldly pursuits are generally the worst of all the Gentoos; for, persuaded that the waters of the Ganges will purify them from their sins, and exempted from the utmost rigour of the courts of justice, (under the Gentoo governments,) they run into the greatest excesses. The soldiers are commonly called Rajah-poots; that is, descendants of the rajahs. They readily enter into the service of any that will pay them, and follow wherever he leads. The English have many battalions of them in their employ, under the name of sepoys. The labourers include farmers, and all who cultivate the land. The mechanics include merchants, bankers, and all who follow any trade; these again are subdivided into each particular branch. Besides these, there are the Parians, or Hallachores, who cannot be called a tribe, being rather the refuse or outcasts of the other tribes.

They are a set of poor unhappy people, who are destined to perform the most disagreeable offices of life, bury the dead, and carry away every thing that is polluted. One description of these, or rather the outcasts of these outcasts, the Poulichees, on the Malabar coast, are held in such abomination, that if one of them happens to touch a Hindoo of a superior tribe, the latter does not scruple to draw his sabre, and kill him on the spot; and for so atrocious an act he is not even called to an account. All the different tribes are kept distinct from each other, by insurmountable barriers; they are forbidden to intermarry, to dwell together, to eat with each other, or even to drink out of the same vessel; and if they transgress any of these rules, they are obliged from that instant to join with the Hallachores. The dominion of religion extends here to a thousand particulars, which in other countries are governed by the civil laws, or by taste, custom, or fashion. Their dress, their food, the common intercourses of life, their marriages, and professions, are all under the jurisdiction of religion. The food of the Hindoos is simple, consisting chiefly of rice, ghee, (a kind of imperfect butter,) milk, vegetables, and oriental spices. The warrior cast may eat of the flesh of goats, sheep, and poultry; and other superior cast may eat poultry and fish. Their happiness consists in the solaces of domestic life; and they are taught by their religion, that matrimony is an indispensable duty in every man, who does not entirely separate himself from the world from a principle of devotion. Their religion permits them to have several wives; but they seldom have more than one; and their wives are distinguished by a decency of demeanor, a solicitude in their families, and a fidelity to their vows, which might do honour to human nature in the most civilized countries. The custom of women burning themselves on the death of their husbands, is still practised in Hindoostan. In some parts of India, as the Carnatic, this dreadful custom is accompanied with peculiar horror. It is asserted, that they dig a pit, in which is deposited a large quantity of cumbustible matter, which is set on fire; and the body being let down, the victim throws herself into the flaming mass. In other places, a pile is raised extremely high, and the body, with the wife, is placed upon it, and then the whole is set on fire. In the Code of Gentoo laws, translated by N. B. Halhead, Esq. is the following remarkable passage concerning this practice: "It is proper for a woman, after her husband's death, to burn herself in the fire with his corpse. Every woman, who thus burns herself, shall remain in paradise with her husband threescore and fifty lacks of years, by destiny. If she cannot burn, she must, in that case, preserve an inviolable chastity; if she remain always chaste, she goes to paradise; and if she do not preserve her chastity, she goes to hell." Hindoostan, towards the N. is pretty temperate; but hot towards the S. and it rains almost constantly for three months in the year. Its products are rice, millet, cotton, figs, pomegranates, oranges, lemons, citrons, cocoa-trees, &c. There are mines of gold, silver, and diamonds. Beside domestic animals, here are elephants, rhinoceroses, buffaloes, lions, tigers, leopards, panthers, and monkeys, with camels and dromedaries. Its principal exports are sugar, indigo, saltpetre, silk, cotton, and precious stones; and particularly calicoes, chiutzes, muslins, &c.

INDIANS of NORTH and SOUTH AMERICA, the original natives of these two vast continents. Of the manners of the North American Indians, the reader may have a general idea, by an account of those who inhabit the countries to the E. of the river Mississippi. These consist of 28 different nations; the principal of which are the Cherokees, the Chicasaws, the Choctaws, the Creeks, the Delawares, the Six Nations, the Shawanese, the Hurons, the Illinois, &c. Allowing about 700 to a nation or tribe, they will contain, in all, 20,000 people. The Indians are not born white; and take a great deal of pains to darken their complexion, by anointing themselves with grease, and lying in the sun. They also paint their face, breasts, and shoulders, of various colours, but generally red; and their features are neat, especially those of the women. They are of a middle stature, their limbs clean and straight, and scarcely any crooked or deformed person is to be found among them. In many parts of their bodies they tattoo themselves, or prick in gunpowder on the skin in very pretty figures. Some shave, o pluck the hair off their heads, except a patch about the crown, which is ornamented with beautiful feathers, beads, wampum, and such like baubles; and except the head and eyebrows, they pluck the hair with great diligence from all parts of the body. Their ears are pared and stretched in a thong down to their shoulders. They are wound round with wire, to expand them, and adorned with silver pendants, rings, and bells, which they likewise wear in their noses. Some of them will have a large feather through the cartilage of the nose; and those who can afford it wear a collar of wampum, a silver breastplate, and bracelets on the arms and wrists. A bit of cloth about the middle, a shirt of the English make, on which they bestow innumerable broaches to adorn it, a sort of cloth boot and mockasoons, which are shoes of a make peculiar to the Indians, ornamented with porcupine quills, with a blanket or watch-coat thrown over all, complete their dress at home; but when they go on expeditions, they leave their trinkets behind, and mere necessaries serve them. There is little difference between the dress of the men and women, excepting that a short petticoat, and the hair, which is exceeding black and long, clubbed behind, distinguish some of the latter. They are such expert marksmen, that they will kill birds flying, fishes swimming, and wild beasts running. They are very intelligent people, quick of apprehension, sudden in execution, subtle in business, exquisite in invention, and industrious in action. They are very hardy, bearing heat, cold, hunger, and thirst, in a surprising manner; and yet no people are more addicted to excess in eating and drinking, when it is conveniently in their power. The follies, nay mischief, they commit, when inebriated, are entirely laid to the liquor; and no one will revenge any injury (murder excepted) received from one who is no more himself. Their public conferences shew them to be men of genius; and they have, in a high degree, the talent of natural, or unstudied eloquence. They live dispersed in small villages, either in the woods, or on the banks of rivers, where they have little plantations of Indian corn and roots, not enough to supply their families half the year; and subsist the remainder of it by hunting, fishing, and fowling, and the fruits of the earth, which grow spontaneously in great plenty. Their huts are generally built of small logs, and covered with bark, each one having a chimney, and a door, on which they place a padlock. They mostly lie upon skins of wild beasts, and sit on the ground. They have brass kettles and pots to boil their food. Gourds or calabashes, cut asunder, serve them for pails, cups, and dishes. The accounts of travellers concerning their religion, are various. All agree, that they acknowledge one Supreme God. They adore the Great Spirit, and believe that his care is extended over them; and that 'he puts good into their hearts.' They also believe in a future state; that after death they shall be removed to their friends, who have gone before them, to an elysium, or paradise. Some believe that there is great virtue in feasts for the sick. For this purpose, a young buck must be killed and boiled, the friends and near neighbours of the patient invited, and having first thrown tobacco on the fire, and covered it up close, they all sit down in a ring, and raise a lamentable cry. They then uncover the fire, and kindle it up; and the head of the buck is first sent about, every one taking a bit, and giving a loud croak, in imitation of crows. They afterward proceed to eat all the buck, making a most harmonious, melancholy song; in which strain their music is particularly excellent. Some nations abhor adultery, do not approve of a plurality of wives, and are not guilty of theft; but there are other tribes that are not so scrupulous. Among the Chicasaws, a husband may cut off the nose of his wife, if guilty of adultery; but men are allowed greater liberty. This nation despises a thief. Among

the Cherokees they cut off the nose and ears of an adulteress; afterward her husband gives her a discharge. Their form of marriage is short; the man, before witnesses, gives the bride a deer's foot, and she, in return, presents him with an ear of corn, as emblems of their several duties. The women are very slaves, in many instances, to the men; in others, they are upon an equal footing, deliberating in the public assemblies, and, in private life, enjoying the privilege of declaring their affection, or paying their addresses, to those they love. Sometimes their prisoners are destined to be tortured to death, in order to satiate the revenge of their conquerors. When the fatal sentence is intimated to them, they receive it with an unaltered countenance, raise their death-song, and prepare to suffer like men. The victors assemble as to a solemn festival, resolved to put the fortitude of the captives to the utmost proof. A scene ensues, the bare description of which is enough to chill the heart with horror. The prisoners are tied naked to a stake, but so as to be at liberty to move round it. All present, men, women, and children, fall upon them with knives and other instruments; and such is their cruel ingenuity in torturing, that, by avoiding to touch the vital part, they often prolong the scene of anguish for several days. In spite of all their sufferings, the victims continue to chant their death-song with a firm voice, they boast of their own exploits, they insult their tormentors for their want of skill to avenge the death of their friends and relations, they warn them of the vengeance that awaits them on account of what they are now doing, and excite their ferocity by the most provoking reproaches and threats. Weary, at length, with contending with men, whose constancy they cannot vanquish, some chief puts a period to their sufferings, by dispatching them with his dagger or his club. The people of S. America gratify their revenge in a manner somewhat different, but with the same unrelenting rancour. Their prisoners, after meeting, at their first entrance, with the same rough reception as among the N. Americans, are not only exempt from injury, but treated with the greatest apparent kindness, feasted, and caressed. But, by a refinement of cruelty, while they seem studious to attach their captives to life, their doom is irrevocably fixed. On an appointed day, the victorious tribe assembles, the prisoner is brought forth with great solemnity, he meets his lot with undaunted firmness, and is dispatched with a single blow. The moment he falls the women seize the body, and dress it for the feast. They besmear their children with the blood, in order to kindle in their bosoms a hatred of their enemies, and all join in feeding upon the flesh with amazing greediness and exultation. The Indians of S. America, immediately under the Spanish government, although the most depressed order of men in the country which belonged to their ancestors, are now far from being treated with that rigour and cruelty which was laid to the charge of the first conquerors of that continent. They are no longer considered as slaves; on the contrary, they are reputed as freemen, and entitled to the privileges of subjects.

INDIES WEST, the name given to a great number of islands in the Atlantic Ocean, which extend from the N. W. extremity of the Bahama Islands, off the coasts of Florida, in lat. 27. 45. N. in a south-easterly direction, to the island of Tobago, which is 120 miles from the coast of Terra Firma, in 11. deg. 30. min. N. lat. They lie between 59 and 86 deg. W. lon. Cuba being the most western and Barbadoes the most eastern of all these islands. When Christopher Columbus discovered them, in 1492, he considered them as part of those vast regions in Asia, comprehended under the general name of India, to reach which, by a course due W. across the Atlantic Ocean, had been the grand object of his voyage: and this opinion was so general, that Ferdinand and Isabella, king and queen of Castile, (in their ratification of their agreement granted to Columbus upon his return,) gave them also the name of *Indies*. Even after the error which gave rise to this opinion was detected, and the true position of the New World was ascertained, the name has remained, and the appellation of the *West Indies* is still given to these islands, and that of *Indians* to the inhabitants, not only of the islands, but of the two continents of America. They are likewise called the Caribbee Islands, from the aborigines of the country; and the sea in which they lie, is sometimes called by modern geographers, the Archipelago of the Caribbees. By the French they are called the Greater and Less Antilles; the Greater comprehending Cuba, St. Domingo, Jamaica, and Porto Rico; and the Less, Aruba, Curaçoa, Bonair, Margaretta, and some others, near the coast of Terra Firma. Foreign geographers, however, are not agreed as to the meaning or application of the word, some applying it to the Caribbee Islands in general. Nautical men distinguish them, from the different courses taken by ships, into the Leeward and Windward Islands. The name of the Caribbees should properly be confined to the smaller islands, which lie between Porto Rico and Tobago. These were inhabited by the Caribbees, a hardy race of men, nowise resembling their feeble and timid neighbours in the larger islands. Even in later times, they have made a stout resistance in defence of the last territory (the island of St. Vincent) which the rapacity of their invaders had left in their possession. The reader will find most of these islands treated of separately.

I'NGRIA, a province of the Russian empire, which now forms the government of St. Petersburgh. It is bounded on the N. by the river Neva, and the Gulf of Finland, on the E. and S. by the government of Novogorod and that of Pleskow, and on the W. by the Gulf of Finland and the govern-

ments of Esthonia and Riga. It is about 130 miles long and 50 broad. The Czar Peter the Great wrested it from the Swedes, and it was confirmed to him by the treaty of Nystadt, in 1721. At that time the inhabitants of the flat country were a Finnish people, but little different from the Fins of Carelia, as to their language and manners. They were called Ischortzi from the river Ischora, which runs into the Neva. Ingria did not retain its antient Swedish privileges; on the contrary, Peter made a present of one part of the Ischortzi to certain Russian nobles; who, on their side, were obliged to people the less cultivated cantons of Ingria, with colonies of Russians from their estates; and thence it is, that we often see a village of Russians surrounded by villages of Fins. Before the conquest of this country the Ingrians had Lutheran preachers for every canton; but numbers of them have since conformed to the profession of the Greek faith. The country abounds with various wild animals, particularly rein deer.
